

NCV8170

Ultra-Low I_Q 150 mA CMOS LDO Regulator

The NCV8170 series of CMOS low dropout regulators are designed specifically for portable battery-powered applications which require ultra-low quiescent current. The ultra-low consumption of typ. 500 nA ensures long battery life and dynamic transient boost feature improves device transient response for wireless communication applications. The device is available in small 1 × 1 mm xDFN4 and SOT-563 packages.

Features

- Operating Input Voltage Range: 2.2 V to 5.5 V
- Output Voltage Range: 1.2 V to 3.6 V (0.1 V Steps)
- Ultra-Low Quiescent Current Typ. 0.5 μ A
- Low Dropout: 170 mV Typ. at 150 mA
- High Output Voltage Accuracy $\pm 1\%$
- Stable with Ceramic Capacitors 1 μ F
- Over-Current Protection
- Thermal Shutdown Protection
- NCV8170A for Active Discharge Option
- Available in Small 1 × 1 mm xDFN4 and SOT-563 Packages
- These are Pb-Free Devices

Typical Applications

- Battery Powered Equipments
- Portable Communication Equipments
- Cameras, Image Sensors and Camcorders

ORDERING INFORMATION

See detailed ordering, marking and shipping information on page 19 of this data sheet.

NCV8170

PIN FUNCTION DESCRIPTION

| Pin No. XDFN4 | Pin No. SOT-563 | Pin Name | Description |
|---------------|-----------------|----------|------------------------------|
| 4 | 1 | IN | Power Supply Input Voltage |
| 2 | 2 | GND | Power Supply Ground |
| 3 | 6 | EN | Chip Enable Pin (Active "H") |
| 1 | 3 | OUT | Output Pin |
| EPAD | | EPAD | Internally Connected to GND |
| | 4 | NC | No Connect |
| | 5 | GND | Power Supply Ground |

ABSOLUTE MAXIMUM RATINGS

| Symbol | Rating | Value | Unit |
|--------------------|---|------------------------|------|
| V_{IN} | Input Voltage (Note 1) | 6.0 | V |
| V_{OUT} | Output Voltage | -0.3 to $V_{IN} + 0.3$ | V |
| V_{CE} | Chip Enable Input | -0.3 to 6.0 | V |
| $T_{J(MAX)}$ | Maximum Junction Temperature | 125 | °C |
| T_{STG} | Storage Temperature | -55 to 150 | °C |
| ESD _{HBM} | ESD Capability, Human Body Model (Note 2) | 2000 | V |
| ESD _{MM} | ESD Capability, Machine Model (Note 2) | 200 | V |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHARACTERISTICS and APPLICATION INFORMATION for Safe Operating Area.
2. This device series incorporates ESD protection and is tested by the following methods:
 ESD Human Body Model tested per AEC-Q100-002 (EIA/JESD22-A114)
 ESD Machine Model tested per AEC-Q100-003 (EIA/JESD22-A115)
 Latchup Current Maximum Rating tested per JEDEC standard: JESD78

THERMAL CHARACTERISTICS

| Symbol | Rating | Value | Unit |
|-----------------|---|------------|------|
| $R_{\theta JA}$ | Thermal Characteristics, Thermal Resistance, Junction-to-Air XDFN4 1 × 1 mm SOT-563 | 250 200 | °C/W |

* Active discharge feature is present only in NCV8170AxxvvvTyG devices

ELECTRICAL CHARACTERISTICS – VOLTAGE VERSION 1.2 V

($-40^{\circ}\text{C} \leq T_J \leq 125^{\circ}\text{C}$; $V_{\text{IN}} = 2.5\text{ V}$; $I_{\text{OUT}} = 1\text{ mA}$, $C_{\text{IN}} = C_{\text{OUT}} = 1.0\text{ }\mu\text{F}$, unless otherwise noted. Typical values are at $T_A = +25^{\circ}\text{C}$.) (Note 3)

