HTF3000LF PVH-3.3

TEMPERATURE AND HUMIDITY MODULE

Compliant with RoHS recommendations

Based on the rugged HS1101LF humidity sensor, HTF3000LF PVH-3.3 is a dedicated humidity and temperature transducer designed for OEM applications where a reliable and accurate measurement is needed. It features a very small size for easy, cost-effective mechanical mounting. Direct interface with a micro-controller is made possible with the module's linear frequency output.

MAIN FEATURES

- **One of the smallest humidity / temperature modules on the market**
- **Compliant with RoHS regulation and most of Lead Free Soldering Process**
- **Stable, proportional frequency output from 0 to 100% RH**
- **Calibrated within +/- 3% RH @ 55% RH at 3.30 VDC**
- **High quality thermistor**
- Stable characteristics with temperature
- High reliability and long term stability

HUMIDITY SENSOR SPECIFIC FEATURES

- **Instantaneous de-saturation after long periods in saturation phase**
- **Fast response time**
- **High resistance to chemicals**
- Not affected by water immersion
- Part could be washed with distilled water
- Patented solid polymer structure

TEMPERATURE SENSOR SPECIFIC FEATURES

- **10 kΩ+/- 1% NTC temperature sensor**
- Stable
- High sensitivity

Typical temperature output

Depending on the needed temperature measurement range and associated accuracy, we suggest two methods to access to the NTC resistance values.

① $R_T = R_N * e^{B\left(\frac{1}{T}-\frac{1}{T_N}\right)}$

R_T	NTC resistance in Ωat temperature T in K
R_N	NTC resistance in Ωat rated temperature in K
T, T_N	Temperature in K
B	B value,material-specific constant of the NTC thermistor
e	Base of natural logarithm (e =2.71828)

The actual characteristic of an NTC thermistor can, however, only be roughly described by the exponential relation,as the material parame ter B in reality also depends on temperature. So this approach is only suitable for describing a restricted range around the rated temperature or resistance with sufficient accuracy.

② For practical applications a more precise description of the real R/T curve may be required. Either more complicated approaches (e.g the Steinhart-Hart equation) are used or the resistance/ temperature relation as given in tabulated form. The below table has been experimentally determined with utmost accuracy for temperature increments of 1 degree.

QUALIFICATION PROCESS

Resistance to physical and chemical stresses

- ⇨ HTF3000LF PVH-3.3 has passed through qualification processes of MEAS FRANCE including vibration, shock, storage, high temperature and humidity
- ⇨ Additional tests under harsh chemical conditions demonstrate good operation in presence of salt atmosphere, SO2 (0.5%, H2S (0.5%), 03, NOx, NO, CO, CO2, Softener, Soap, Toluene, acids (H2SO4, HNO3,HCl), HMDS, Insecticide, Cigarette smoke,….
- ⇨ ESD : HTF3000LF PVH-3.3 is able to sustain a minimum of ±8KV (contact discharge)
