# 1 Introduction

## 1.1 General Description

Nano LANReach™ is a secure serial-to-LAN device server module that also acts as a bridge to connect serial devices to 10/100 Mbit Ethernet LANs. It includes the iChip™ CO2144 IP Communication Controller™ chip and with a 10/100BaseT Ethernet Phy. It is packaged in RoHS-compliant ultra-slim form factor and uses an industry standard pin-out.

Nano LANReach offers much more than many other device servers on the market. It acts as a security gap between the application and the network; supports up to 10 simultaneous TCP/UDP sockets; two listening sockets; a web server with two websites; SMTP and POP3 clients; MIME attachments; FTP and TELNET clients, and SerialNET™ mode for serial-to-IP bridging.

Nano LANReach supports the SSL3/TLS1 protocol for secure sockets, HTTPS and FTPS.

Nano LANReach minimizes the need to redesign the host device hardware. It easily inserts into headers on the host PCB and connects to an external antenna. Minimal or no software configuration is needed for Nano LANReach to access the LAN.

Connect One's high-level AT+i™ API eliminates the need to add security and networking protocols and tasks to the host application. The AT+i SerialNET operating mode offers a true plug-and-play mode that eliminates any changes to the host application.

Nano LANReach firmware – the IP stack and Internet configuration parameters – are stored in an external flash memory. The module is power-efficient: the core operates at 1.2V, while I/Os operate at 3.3V.

The II-EVB-363MW evaluation board provides an easy environment for testing the Nano LANReach prior to designing it into your product.

## 1.2 Hardware Description

Size: 35.0 x 24.88 x 17.4 mm

Core CPU: Connect One Co2144, low-leakage, 0.13 micron, running at 48MHz

Operating Voltage: +3.3V+/-10%

Operating Humidity: 90% maximum (non-condensing)

Operating Temperature Range:  
-40° to 85°C (-40° to 185°F)

Power Consumption: 130mA (typical)

- Connector: Low profile 30 pin
- Host Interface: TTL Serial, SPI and USB device.
- 10/100BaseT Ethernet

RoHS-compliant; lead-free

## 1.3 Performance Specifications

Host Data Rate: up to 3Mbps in serial mode

Serial Data Format (AT+i mode):

Asynchronous character; binary; 8 data bits; no parity; 1 stop bit

SerialNET mode: Asynchronous character; binary; 7 or 8 data bits; odd, even, or no parity; 1-2 stop bits

Flow Control: Hardware (-RTS, -CTS) and software flow control.

**Internet Protocols**

ARP, ICMP, IP, UDP, TCP, DHCP, DNS,  
NTP, SMTP, POP3, MIME, HTTP, FTP and  
TELNET

**Security Protocols**

SSL3/TLS1, HTTPS, FTPS, RSA,  
AES-128/256, 3DES, RC-4, SHA-1, MD-5

**Protocols Accelerated in HW**

AES, 3DES and SHA

**Application Program Interface**

Connect One's AT+i protocol  
SerialNET mode for transparent serial data-to-  
Internet bridging

**Warranty**

One year

**Certifications**

FCC and CE pending

**Installation Requirements**

The Nano LANReach must be installed within  
a full-enclosure device that is safety certified.

## 2 Features

### 2.1 Protocols

- Up to 10 simultaneous TCP/UDP sockets and two listening sockets
- HTTP/HTTPS client
- HTTP/HTTPS web server with two on-chip websites: configuration site and application site
- FTP and TELNET clients
- DHCP client and server
- PPP Host Interface
- Sending and receiving textual email and binary email with MIME attachments

### 2.2 Security

- Acts as a security gap between the host application and the network
- One secure SSL3/TLS1 socket
- Supports multiple Certificate Authorities and both client-side and server-side authentication
- Secure FTP (over SSL3) and HTTPS clients
- Includes a true hardware random number generator
- AES, 3DES and SHA accelerated in hardware