| Symbol | Parameter | Test Conditions | Min | Typ | Max | Unit |
|----------------------------|--|---|-------|------|-------|----------------------------|
| V_{IN} | Operating Input Voltage | | 2.2 | – | 5.5 | V |
| V_{OUT} | Output Voltage | $T_A = +25^{\circ}\text{C}$ | 1.188 | 1.2 | 1.212 | V |
| | | $-40^{\circ}\text{C} \leq T_J \leq 125^{\circ}\text{C}$ | 1.176 | 1.2 | 1.224 | |
| Line_{Reg} | Line Regulation | $2.5\text{ V} < V_{\text{IN}} \leq 5.5\text{ V}$, $I_{\text{OUT}} = 1\text{ mA}$ | – | 0.05 | 0.20 | %/V |
| Load_{Reg} | Load Regulation | $0\text{ mA} < I_{\text{OUT}} \leq 150\text{ mA}$, $V_{\text{IN}} = 2.5\text{ V}$ | –20 | 1 | 20 | mV |
| V_{DO} | Dropout Voltage | (Note 4) | – | – | – | mV |
| I_{OUT} | Output Current | (Note 5) | 150 | – | – | mA |
| I_{SC} | Short Circuit Current Limit | $V_{\text{OUT}} = 0\text{ V}$ | – | 225 | – | mA |
| I_{Q} | Quiescent Current | $I_{\text{OUT}} = 0\text{ mA}$ | – | 0.5 | 0.9 | μA |
| I_{STB} | Standby Current | $V_{\text{EN}} = 0\text{ V}$, $T_J = 25^{\circ}\text{C}$ | – | 0.1 | 0.5 | μA |
| V_{ENH} | EN Pin Threshold Voltage | EN Input Voltage “H” | 1.2 | – | – | V |
| V_{ENL} | EN Pin Threshold Voltage | EN Input Voltage “L” | – | – | 0.4 | V |
| I_{EN} | EN Pin Current | $V_{\text{EN}} \leq V_{\text{IN}} \leq 5.5\text{ V}$ (Note 6) | – | 10 | – | nA |
| PSRR | Power Supply Rejection Ratio | $f = 1\text{ kHz}$, $V_{\text{IN}} = 2.2\text{ V} + 200\text{ mVpp}$ Modulation $I_{\text{OUT}} = 150\text{ mA}$ $I_{\text{OUT}} = 10\text{ mA}$ | – | 57 | – | dB |
| | | | – | 63 | – | |
| V_{NOISE} | Output Noise Voltage | $V_{\text{IN}} = 5.5\text{ V}$, $I_{\text{OUT}} = 1\text{ mA}$, $f = 100\text{ Hz}$ to 1 MHz , $C_{\text{OUT}} = 1\text{ }\mu\text{F}$ | – | 85 | – | μV_{rms} |
| R_{LOW} | Active Output Discharge Resistance (A option only) | $V_{\text{IN}} = 5.5\text{ V}$, $V_{\text{EN}} = 0\text{ V}$ (Note 6) | – | 100 | – | Ω |
| T_{SD} | Thermal Shutdown Temperature | Temperature Increasing from $T_J = +25^{\circ}\text{C}$ (Note 6) | – | 175 | – | $^{\circ}\text{C}$ |
| T_{SDH} | Thermal Shutdown Hysteresis | Temperature Falling from T_{SD} (Note 6) | – | 25 | – | $^{\circ}\text{C}$ |

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

3. Performance guaranteed over the indicated operating temperature range by design and/or characterization production tested at $T_J = T_A = 25^{\circ}\text{C}$. Low duty cycle pulse techniques are used during testing to maintain the junction temperature as close to ambient as possible.

4. Not Characterized at $V_{\text{IN}} = 2.2\text{ V}$, $V_{\text{OUT}} = 1.2\text{ V}$, $I_{\text{OUT}} = 150\text{ mA}$.

