

GENERAL DESCRIPTION

The SP338 is an advanced multiprotocol transceiver supporting RS-232, RS-485, and RS-422 serial standards in a 40 pin QFN package. Integrated cable termination and four configuration modes allow all three protocols to be used interchangeably over a single cable or connector with no additional switching components. Full operation requires only four external charge pump capacitors.

The RS-485/422 modes feature up to two drivers and four receivers (2TX/4RX) in half, full, and mixed duplex configurations. The RS-232 mode (3TX/5RX) provides full support of all eight signals commonly used with the DB9 RS-232 connector. A dedicated diagnostic loopback mode is also provided.

The high speed drivers operate up to 20Mbps in RS-485/422 modes, and up to 1Mbps in RS-232 mode. All drivers can be slew limited to 250kbps in any mode to minimize electromagnetic interference (EMI).

All transmitter outputs and receiver inputs feature robust electrostatic discharge (ESD) protection to $\pm 15\text{kV}$ Human Body Model (HBM) and $\pm 8\text{kV}$ IEC-61000-4-2 Contact. Each receiver output has full fail-safe protection to avoid system lockup, oscillation, or indeterminate states by defaulting to logic-high output level when the inputs are open, shorted, or terminated but undriven. No external biasing resistors are required.

The RS-232 receiver inputs include a $5\text{k}\Omega$ pull-down to ground. The RS-485/422 receiver inputs are high impedance ($>96\text{k}\Omega$ when termination is disabled), allowing up to 256 devices on a single communication bus (1/8th unit load).

The SP338 operates from a single power supply, either 3.3V or 5V, with low idle current. The shutdown mode consumes less than $10\mu\text{A}$ for low power standby operation.

FEATURES

- Pin selectable Cable Termination
- No external resistors required for RS-485/422 termination and biasing
- 3.3V or 5V Single Supply Operation
- Robust ESD Protection on bus pins
 - $\pm 15\text{kV}$ Human Body Model (HBM)
 - $\pm 8\text{kV}$ IEC 61000-4-2 (Contact)
- Max Data Rate of 20Mbps in RS-485/422 Modes and up to 1Mbps in RS-232 Modes
- Pin selectable 250kbps Slew Limiting
- 3 Drivers, 5 Receivers RS-232/V.28
- 2 Drivers, 4 Receivers RS-485/422
 - Full, Half, and Mixed Duplex Configurations
 - 1/8th Unit Load, up to 256 receivers on bus
- RS-485/422 Enhanced Failsafe for open, shorted, or terminated but idle inputs
- Space saving 6mm x 6mm QFN-40 Package
- Pin compatible with SP339E

TYPICAL APPLICATIONS

- Dual Protocol Serial Ports (RS-232 or RS-485/422)
- Industrial Computers
- Industrial and Process Control Equipment
- Point-Of-Sale Equipment
- Networking Equipment
- HVAC Controls Equipment
- Building Security and Automation Equipment

ORDERING INFORMATION

PART NUMBER	PACKAGE	OPERATING TEMPERATURE RANGE	DEVICE STATUS
SP338EER1-L	40-pin QFN	-40°C to +85°C	Active
SP338EER1-L/TR	40-pin QFN	-40°C to +85°C	Active
SP338ECR1-L	40-pin QFN	0°C to +70°C	Active
SP338ECR1-L/TR	40-pin QFN	0°C to +70°C	Active

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections to the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability and cause permanent damage to the device.

