Introduction	2
Product Line	3-6

## TANTALUM CAPACITORS

THJ Series	-55°C to +175°C	8-11
THJ+ Series	-55°C to +200°C	12-14
TWC-Y Wet Tantalum Series	-55°C to +200°C	15-16
TWA-Y Wet Tantalum Series	-55°C to +200°C	17-20
THH Hermetic Series	-55°C to +230°C	21-24

## CERAMIC CAPACITORS

AT Series	-55°C to +250°C	26-30
X8R/X8L MLCC	-55°C to +150°C	31-33
MLCC with Flexitem <sup>®</sup>	-55°C to +150°C	34-37
MLCC Tin/Lead Termination "B"	-55°C to +150°C	38-41
Radial Leads/SkyCap <sup>®</sup> AR Series	-55°C to +150°C	42-47

## SWITCHED MODE POWER SUPPLY (SMPS)

SMX	-55°C to +200°C	49-52
SXP	-55°C to +200°C	53-54

## GLASS DIELECTRIC

ET Series Glass Capacitors	75°C to +200°C	56-61
----------------------------	----------------	-------

## RF/MICROWAVE MLCCs

AQ	-55°C to +175°C	63-66
SQCB	-55°C to +175°C	67-70

## CIRCUIT PROTECTION & SIGNAL INTEGRITY

CANAT	-55°C to +150°C	72-75
VR15	-55°C to +150°C	76-77

## NTC THERMISTORS

NB 12-20	-55°C to +150°C	79-80
NB 21-23	-55°C to +150°C	81-82
NC 12-20	-55°C to +150°C	83-84
ND/NE/NV	-55°C to +150°C	88-92
NJ/NI/NK	-55°C to +150°C	93

## ADVANCED TECHNOLOGY FILTERS

WQ / XQ / YQ / ZQ	-55°C to +200°C	95
-------------------	-----------------	----

## APPLICATION NOTES

Down-hole Applications Notes	97-99
------------------------------	-------

# INTRODUCTION

AVX is the world's leading manufacturer of passive electronic components. The demands for components used in extreme environmental conditions continue to grow considerably. The evolution of temperature critical applications are generating the need for components capable of enduring temperatures approaching or exceeding 250°C. AVX provides an array of components that fulfill these stringent requirements. Specific dielectric materials, construction methods and testing procedures are used to achieve exceptional high temperature performance. Advanced designs and testing capabilities at AVX provide the necessary tools to incorporate these components into high temperature applications such as down-hole oil exploration, aerospace and military equipment.

**For new designs  
or applications

## TANTALUM CAPACITORS

### THJ and THJ+ Series Capacitors

**+175°C and +200°C**

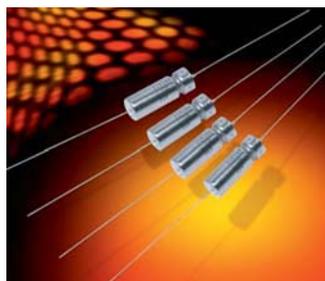

- 1st SMD +175°C tantalum capacitor on the market
- SMD = small size, fast pick & place ready
- Negative temperature operation (unlike wet electrolytics)
- 3x reflow +260°C and RoHS compliant
- Gold plated termination for hybrid assembly
- 200°C option available as THJ+ Series

Operating Temp	-55°C to +175°C (THJ) -55°C to +200°C (THJ+)
Case Size	1206 - 2917
Voltage	6.3V - 50V
Capacitance	0.1µF - 220µF

### TWC-Y High Temperature Wet Tantalum Capacitors

**+200°C**

- Hermetically Sealed Axial Leaded Tantalum Case
- Standard Case Sizes: T1-T4 per M39006
- Surge Resistant
- Meets Shock & Vibration per MIL-STD-202, Method 213 & 204
- Capable of Continuous Operation at 200°C with 60% rated voltage for most values rated for 500 hours

Operating Temp	-55°C to +200°C
Case	Axial T1 - T4
Voltage	6V - 125V
Capacitance	22µF - 560µF

### TWA-Y High Temperature Wet Tantalum Capacitors

**+200°C**

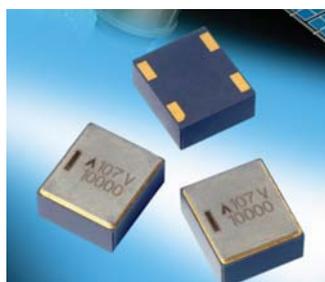

- Capable of withstanding life test up to 2000 hours at 200°C on selected values
- Hermetically sealed to withstand hard shock and vibration
- High capacitance cathode systems allows high level of CV in standard case sizes

Operating Temp	-55°C to +200°C
Case	Axial T1 - T4
Voltage	50V - 125V
Capacitance	22µF - 750µF