### 2.3 Additional Features

- Non-volatile, on-chip operational parameter database
- SerialNET mode for serial-to-IP bridging (port server mode)
- Local firmware update
- Remote configuration and firmware update over the Internet
- Retrieval of time data from a Network Time Server

**Note:** For a detailed description of all available features, see the *AT+i Programmer's Manual*.

## 3 Typical Applications

- Add IP communications over LAN to serial embedded devices.
- Seamlessly replace a dialup or cellular connection with a LAN connection.
- Add SSL security to M2M solutions.
- Pin compatible with the Nano WiReach allowing an easy switch between LAN and WiFi.

### **Nano LANReach supports several operational modes:**

- **SerialNet™ Serial to LAN Bridge** - allowing transparent bridging of Serial over LAN, using a 3Mbps fast UART. This is a true plug-and-play mode that eliminates any changes to the host application.
- **PPP modem emulation** – allowing existing (i.e. modem) designs currently using PPP to connect transparently over LAN.
- **Full Internet Controller mode** – allowing simple MCU to use the Nano LANReach's rich protocol and application capabilities to perform complex Internet operations such as E-mail, FTP, SSL, embedded Web server and others. It also acts as a firewall, providing a security gap between the application and the network.

## 4 J6 Connector Pin Description

The Nano LANReach module includes the iChip CO2144 IP Communication Controller and 10/100 Ethernet Phy with magnetics mounted on a socket form-factor module.

### 4.1 Pin Numbers

Connector: Molex [53748-0308](#)

Mate with: Molex [52991-0308](#)

## 4.2 J6 Pin Functional Description

Pin	Signal	type	Description
1	V <sub>DD</sub>	Power	
2	GND	power	
3	RXD0	Input	UART 0 receive
4	TXD0	Output	UART 0 transmit
5	nCTS0	Input	UART 0 clear to send
6	nRTS0	Output	UART 0 request to send
7	DATA_RDY	Output	Data ready
8	MSEL	Input	Mode select
9	nRESET	Input	Reset Module. At Least 10mSec pulse
10	ACT_LINK	Output	LAN Link LED indicator
11	nSPI1_CS	Input	SPI 1 chip select for host
12	SPI1_CLK	Input	SPI 1 clock for host (Max 12MHz)
13	SPI1_MISO	Output	SPI 1 slave out for host master in
14	SPI1_MOSI	Input	SPI 1 slave in for host master out
15	SPI1_INT	Output	SPI 1 have data on his buffer
16	Readiness	Output	iChip Ready
17	DDP	Analog	USB device positive
18	DDM	Analog	USB device negative
19	VDD	Power	
20	GND	Power

## 5 Interfaces

### 5.1 J6 Serial Interface

### 5.2 J6 SPI Interface

### 5.3 J6 USB Interface

## 6 Electrical Specifications

### 6.1 Absolute Maximum Ratings

Parameter	Rating
Voltage at any pin with respect to ground	-0.3V to +3.6V
Operating temperature	-40°C to 85°C (-40°F to 185°F)
Storage temperature	-65°C to 125°C (-85°F to 257°F)

Table 4-1: Absolute Maximum Ratings

### 6.2 DC Operating Characteristics

Parameter	Min	Typical	Max	Units
VDD	3.0	3.3	3.6	Volts
High-level Input	2.0		VDD I/O+0.3	Volts
Low-level Input	-0.3		0.8	Volts
High-level Output @2mA	VDD I/O-0.4			Volts
High-level Output @0mA	VDD I/O-0.2			Volts
Low-level Output @2mA			0.4	Volts
Low-level Output @0mA			0.2	Volts
Input leakage current			10	µA
Power supply current from VDD		125	170	mA
Input Capacitance			5.3	pF

Table 4-2: DC Operating Characteristics

(\*) **Note:** Power supply current as measured in firmware version i2128d722B05.