Supply Voltage V_{CC}	-0.3V to +6.0V
Receiver Input Voltage (from Ground)	$\pm 18V$
Driver Output Voltage (from Ground)	$\pm 18V$
Short Circuit Duration, TX out to Ground	Continuous
Voltage at TTL Input Pins	-0.3V to ($V_{CC} + 0.5V$)
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C
Power Dissipation 40-pin QFN (derate 17mW/°C above +70°C)	500mW

CAUTION:

ESD (ElectroStatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

ESD PROTECTION

		MIN.	TYP.	MAX.	UNITS

BLOCK DIAGRAM BY MODE (MODE2, MODE1, MODE0)

FIGURE 1. MODE 000 - LOOPBACK

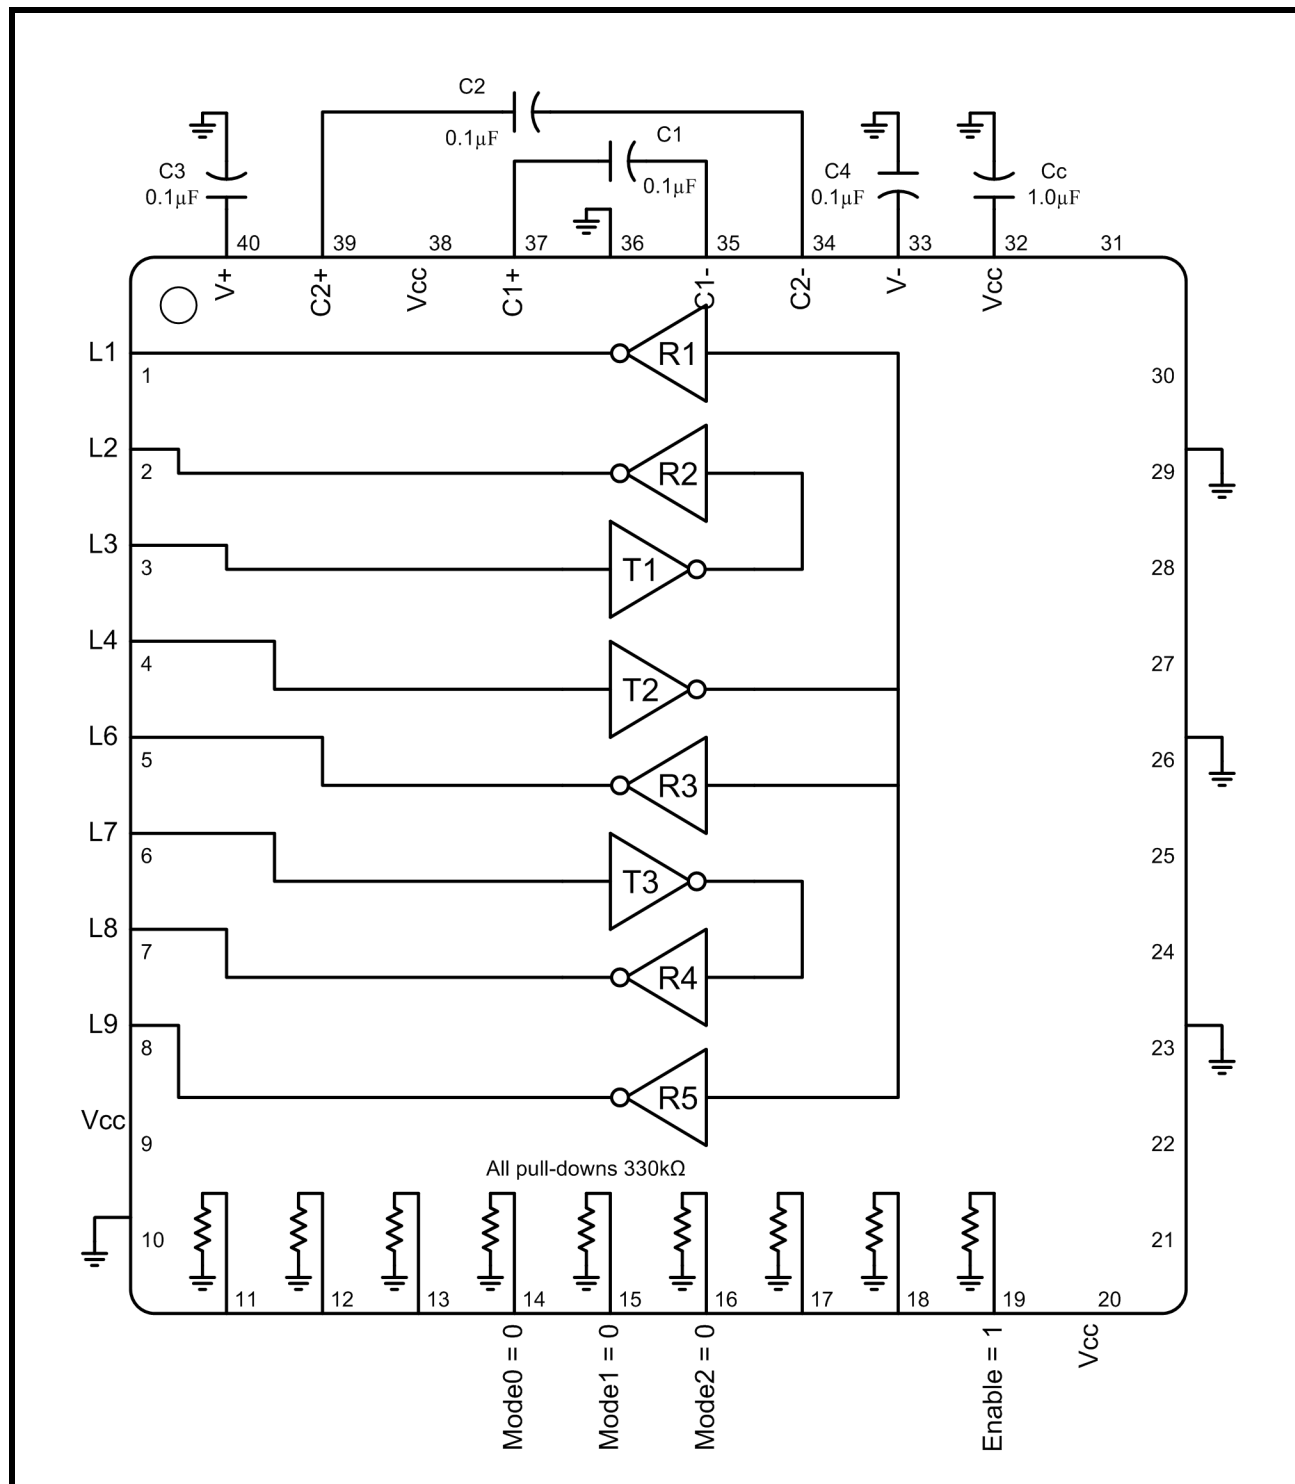

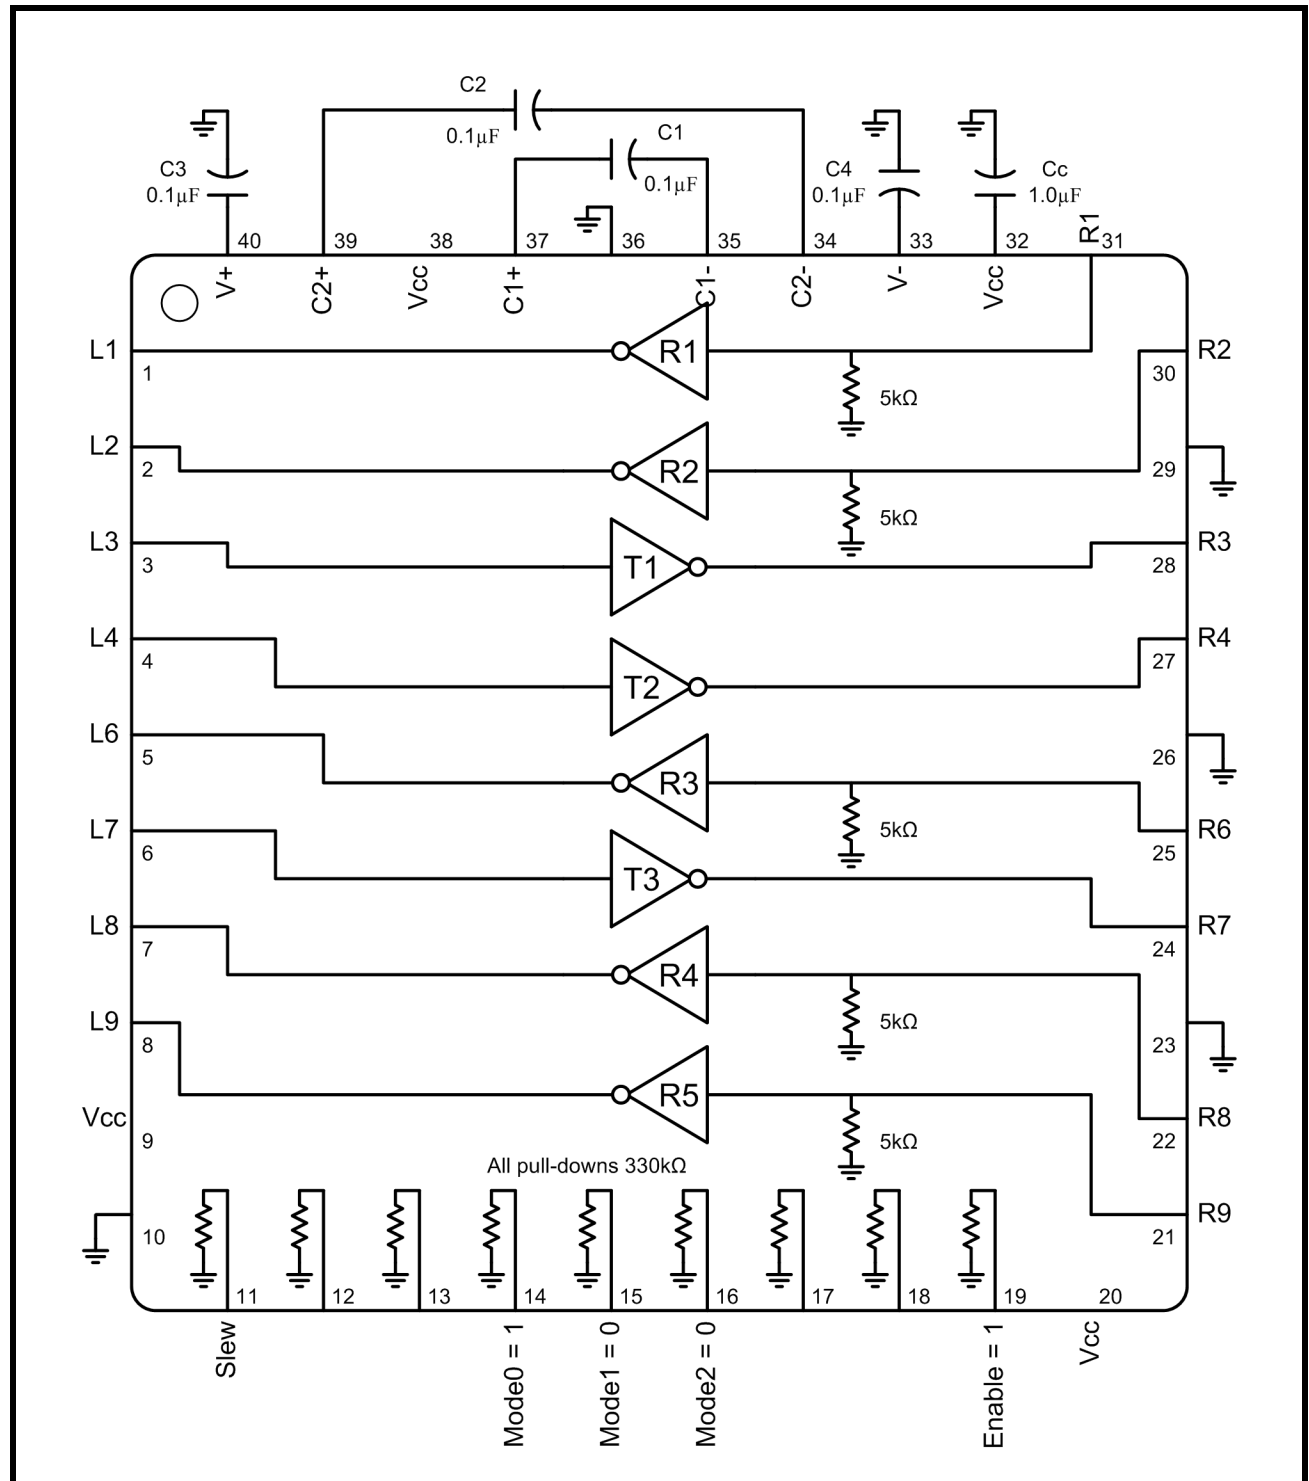

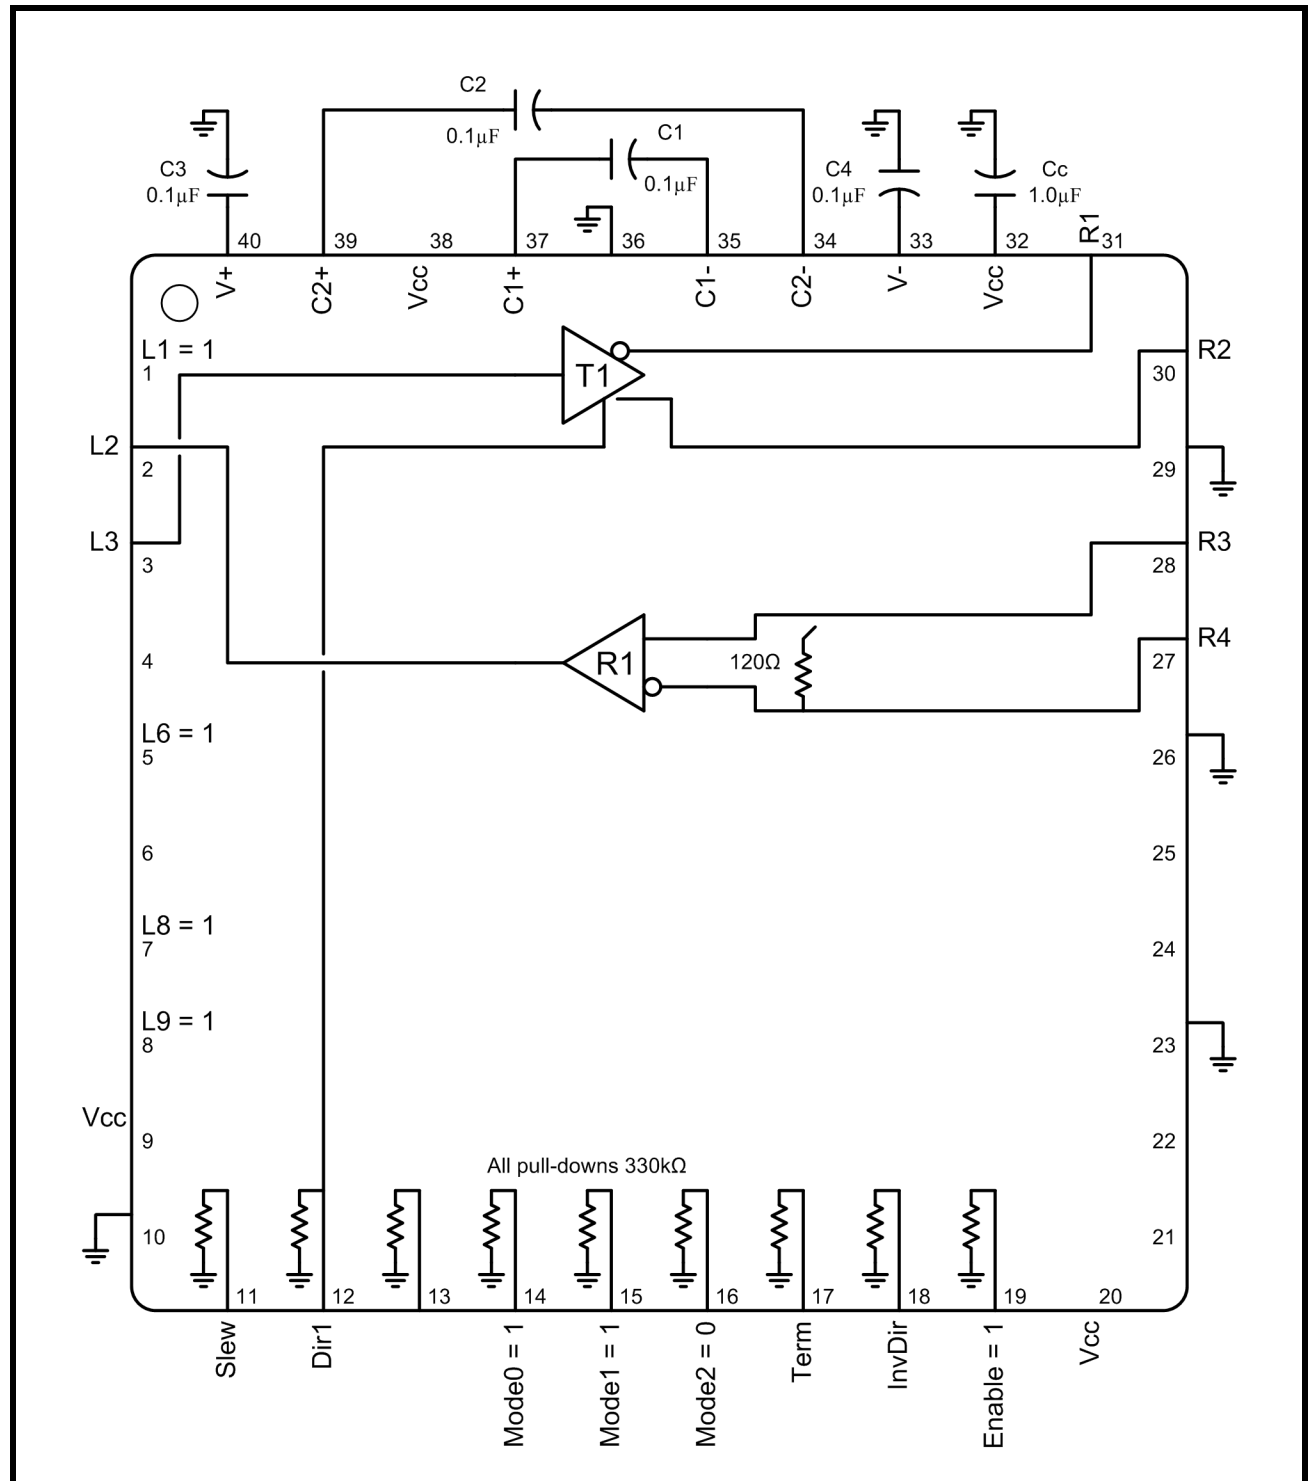

FIGURE 2. MODE 001 - RS-232

The schematic diagram illustrates the internal circuitry of the ADXL345 digital accelerometer. Key components include an operational amplifier (T1) and a comparator (R1). The circuit is powered by a V+ supply (pin 40) and a Vcc supply (pin 32). Various capacitors (C1, C2, C3, C4) and resistors (R1, R2) are shown, along with a 120Ω resistor. The diagram also includes labels for pins 1 through 31, such as L1=1, L2, L3, L6=1, L8=1, L9=1, Slew, Dir1, Mode0=0, Mode1=1, Mode2=0, Term, InvDir, Enable=1, and Vcc. A note indicates that all pull-downs are 330kΩ.