**COMING SOON**

### THH Hermetic Series Capacitors

**+230°C**

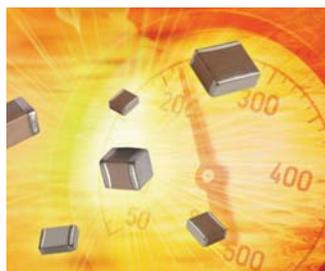

- World's first 230°C rated Tantalum capacitor
- Hermetically sealed SMD tantalum capacitors
- THH - Rated temperature up to 230°C
- Stability under humidity and ambient atmosphere
- Large case sizes including CTC-21D provide high capacitance values

Operating Temp	-55°C to +230°C
Case Size	9 (CTC-21D), I
Voltage	16V - 63V
Capacitance	3.3µF - 470µF

## MLCC CERAMIC CAPACITORS

### AT Series

### 200°C and 250°C

- High temperature C0G and VHT dielectrics
- Tested to MIL-STD-202
- Ideally suited for high temperature applications up to +250°C.
- Life tested to 1000hrs @ 200% rated voltage and +250°C.
- High current handling, volumetric efficiency, and insulation resistance.
- Very low ESR/ESL.
- Pd / Ag and 100% Tin Plated (RoHS Compliant) terminations available.

Operating Temp	-55°C to +250°C
Case Size	0805 - 2220
Voltage	16 - 50V
Capacitance	100pF - 1μF

### X8R/X8L MLCC

### +175°C and +200°C

- Designed for use in applications up to 150°C
- Excellent reliability compared to other capacitor technologies
- Low ESR / ESL compared to other technologies
- Tin solder finish
- FLEXITERM® available
- Epoxy termination for hybrid available
- Qualified to the highest automotive AEC-Q200 standards

Operating Temp	-55°C to +150°C
Case Size	0603 - 1206
Voltage	16 - 100V
Capacitance	330pF - 1μF

### MLCC with FLEXITERM®

### +150°C

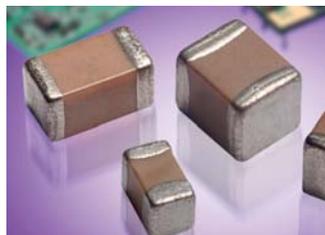

- Flexible termination system able to withstand 5mm bend test guaranteed.
- Available with X8R dielectric for high temperature applications.
- Increased temperature cycling performance, 3000 cycles and beyond.
- Reduction in circuit board flex failures.
- Base metal electrode system.
- Automotive or commercial grade products available.

Operating Temp	-55°C to +150°C
Case Size	0603 - 1206
Voltage	25 - 50V
Capacitance	270pF - 0.47μF

### MLCC with Tin/Lead Termination “B”

### +150°C

- MLCC with Tin/Lead Terminations
- Available with NP0 (C0G) and X8R dielectrics for high temperature applications.

Operating Temp	-55°C to +150°C
Case Size	0402 - 2220
Voltage	16 - 500V
Capacitance	0.5pF - 0.47μF

### Radial Leads/SkyCap® AR Series

### +150°C

- Conformally Coated Radial Ledged MLCC
- Available with C0G (NP0), X7R and X8R Dielectric
- Rated to 3000, 2000, 1000, 200, 100, 50 Volts
- Epoxy case material
- 100% Tin leads
- Qualified to AEC-Q200, PPAP Available

Operating Temp	-55°C to +150°C
Lead Spacing	0.20 - 0.40 inches
Voltage	50 - 200V
Capacitance	1pF - 0.33μF

## SWITCHED MODE POWER SUPPLY (SMPS)

### SMX Style Stacked MLC Capacitors

**+200°C**

- Ideally suited for high temperature applications up to 200°C
- Very low ESR and ESL
- Excellent capacitance retention with frequency
- Excellent high frequency performance
- Low DC leakage current
- High current handling capabilities
- Custom configurations are available such as unique geometries, lead configurations, packaging, and stress relief mounting options.

Operating Temp	-55°C to +200°C
Case Size	SMX 1 - 6
Voltage	25 - 500V
Capacitance	0.0039 - 340µF

### SXP Style SMPS MLC Capacitors

**+200°C**

- Low ESR, low ESL
- Low DC leakage
- Excellent high frequency performance
- Ideally suited for high temperature applications up to 200°C
- Excellent mechanical protection suitable for extreme harsh environment

Operating Temp	-55°C to +200°C
Case Size	SXP 1 - 4
Voltage	50 - 1000V
Capacitance	100pF - 10µF

## GLASS DIELECTRIC

### ET Series Glass Capacitors

**+200°C**

- Glass dielectric
- Working temperature range -75°C to 200°C
- Simple, rugged design and construction
- Available in both axial and radial leaded configurations
- Values from 0.5 pF to 2400 pF

