20MHz to 134MHz Spread-Spectrum Clock Modulator for LCD Panels

General Description

The DS1081L is a spread-spectrum clock modulator IC that reduces EMI in high clock-frequency-based, digital electronic equipment.

Using an integrated phase-locked loop (PLL), the DS1081L accepts an input clock signal in the range of 20MHz to 134MHz and delivers a spread-spectrum modulated output clock signal. The PLL modulates, or dithers, the output clock about the center input frequency at a pin-selectable magnitude and dither rate, allowing direct EMI control and optimization. In addition, through an enable pin the dithering can be enabled or disabled for easy comparison of system performance during EMI testing. This same input pin also allows the DS1081L output to be three-stated.

By dithering the system clock, all the address, data, and timing signals generated from this signal are also dithered so that the measured EMI at the fundamental and harmonic frequencies is greatly reduced. This is accomplished without changing clock rise/fall times or adding the space, weight, design time, and cost associated with mechanical shielding.

The DS1081L is provided in an 8-pin TSSOP package and operates over a full automotive temperature range of -40°C to +125°C.

Features

- **Modulates a 20MHz to 134MHz Clock with Center Spread-Spectrum Dithering**
- **Selectable Spread-Spectrum Modulation Magnitudes of:**
  - **±0.5%**
  - **±1.0%**
  - **±1.5%**
  - **±2.0%**
- **Low 75ps Cycle-to-Cycle Jitter**
- **Spread-Spectrum Disable Mode**
- **Pin Compatible with Alliance/PulseCore Semiconductor P2040 Series Devices**
- **Clock Output Disable**
- **Low Power Consumption**
- **3.3V Single Voltage Supply**
- **-40°C to +125°C Temperature Range**
- **Small 8-Pin TSSOP Package**

Detailed Description

The DS1081L modulates an input clock to generate a center-dithered spread-spectrum output. A 20MHz to 134MHz clock is applied to the CLKIN pin. An internal PLL dithers the output clock about its center frequency at a user-selectable magnitude.

Spread-Spectrum Dither Magnitude

The DS1081L can generate dither magnitudes up to ±2%. The desired magnitude is selected using input pins SMSEL1 and SMSEL2 as shown in Table 1.

Table 1. Spread-Spectrum Dither Magnitude

SMSEL2	SMSEL1	MAGNITUDE
0	0	±2.0%
0	1	±1.5%
1	0	±1.0%
1	1	±0.5%

Spread-Spectrum Dither Rate

The output spread-spectrum dither rate is determined by the input frequency to maximize EMI reduction and to ensure that the dither rate is always above the audio frequency range. The user must configure CRSEL, based on Table 2, depending on the input frequency (f_{IN}) so that the appropriate dither rate is programmed.

Table 2. Spread-Spectrum Dither Rate

CRSEL	CLKIN RANGE	DITHER RATE
0	66MHz to 134MHz	$f_{IN}/2048$
Open	33MHz to 80MHz	$f_{IN}/1024$
1	20MHz to 38MHz	$f_{IN}/512$

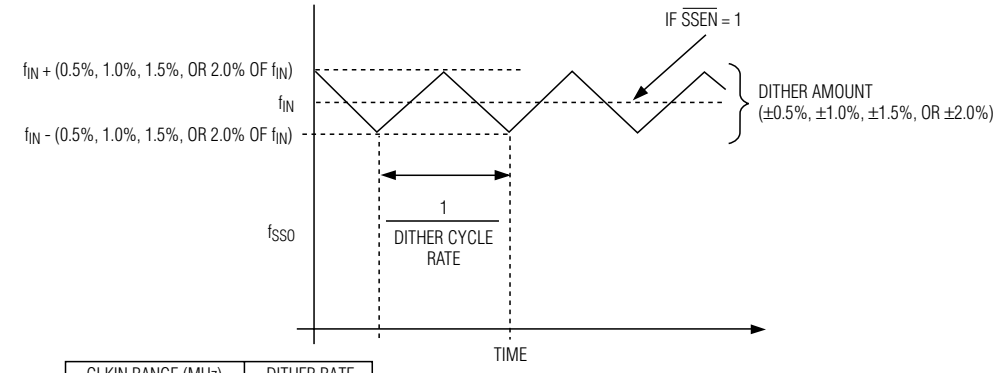
Spread-Spectrum Enable

On power-up, the output clock (SSO) remains three-stated until the internal PLL reaches a stable frequency. The $\overline{SSEN}$ input can be used to disable the spread-spectrum modulation and to three-state the SSO output. If the $\overline{SSEN}$ pin is pulled high, the spread-spectrum modulation is turned off, but the device still uses the internal PLL to generate the clock signal at SSO. If the $\overline{SSEN}$ pin is open, the output is three-stated.

Applications Information

Power-Supply Decoupling

To achieve best results, it is highly recommended that a decoupling capacitor is used on the IC power-supply pins. Typical values of decoupling capacitors are 0.01µF and 0.1µF. Use a high-quality, ceramic, surface-mount capacitor, and mount it as close as possible to the V_{CC} and GND pins of the IC to minimize lead inductance.



CLKIN RANGE (MHz)	DITHER RATE
66 TO 134	$f_{IN}/2048$
33 TO 80	$f_{IN}/1024$
20 TO 38	$f_{IN}/512$

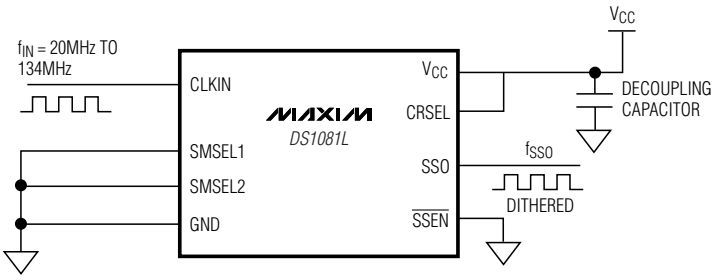
Typical Operating Circuit



NOTE: IN THE ABOVE CONFIGURATION WITH SMSEL1, SMSEL2, AND $\overline{SSEN}$ CONNECTED TO GND AS WELL AS CRSEL CONNECTED TO V_{CC} AND SSEN CONNECTED TO GND, THE DEVICE IS CONFIGURED WITH A SPREAD-SPECTRUM MAGNITUDE OF ±2.0%, AND ALLOWS A CLKIN BETWEEN 20MHz and 38MHz.
