

DC FILTERING

FFLI 800V to 1400Vdc* RoHS Compliant

The FFLI series is specifically designed for DC filtering applications such as DC link. This range offers solutions for voltage from 800V up to 1400V.

The Controlled Self Healing Technology, essential to ensure a safe and reliable behaviour, is achieved using a fully dry solution with polypropylene metallized and segmented film. Standard designs proposed in this catalogue are covering a wide range of voltage and capacitance values.

In case of specific requirements about shape and performances, please feel free to contact your local AVX representative.

PACKAGING MATERIAL

Aluminium cylindrical case filled polyurethane resin.

Self extinguishing polyurethane resin (V0 : in accordance with UL94)

Self extinguishing plastic cover (V0 : in accordance with UL94)

RoHS components

M6/10 Female connections or M8/20 Male connections

STANDARDS

IEC 61071: Power electronic capacitors

IEC 61881: Railway applications, rolling stock equipment, capacitors for power electronics

IEC 60068-2: Environmental testing

IEC 61373: Shock and vibrations

UL 94: Fire requirements

JE = Female Threaded

RoHS COMPLIANT

DEFINITIONS

C_n (μF)	capacitance	nominal value of the capacitance measured at $\theta_{amb} = 25 \pm 10^\circ\text{C}$
U_n (V)	rated DC voltage	maximum operating peak voltage of either polarity (non-reversing type waveform), for which the capacitor has been designed for continuous operation
U_w (V)	working voltage	value of the maximum operating recurrent voltage for a given hot spot temperature and an expected lifetime
U_r (V)	ripple voltage	peak-to-peak alternating component of the unidirectional voltage
L_s (nH)	parasitic inductance	capacitor series self-inductance
R_s (mΩ)	series resistance	capacitor series resistance due to galvanic circuit
I_{rms} (A)	RMS current	RMS current value for continuous operation under natural convection generating 40°C overheating
θ_{amb} (°C)	cooling air temperature	temperature of the cooling air measured at the hottest position of the capacitor, under steady-state conditions, midway between two units NOTE If only one unit is involved, it is the temperature measured at a point approximately 0.1 m away from the capacitor container and at two-thirds of the height from its base
θ_{hs} (°C)	hot spot temperature	highest temperature obtained inside the case of the capacitor in thermal equilibrium
I²t (A ² s)	integral of action	maximum repetitive integral of action that galvanic circuit is able to withstand

CHARACTERISTICS

Capacitance range C _n	105μF to 3000μF
Tolerance on C _n	$\pm 10\%$
Rated DC voltage U _n	800 to 1400V
Lifetime at U _n and 65°C hot-spot temperature and $\Delta C / C < 2\%$	100,000h
Parasitic inductance L _s	35 to 60nH
Maximum rms current I _{rms}	up to 112A _{rms}
Test voltage between terminals @ 25°C	1.5 x U _n for 10s
Test voltage between terminals and Case @ 25°C	4kVrms @ 50Hz for 10s
Dielectric	polypropylene
Climatic Category	40 / 95 / 56 (IEC 60068)
Working temperature	-40°C / +95°C (according to the power dissipated)
Storage temperature	-40°C / +85°C
Calorific value	40 MJ/kg

The Important Information/Disclaimer is incorporated in these specifications by reference and should be reviewed in full before placing any order.

DC FILTERING

FFLI 800V to 1400Vdc* RoHS Compliant

LIFETIME EXPECTANCY VS HOT SPOT TEMPERATURE AND VOLTAGE

HOW TO CHOSE THE RIGHT CAPACITOR

The capacitor lifetime depends on the working voltage and the hot spot temperature.

Our caps are designed to meet 100000 hours lifetime at rated voltage and 65°C hot spot temperature. In accordance with operating conditions, please calculate the hot spot temperature and deduce from this calculation if the obtained lifetime can suit the application.

1. From the tables, select a capacitor with required capacitance

C_n and voltage U_n

Calculate the maximum ripple voltage allowed for the selected cap:

$$U_{rmax} = 0.2U_n$$

If $U_r > U_{rmax}$, select a capacitor with higher rated voltage

Make sure I_{rms} application < I_{rms} table

Copy out:

- serial resistance (Rs): see table of values
- thermal resistances Rth

2. Hot spot temperature calculation

Total losses are calculated as follow: $P_t = P_j + P_d$

Joule losses: $P_j = R_s \times I_{rms}^2$

Dielectric losses: $P_d = Q \times \tan \delta_0$ with

- $Q(\text{reactive power}) = \frac{I_{rms}^2}{C\omega}$ for a sinusoidal waveform

- $\tan \delta_0 = 2 \times 10^{-4}$ (dielectric losses of polypropylene)

Hot spot temperature will be:

$$\theta_{HS} = \theta_{amb} + (P_j + P_d) \times R_{th}$$

θ_{HS} **absolute maximum is 95°C**

If temperature is higher than 95°C, come back to #1 and start again with another selection.