FIGURE 4. MODE 011 - RS-485/422 FULL DUPLEX #1

The schematic diagram illustrates the ADXL045 digital accelerometer circuit. The chip is shown with its 40 pins connected to various components. Power supply pins (V+, Vcc) are connected to a 3.3V regulator (R1) and decoupling capacitors (C1, C2, C3, C4, Cc). The chip's internal logic includes two comparators (T1, T2) and two resistors (R1, R2) connected to the L2, L3, L6, L7, L8, and L9 pins. The chip is configured with Mode0=0, Mode1=0, Mode2=1, and Enable=1. The output pins (R2, R3, R4, R6, R7, R8, R9) are connected to a 3.3V pull-up network. The chip is labeled 'ADXL045' and 'All pull-downs 330kΩ'.

PRODUCT SUMMARY

The SP338 is an advanced multiprotocol transceiver supporting RS-232, RS-485, and RS-422 serial standards in a 40 pin QFN package. Integrated cable termination and four configuration modes allow all three protocols to be used interchangeably over a single cable or connector with no additional switching components. The RS-485/422 modes feature up to two drivers and four receivers (2TX/4RX) in half, full, and mixed duplex configurations. The RS-232 mode (3TX/5RX) provides full support of all eight signals commonly used with the DB9 RS-232 connector. A dedicated mode is also available for diagnostic loopback testing.

INTERNALLY SWITCHED CABLE TERMINATION

Enabling and disabling the RS-485/422 termination resistor is one of the largest challenges system designers face when sharing a single connector or pair of lines between multiple serial protocols. A termination resistor may be necessary for accurate RS-485/422 communication, but must be removed when the lines are used for RS-232. SP338 provides an elegant solution to this problem by integrating the termination resistor and switching control, and allowing it to be switched in and out of the circuit with a single pin. No external switching components are required.

ENHANCED FAILSAFE

Ordinary RS-485 differential receivers will be in an indeterminate state whenever the data bus is not being actively driven. The enhanced failsafe feature of the SP338 guarantees a logic-high receiver output when the receiver inputs are open, shorted, or terminated but idle/undriven. The enhanced failsafe interprets 0V differential as a logic high with a minimum 50mV noise margin, while maintaining compliance with the EIA/TIA-485 standard of $\pm 200\text{mV}$. No external biasing resistors are required, further easing the usage of multiple protocols over a single connector.

$\pm 15\text{kV}$ ESD PROTECTION

ESD protection structures are incorporated on all pins to protect against electrostatic discharges encountered during handling and assembly. The bus pins (driver outputs and receiver inputs) have extra protection structures, which have been tested up to $\pm 15\text{kV}$ without damage. These structures withstand high ESD in all states: normal operation, shutdown and powered down.

ESD protection is tested in various ways. Exar uses the following methods to qualify the protection structures designed into SP338:

- $\pm 15\text{kV}$ using the Human Body Model (HBM)

- $\pm 8\text{kV}$ using IEC 61000-4-2 Contact Discharge

The IEC 61000-4-2 standard is more rigorous than HBM, resulting in lower voltage levels compared with HBM for the same level of ESD protection. Because IEC 61000-4-2 specifies a lower series resistance, the peak current is higher than HBM. The SP338 has passed both HBM and IEC 61000-4-2 testing without damage.

DIAGNOSTIC LOOPBACK MODE

The SP338 includes a diagnostic digital loop back mode for system testing as shown in [Figure 1](#). The loopback mode connects the TTL driver inputs to the TTL receiver outputs, bypassing the analog driver and receiver circuitry. The analog/bus pins are internally disconnected in this mode.