5. Respect SOA.

6. Guaranteed by design and characterization.

NCV8170

ELECTRICAL CHARACTERISTICS – VOLTAGE VERSION 1.5 V

($-40^{\circ}\text{C} \leq T_J \leq 125^{\circ}\text{C}$; $V_{IN} = 2.5\text{ V}$; $I_{OUT} = 1\text{ mA}$, $C_{IN} = C_{OUT} = 1.0\ \mu\text{F}$, unless otherwise noted. Typical values are at $T_A = +25^{\circ}\text{C}$.) (Note 7)

| Symbol | Parameter | Test Conditions | Min | Typ | Max | Unit |
|----------------------------|--|---|-------|------|-------|----------------------------|
| V_{IN} | Operating Input Voltage | | 2.2 | – | 5.5 | V |

APPLICATIONS INFORMATION

General

The NCV8170 is a high performance 150 mA Linear Regulator with Ultra Low IQ. This device delivers low Noise and high Power Supply Rejection Ratio with excellent dynamic performance due to employing the Dynamic Quiescent Current adjustment which assure ultra low I_Q consumption at no – load state. These parameters make this device very suitable for various battery powered applications.

Input Decoupling (C_{IN})

It is recommended to connect at least a 1 μF Ceramic X5R or X7R capacitor between IN and GND pins of the device. This capacitor will provide a low impedance path for any unwanted AC signals or Noise superimposed onto constant Input Voltage. The good input capacitor will limit the influence of input trace inductances and source resistance during sudden load current changes.

Higher capacitance and lower ESR Capacitors will improve the overall line transient response.

Output Decoupling (C_{OUT})

The NCV8170 does not require a minimum Equivalent Series Resistance (ESR) for the output capacitor. The device is designed to be stable with standard ceramics capacitors with values of 1.0 μF or greater up to 10 μF. The X5R and X7R types have the lowest capacitance variations over temperature thus they are recommended. There is recommended connect the output capacitor as close as possible to the output pin of the regulator.

Enable Operation

The NCV8170 uses the EN pin to enable /disable its device and to activate /deactivate the active discharge function at devices with this feature. If the EN pin voltage is pulled below 0.4 V the device is guaranteed to be disable. The active discharge transistor at the devices with Active Discharge Feature is activated and the output voltage V_{OUT} is pulled to GND through an internal circuitry with effective resistance about 100 ohms.

If the EN pin voltage is higher than 1.2 V the device is guaranteed to be enabled. The internal active discharge

circuitry is switched off and the desired output voltage is available at output pin. In case the Enable function is not required the EN pin should be connected directly to input pin.

Thermal Shutdown

When the die temperature exceeds the Thermal Shutdown point (TSD = 175°C typical) the device goes to disabled state and the output voltage is not delivered until the die temperature decreases to 150°C. The Thermal Shutdown feature provides a protection from a catastrophic device failure at accidental overheating. This protection is not intended to be used as a substitute for proper heat sinking.

Power Dissipation and Heat sinking

The maximum power dissipation supported by the device is dependent upon board design and layout. Mounting pad configuration on the PCB, the board material, and the ambient temperature affect the rate of junction temperature rise for the part. The maximum power dissipation the NCV8170 device can handle is given by:

$$P_{D(MAX)} = \frac{[T_{J(MAX)} - T_A]}{R_{\theta JA}} \quad \text{(eq. 1)}$$

The power dissipated by the NCV8170 device for given application conditions can be calculated from the following equations:

$$P_D \approx V_{IN}(I_{GND}(I_{OUT})) + I_{OUT}(V_{IN} - V_{OUT}) \quad \text{(eq. 2)}$$

or

$$V_{IN(MAX)} \approx \frac{P_{D(MAX)} + (V_{OUT} \times I_{OUT})}{I_{OUT} + I_{GND}} \quad \text{(eq. 3)}$$

Hints

V_{IN} and GND printed circuit board traces should be as wide as possible. When the impedance of these traces is high, there is a chance to pick up noise or cause the regulator to malfunction. Place external components, especially the output capacitor, as close as possible to the NCV8170, and make traces as short as possible.

NCV8170
