

ACTEL FPGAs

This product is RoHS compliant.

IGLOO nano The industry's lowest power, smallest size solution

Actel's IGLOO nano products offer groundbreaking possibilities in power, size, lead-times, operating temperature, and cost. Available in logic densities from 10,000 to 250,000 gates, the 1.2 V to 1.5 V IGLOO nano devices have been designed for high-volume applications where power and size are key decision criteria. IGLOO nano devices are perfect ASIC or ASSP replacements, yet retain the historical FPGA advantages of flexibility and quick time-to-market in low-power and small footprint profiles.

IGLOO SILVERCHIP

IGLOO PLUS FPGAs

I/O-optimized family features industry's best power-, area-, logic- and feature-per-I/O ratios

Actel's IGLOO PLUS products deliver unrivaled low-power and I/O features in a feature-rich programmable device, offering up to 64 percent more I/Os than the award-winning IGLOO products and supporting independent Schmitt trigger inputs, hot-swapping, and Flash*Freeze bus hold. Ranging from 30,000 to 125,000 gates, the 1.2 V to 1.5 V IGLOO PLUS devices have been optimized to meet the needs of I/O-intensive, power-conscious applications that require exceptional features.

IGLOO PLUS

ProASIC3 FPGAs

The low-power, low-cost FPGA solution

Actel's third generation flash-based family, ProASIC3 FPGAs, offer a breakthrough in price, performance, density and features for today's most demanding high-volume, value-based applications, including automotive and consumer. The single-chip, reprogrammable, low-power ProASIC3 devices support 15,000 to 3,000,000 gates and up to 620 high-performance I/Os.

ProASIC3

ProASIC3 nano

The lowest cost solution with enhanced I/O capabilities

Actel's innovative ProASIC3 nano devices bring a new level of value and flexibility to high-volume markets. When measured against the typical project metrics of performance, cost, flexibility, and time-to-market, ProASIC3 nano devices provide an attractive alternative to ASICs and ASSPs in fast-moving or highly competitive markets. Customer-driven total system cost reduction was a key decision criteria for the ProASIC3 nano program. Reduced device cost, availability of known good die, a single-chip implementation, and a broad selection of small footprint packages, all contribute to lower total system costs.
