PRODUCT SUMMARY

SKY65367-11: 169 to 170 MHz Transmit/Receive Front-End Module

Applications

- Automated meter reading
- Advanced metering infrastructure
- ISM systems

Features

- Transmit output power: >+30 dBm
- High efficiency PA
- Receive loss: < 0.4 dB
- Transmit bypass mode with 0.9 dB insertion loss
- Sleep mode current: < 1 μA
- Integrated control logic
- Small footprint MCM (16-pin, 4 x 4 mm) package (MSL3, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to Skyworks Definition of Green™, document number SQ04–0074.

Description

The SKY65367-11 is a high-performance, transmit/receive (T/R) front-end module (FEM). The device includes a power amplifier (PA) capable of more than +30 dBm of transmit output power (Vcc = 3.6 V) at more than 43 percent PAE for the module (63 percent for the standalone PA). For current-sensitive applications, the PA can be bypassed to save battery current.

All functionality can be controlled by a three-wire interface. The FEM can be placed in a deep "sleep" mode, drawing less than 1 μA of current.

The receive chain consists of a low-loss single-pole, triple-throw (SP3T) switch, which provides an insertion loss of approximately 0.4 dB. Three separate Vcc pins enable maximum RF isolation.

The SKY65367-11 is packaged in a 16-pin, 4 x 4 mm Multi-Chip Module (MCM), which allows for a highly manufacturable low-cost solution.

A functional block diagram of the SKY65367-11 is shown in Figure 1.