Operating Temp	-75°C to +200°C
Case Size	ET06 - ET15
Voltage	50V
Capacitance	0.5pF - 2400pF

## RF/MICROWAVE MLCCs

### AQ Series

**+175°C**

- High current carrying capabilities
- High quality factors
- Very low ESR
- Very high series resonance
- Excellent stability under stresses of changing voltage

Operating Temp	-55°C to +175°C
Case Size	0605 - 1210
Voltage	50 - 500V
Capacitance	0.1pF - 5100pF

### SQCB Series

**+175°C**

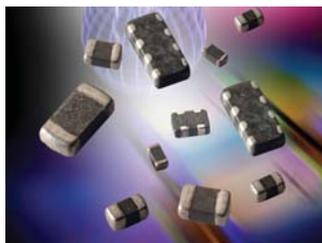

- Low ESR
- High Q
- High Self Resonance
- Capacitance Range 0.1 pF to 5100 pF
- 175°C Capability (+90 ± 30 PPM/°C Dielectric)

Operating Temp	-55°C to +175°C
Case Size	1210
Voltage	50 - 500V
Capacitance	0.1pF - 5100pF

## CIRCUIT PROTECTION & SIGNAL INTEGRITY

### High Temperature Automotive

**+175°C**

- Rated at 150°C
- ESD rating up to 25kV contact
- Low capacitance for capacitance sensitive applications - RF, antennas, data lines
- EMI/RFI attenuation in off state
- AEC Q200 qualified

Operating Temp	-55°C to +150°C
Case Size	0603 to 0612 4x array
Voltage	18V - 32V
Capacitance	10 - 22pF

### Radial Leaded High Temperature Automotive

**+175°C**

- Rated at 150°C
- Epoxy encapsulated for harsh environment
- EMI/RFI attenuation in off state
- Excellent current and energy handling
- AEC Q200 qualified

Operating Temp	-55°C to +150°C
Size	VR15, VR20
Voltage	14V - 48V
Energy	0.1 - 2.0J
Peak Current	30 - 120A

## NTC THERMISTORS

### SMT NTC Thermistors

**+150°C**

- Rated to 150°C
- Wide resistance range
- Fast thermal response
- Ni Barrier/100% Sn and PdPtAg termination options
- AEC Q200 qualified, custom hi-rel testing

Operating Temp	-55°C to +150°C
Case Size	0603 - 1206
Voltage	18Ω - 1MΩ
Capacitance	3250 - 4500K

### Leaded and Leadless NTC Thermistors

**+150°C**

- Rated at 150°C
- Leaded disc or high accuracy bead NTC
- Various coating options and configurations
- Leadless options – metallized disc or high accuracy chip
- Fast response, excellent reliability
- AEC-Q200 qualified, custom hi-rel testing

Operating Temp	-55°C to +150°C
Disc Size	2.4mm - 9mm
Resistance	68Ω - 1MΩ
B value (25/85)	3250 - 4840K
Tolerance	From ±1%

## ADVANCED TECHNOLOGY FILTERS

### Hermetic High Temperature Solder-Ins

**+200°C**

- Fully Hermetic design
  - 400°C installation temperature
  - -55°C to +200°C operating temperature
  - Epoxy free construction
  - MIL-PRF-31033 Discoidal Capacitor
  - Custom designs available.
- Contact AVX at [high.temp@avx.com](mailto:high.temp@avx.com)

Operating Temp	-55°C to +200°C
Case Size	WQ/XQ/YQ/ZQ
Voltage	20 - 300V
Capacitance	10pF - 1.4mF

# TANTALUM CAPACITORS

AVX is a worldwide leading supplier of tantalum capacitors. Tantalum capacitors provide high capacitance, high reliability, stable electrical performance under high temperature and no piezo noise effect.

Some of the innovative solutions include:

- **THJ Series**  
High temperature tantalum chip capacitors rated up to 175°C. Capacitance ranges from 0.1 $\mu$ F to 220 $\mu$ F with voltage ratings up to 50V.
- **THJ Series with Extension to 200°C**  
An extension of the THJ series, these SMD tantalum capacitors are rated up to 200°C with capacitance ranging from 10 $\mu$ F to 220 $\mu$ F.
- **TWC-Y Wet Tantalum**  
The TWC-Y high temperature series represents a COTS-Plus version of conventional wet electrolytic tantalum capacitors that are designed for use at 200°C. The components listed are now capable of 500 hours of operation at extreme temperature with the applicable derated voltage.
- **TWA-Y Wet Tantalum**  
**Coming Soon**  
Wet electrolytic tantalum capacitors with a hermetic welded tantalum can and header assembly and 200°C operating temperature rating. Contact factory for customized options.
- **THH 230°C Hermetic Series**  
High temperature SMD tantalum capacitors with ceramic hermetic seal. These components are rated for up to 230°C operating temperature up to 1000 hours at 50% rated voltage, and 200°C up to 10,000 hours at 50% rated voltage on selected codes.

