The Models 2220, 2220G, 2230, and 2230G Multi-Channel Programmable DC Power Supplies combine two and three channels of output power to cost-effectively characterize and test a wide range of devices, circuit boards, modules, and products that require more than one power source. The Models 2220-30-1 and 2220G-30-1 supplies provide two channels, with each channel capable of outputting up to 30V and up to 1.5A. The Models 2230-30-1 and 2230G-30-1 include two 30V/1.5A channels and add a 6V channel with up to 5A output for powering digital circuits. These multi-channel power supplies offer an excellent combination of performance, versatility, and ease of use to maximize the information from characterization or test as quickly and as easily as possible. They perform as effectively in automated test systems as they do in manual instrument configurations. The USB interface is standard on all models; the "G" versions add a GPIB interface.

**Independent and Isolated Outputs**

Since each channel in these multi-channel power supplies is completely independent and isolated from each other, these power supplies can be used to provide power to two circuits that are optically isolated or transformer-isolated from each other and have different reference points. Their isolated channels eliminate the need for a second power supply to power one of the isolated circuits. Additionally, each channel can be independently controlled, so channels can be individually turned on and turned off at any time. Thus, these power supplies can be used to power up a circuit with multiple voltage levels (such as a digital circuit) that must be turned on in a specified time sequence. Furthermore, the timer capability allows you to set up unattended tests that turn off the channels after a programmed time interval to protect a device-under-test (DUT) from potential damage due to the continuous application of power beyond a recommended time interval. Both isolated and independent channels provide excellent versatility and flexibility to address a wide range of test applications.

**Accurate Power Delivery to the Load**

With basic voltage setting accuracy and voltage readback accuracy of 0.03% for each channel, the exact voltage programmed for any channel is applied at the output terminals. Plus, the rear panel connections for each channel include remote sense terminals that compensate for voltage drops in the power supply leads. This helps to ensure that the correct voltage is delivered accurately to the load terminals of the DUT. Many other multi-channel power supplies do not provide remote sensing, which reduces overall system accuracy.
Multi-Channel USB and USB/GPIB Programmable DC Power Supplies

Great accuracy is not limited to voltage; the basic current setting and readback accuracy is 0.1%, providing high quality load current measurements. Also, with less than 3mV p-p noise, the power applied to the DUT’s load terminals is both accurate and of high quality.

Excellent accuracy, remote sensing, and a wide power output range make the Series 2200 Multi-Channel DC Power Supplies essential test instruments both on the bench and in test systems. Their ability to generate a wide range of output power and measure a wide range of load currents is supported with:

- Maximum output power of 45W on the 30V channels
- Maximum output power of 30W on the 6V channel
- Voltage setting and reading resolution of 1mV
- Current setting and reading resolution of 1mA

Configure the Channels to Double Output Voltage or Current or Create Bipolar Power Supplies

The two 30V channels can be combined if more than 30V or more than 1.5A is required. The two 30V outputs can be wired in series to enable an output of 60V with a maximum current output of 1.5A or can be wired in parallel to get up to 3A at 30V. In series or parallel configurations, the power supplies offer special display modes that indicate the actual voltage and current for the combined pair. It’s also easy to wire the outputs to make a ±30V bipolar supply and to maintain a user-defined ratio between the two outputs when using Tracking mode. These modes of operation extend the performance of the power supplies, while the display shows the actual outputs in these special modes to avoid any confusion or incorrect interpretation of the displayed data.

Convenience Features Help Get Results More Quickly

These multi-channel power supplies offer a number of features that return results quickly and easily:

- A rotary knob, with user-selectable step size, makes it easy to check circuit response to changing voltage or current. Alternatively, a direct-entry numeric keypad can be used to simplify setting precise voltage and current values.
- Each channel has its own readout on the display. The voltage and current being delivered to each channel are visible at a glance. A bright vacuum fluorescent display provides excellent readability at a distance, at an angle, or under dim lighting conditions.

