## 2300 SERIES DUAL CONDUCTOR CORDS

3M™ Dual Conductor Ground Cord is part of a personnel ground monitoring system. The 3M™ Workstation Monitors Models 724, 725, and 790 use a dual conductor type wrist strap system consisting of a dual conductor wristband and ground cord. The dual system allows for a monitored loop resistance measurement, which includes the wristband contact to the wearer and a redundant grounding path. If one conductor of the system fails, the other can still function maintaining the grounding of the person. As a result, this prevents static from being generated by the person, eliminating possible exposure to static-sensitive electronic components. The 2300 series are compatible with all existing 3M dual conductor fabric, metal, and thermoplastic wristbands.