R_{th} : thermal resistance between case and ambient air

DC FILTERING

FFLI 800V to 1400Vdc* RoHS Compliant

3. Refer to the curve and deduce the lifetime vs U_w/U_n ratio

eg: rated voltage 1000V
working voltage 1050V
 $\rho = 1.05 \Rightarrow$ lifetime 50,000 hours
@ 65°C hot spot temperature

Please, find a calculation form at the end of the catalog

MTBF CALCULATION

Based on Return Of Experience from the field of more than 30 years, we have established the following relation. The failure rate λ_B depends on hot spot temperature θ_{HS} and charge ratio ρ .

$$\rho = U_w/U_n$$

$$\lambda_B = 3 \times 10^{2.75(\rho-1)} \times e^{\left(3.2 \left(\frac{\theta_{HS}+273}{358}\right)^{30}\right)} \times 10^{-9} \text{ in failures/hour}$$

GENERAL FAILURE RATE

$\lambda = \lambda_B \times \pi_Q \times \pi_B \times \pi_E$ failures/hour • π_Q , π_B and π_E see following tables

Qualification	Qualification factor π_Q
Product qualified on IEC61071 and internal qualification	1
Product qualified on IEC61071	2
Product answering on another norm	5
Product without qualification	15

Environment	Environment factor π_E
On ground (good conditions)	1
On ground (fixed materials)	2
On ground (on board)	4
On ship	9
On plane	15

Environment	Environment factor π_B
Favorable	1
Unfavourable	5

MEAN TIME BETWEEN FAILURE (MTBF)

$$MTBF = 1/\lambda \text{ hours}$$

SURVIVAL FUNCTION

$$N = N_0 \times \exp(-\lambda t)$$

N is the number of pieces still working after t hours.

N_0 is the number of pieces at the origin ($t = 0$)

FAILURE MODE

Main failure mode due to AVX's **Controlled Self-Healing Technology** is only losses of capacitance. Thanks to **Controlled Self-Healing solution** to interrupt self-healing process in order to prevent avalanche effect due to polypropylene molecular cracking producing gas and potential explosion in confined box for none **Controlled Self-Healing capacitors**.

The Important Information/Disclaimer is incorporated in these specifications by reference and should be reviewed in full before placing any order.

DC FILTERING

FFLI 800V to 1400Vdc* RoHS Compliant

DIMENSIONS

D (mm)	75	85	100	116

100	55	34	59	57
116	55	34	67	65

MECHANICAL MOUNTING

Capacitors enclosure presents a M12 x 16 bolt in order to fix the capacitor. Over height (H) more than 1.5 x D (diameter of tube), we recommend to clamp (constraint < 35daN), just below the plastic cover, the capacitor in order to limit oscillations in case of potential Shock&Vibration stress.

DC FILTERING

FFLI 800V to 1400Vdc* RoHS Compliant

CALCULATION FORM SPECIFICATION

Capacitance	C (μF)	
Working voltage	U _w (V)	
Rms current	I _{rms} (A _{rms})	
Frequency	f (Hz)	
Ripple voltage	U _r (V)	
Ambient temperature	θ _{amb} (°C)	
Lifetime @ U _w , I _{rms} and θ _{amb}	hours	
Parasitic inductance	L (nH)	
Cooling conditions		

Your choice

PN		
Capacitance	C (μF)	
Rated voltage	U _n (V)	
Serial resistance	R _s (mΩ)	
between hot spot and case	R _{th} (°C/W)	

CALCULATIONS

Maximum ripple voltage	U _{rmax} = 0.2 U _n	U _{rmax} = V
The maximum ripple voltage of the selected capacitor must be in any case higher than the ripple voltage of your application		
Ratio U _w /U _n	ρ = U _w /U _n	ρ =
Joule losses	P _j = R _s × I _{rms2}	P _j = W
Dielectric losses	P _d = Q × tgδ0 = Q × 2.10 ⁻⁴	P _d = W
Hot spot temperature	θ _{HS} = θ _{amb} + (P _j + P _d) × R _{th}	θ _{HS} = °C
The hot spot temperature must be in any case lower than 95°C		

LIFETIME EXPECTANCY VS HOT SPOT TEMPERATURE AND VOLTAGE

Expected lifetime at hot spot calculated and U = U _w

IMPORTANT INFORMATION/DISCLAIMER

All product specifications, statements, information and data (collectively, the “Information”) in this datasheet or made available on the website are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on AVX’s knowledge of typical operating conditions for such applications, but are not intended to constitute and AVX specifically disclaims any warranty concerning suitability for a specific customer application or use.

ANY USE OF PRODUCT OUTSIDE OF SPECIFICATIONS OR ANY STORAGE OR INSTALLATION INCONSISTENT WITH PRODUCT GUIDANCE VOIDS ANY WARRANTY.

The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by AVX with reference to the use of AVX’s products is given without regard, and AVX assumes no obligation or liability for the advice given or results obtained.

Although AVX designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Unless specifically agreed to in writing, AVX has not tested or certified its products, services or deliverables for use in high risk applications including medical life support, medical device, direct physical patient contact, water treatment, nuclear facilities, weapon systems, mass and air transportation control, flammable environments, or any other potentially life critical uses. Customer understands and agrees that AVX makes no assurances that the products, services or deliverables are suitable for any high-risk uses. Under no circumstances does AVX warrant or guarantee suitability for any customer design or manufacturing process.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