Accessories Available

CS-1655-15 Rear Panel Mating Connector for Models 2220 and 2230 Multi-Channel DC Power Supplies

<td>Two interface choices are available to enable PC control from a user-preferred programming environment. A USB TMC-compliant device port is included on all versions of these power supplies. The “G” versions add the GPIB interface for the flexibility of either USB or GPIB control. LabView and IVI drivers are provided to facilitate instrument control, data logging, and analysis. With these drivers, the power supplies can be controlled from most commercially-available software packages such as MatLab. Thus, these power supplies can be controlled as a single unit or as part of an automated test system.</td>

- ± 0.03% + 5 mA

**ISOLATION VOLTAGE, OUTPUT TO CHASSIS:** Any output can be floated up to 240V (DC + peak AC with AC limited to a maximum of 5Vpk-pk and a maximum frequency of 60Hz) relative to earth ground terminal.

**ISOLATION VOLTAGE, OUTPUT TO OUTPUT:** Any output can be floated up to 240V (DC + peak AC with AC limited to a maximum of 5Vpk-pk and a maximum frequency of 60Hz) relative to any other output terminal.

**VOLTAGE TRANSIENT RESPONSE SETTLING TIME, LOAD CHANGE (typical):**<150ms to within 75mV following a change from 0 mA to 1 A.

**VOLTAGE TRANSIENT RESPONSE SETTLING TIME, SETTING CHANGE, RISING (typical):**<150ms to within 75mV following a change from IV to IV into a 10kΩ resistor (Ch. 1, 2), from 0.4V to 4V into a 4Ω resistor (Ch. 3).

**VOLTAGE TRANSIENT RESPONSE SETTLING TIME, SETTING CHANGE, FALLING (typical):**<150ms to within 75mV following a change from IV to IV into a 10kΩ resistor (Ch. 1, 2), from 0.4V to 4V into a 4Ω resistor (Ch. 3).

**DISPLAY:** Vacuum fluorescent display.

**MEMORY:** 30 setup memories.

**TRACKING AND COMBINATION MODES:**

- Tracking Mode: Maintains the ratio on the two 30V output channels that is present when the control is activated.

**Combination V1+V2 Series Mode:** Deliver up to 60 W when CH1 and CH2 are wired in series. Meter reads back combined voltage.

**Combination III+I2 Parallel Mode:** Deliver up to 3 A when CH1 and CH2 are wired in parallel. Meter reads back combined current.

**REAR PANEL CONNECTIONS:**
- USB Device Port, Type B connector, USBTMC compatible. 2220G and 2230G versions include a GPIB interface, IEEE-488.2 compliant.
- POWER SOURCE:
  - AC INPUT: Non-“J” versions: Switchable between 120VAC or 240VAC, nominal (different fuse required for each voltage). “J” Versions: 100VAC, nominal.
  - FREQUENCY: 50/60Hz
  - POWER CONSUMPTION: Dual Channel Versions: 350VA. Triple Channel Versions: 650VA

**PHYSICAL CHARACTERISTICS**

- **PROTECTIVE BOOTS AND HANDLE INSTALLED:**
  - Height: 105 mm (4.15 in.)
  - Weight: 241.8 mm (9.52 in.)
  - Depth: 384 mm (15.12 in.)

- **PROTECTIVE BOOTS AND HANDLE REMOVED:**
  - Height: 90.7 mm (3.57 in.)
  - Weight: 241.8 mm (9.52 in.)
  - Depth: 384 mm (15.12 in.)

- **NET WEIGHT:**
  - 2220-30-1: 8.2 kg (18 lb.)
  - 2230-30-1: 8.5 kg (19 lb.)

- **SHIPPING WEIGHT:**
  - 2220-30-1: 11 kg (24 lb.)
  - 2230-30-1: 11 kg (24 lb.)