Note: All measures are in millimeters

Figure 5-7-1: Mechanical Dimensions

## 8 Evaluation Board

The II-EVB-363-Mx evaluation board enables you to evaluate the Nano LANReach without changing anything in your current development environment. Using a simple Windows-based application on a PC, you can issue AT+i commands to the iChip CO2144 and get responses.

***Note:** The evaluation board supports serial host data rates of up to 1Mbps.*

---

AT+i commands are used to configure parameter values into iChip's flash memory and activate Internet tasks such as email send, sockets, FTP sessions, configuration, and more.

A full description of AT+i commands can be found in the *AT+i Programmer's Manual* on Connect One's website at: <http://www.connectone.com/support.asp?did=35>

To help you evaluate the Nano LANReach, Connect One supplies the iChipConfig Utility. This is a Windows-based application that contains intuitive dialog boxes to fully configure iChip CO2144. It doesn't require any knowledge of AT+i commands. It also contains local firmware update functionality. The iChipConfig Utility allows you to perform specific Internet communication tasks such as sending and receiving emails, activating iChip's websites, entering SerialNET mode, and more. The latest iChipConfig Utility version and user manual can be found on Connect One's website under the Support section.

On board connectors allow a choice of Host interfaces:

RS232 COM port

SPI

USB

## 9 Ordering Information

<b>Ordering Information</b>	
<b>Part Number</b>	<b>Description</b>
iL-SM2144N1-I	Nano LANReach module
II-EVB-363ML-110/220	Evaluation board for Nano LANReach. Includes Nano LANReach attached to a motherboard's 30 pin connector. The main board includes one male-female RS-232 DB-9 connector for high speed USART, RJ-45, USB, SPI and DC power connector. Includes female 30 Pin connector for prototyping. Specify 110V/220v power supply. RoHS.

# 10 Internet Protocol Compliance

Nano LANReach complies with the Internet standards listed in the following table.

<b>RFC 768</b>	User datagram protocol (UDP)
<b>RFC 791</b>	Internet protocol (IP)
<b>RFC 792</b>	ICMP – Internet control message protocol
<b>RFC 793</b>	Transmission control protocol (TCP)
<b>RFC 821</b>	Simple mail transfer protocol (SMTP)
<b>RFC 822</b>	Standard for the format of ARPA Internet text messages
<b>RFC 826</b>	Ethernet address resolution protocol (ARP)
<b>RFC 959</b>	File transfer protocol (FTP)
<b>RFC 854</b>	TELNET protocol specification
<b>RFC 857</b>	Telnet ECHO option
<b>RFC 858</b>	Telnet suppress go-ahead option
<b>RFC 1034</b>	Domain names (DNS) - concepts and facilities
<b>RFC 1035</b>	Domain names (DNS) - implementation and specification
<b>RFC 1073</b>	Telnet window size option
<b>RFC 1091</b>	Telnet terminal type option
<b>RFC 1321</b>	MD5 message digest algorithm
<b>RFC 1939</b>	Post office protocol - version 3 (POP3)
<b>RFC 1957</b>	Some observations on the implementations of the post office protocol (POP3)
<b>RFC 2030</b>	Simple network time protocol (SNTP)
<b>RFC 2045</b>	Multipurpose Internet mail extensions (MIME) part one: internet message body format
<b>RFC 2046</b>	MIME part two: media types
<b>RFC 2047</b>	MIME part three: message header extensions for non-ASCII text
<b>RFC 2048</b>	MIME part four: registration procedures
<b>RFC 2049</b>	MIME part five: conformance criteria and examples
<b>RFC 2068</b>	Hypertext transfer protocol HTTP/1.1
<b>RFC 2131</b>	Dynamic host configuration protocol (DHCP)
<b>RFC 2132</b>	DHCP options (only relevant parts)
<b>RFC 2228</b>	FTP security extensions
<b>RFC 2246</b>	The TLS protocol version 1.0
