### Introduction

Plessey's ultra-high luminous PLW5630AGE SMT LEDs are designed for optical indicators, indoor displays, automotive lighting, backlights for switches/symbols/LCD, tubular lighting and other general lighting applications and the light is emitted close to a Lambertian distribution. The LEDs are packed in reels containing 3,000 pieces; each individual reel will be shipped in single intensity and colour bin, to provide close uniformity

## **Reliability - Lumen Maintenance**

LM-80 verification is conducted according to standardized IES LM-80-08 and TM-21-11 methods. Based on the different testing intervals data, we can extrapolate LED lumen maintenance. For more details on lumen maintenance testing, chromaticity and LED case temperatures please refer to our LM-80 reports.