### FEATURES

- Improved reliability – 2x standard
- 175°C @ 0.5V<sub>R</sub> continuous operation
- CV range: 0.10-220µF / 6.3-50V
- 5 case sizes available
- Low ESR options on approval
- High temperature automotive and industry applications

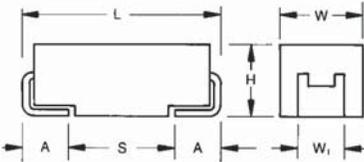

SnPb termination option is not RoHS compliant.

### APPLICATIONS

- Automotive ECU and ABS control electronics
- Geothermal instrumentation

### TECHNICAL SPECIFICATIONS

Technical Data:	All technical data relate to an ambient temperature of +25°C								
Capacitance Range:	0.10 µF to 220 µF								
Capacitance Tolerance:	±10%; ±20%								
Rated Voltage (V <sub>R</sub> )	≤ +85°C:	6.3	10	16	20	25	35	50	
Category Voltage (V <sub>C</sub> )	≤ +125°C:	4	7	10	13	17	23	33	
Category Voltage (V <sub>C</sub> )	≤ +175°C:	3	5	8	10	12	17	25	
Surge Voltage (V <sub>S</sub> )	≤ +85°C:	8	13	20	26	32	46	65	
Surge Voltage (V <sub>S</sub> )	≤ +125°C:	5	8	13	16	20	28	40	
Surge Voltage (V <sub>S</sub> )	≤ +175°C:	4	6	10	12	15	21	30	
Temperature Range:	-55°C to 175°C voltage derating.								
Reliability:	0.5% per 1000 hours at 85°C, V <sub>R</sub> with 0.1Ω/V series impedance, 60% confidence level, 3.5 Fits at 40°C, 0.5V <sub>R</sub>								
Termination Finish:	Sn Plating (standard), Gold Plating available on request								
	Meets requirements of AEC-Q200								

### CAPACITANCE AND RATED VOLTAGE RANGE (LETTER DENOTES CASE SIZE)

Capacitance		Rated voltage ( $V_R$ ) to 85°C (Voltage Code)

<sup>1)</sup> Dry pack option (see How to order) recommended for reduction of stress during soldering. Dry pack parts should be treated as MSL 3.

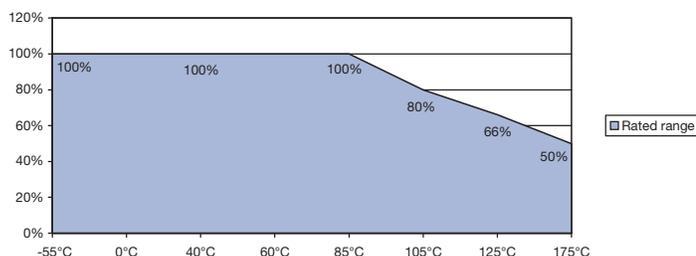

Moisture Sensitivity Level (MSL) is defined according to J-STD-020

All technical data relates to an ambient temperature of +25°C. Capacitance and DF are measured at 120Hz, 0.5V RMS with a maximum DC bias of 2.2 volts. DCL is measured at rated voltage after 5 minutes.

The EIA & CECC standards for low ESR Solid Tantalum Capacitors allow an ESR movement to 1.25 times catalogue limit post mounting.

**NOTE: AVX reserves the right to supply a higher voltage rating or tighter tolerance part in the same case size, to the same reliability standards.**

THJ 175°C Voltage vs Temperature Rating

### QUALIFICATION TABLE

TEST	THJ series (Temperature range -55°C to +175°C)									
	Condition			Characteristics						
Endurance	Determine after application of rated voltage for 2000 +48/-0 hours at 85±2°C and then leaving 1-2 hours at room temperature. Also determine of 175°C temperature, category voltage for 2000 +48/-0 hours and then leaving 1-2 hours at room temperature. Power supply impedance to be ≤0.1Ω/V.			Visual examination	no visible damage					
				DCL	1.25 x initial limit					
				ΔC/C	within ±10% of initial value					
				DF	initial limit					
				ESR	1.25 x initial limit					
Storage Life	175°C, 0V, 2000h			Visual examination	no visible damage					
				DCL	1.25 x initial limit					
				ΔC/C	within ±10% of initial value					
				DF	initial limit					
				ESR	1.25 x initial limit					
Biased Humidity	Determine after leaving for 1000 hours at 85±2°C, 85% relative humidity and rated voltage and then recovery 1-2 hours at room temperature.			Visual examination	no visible damage					
				DCL	2 x initial limit					
				ΔC/C	within ±10% of initial value					
				DF	1.2 x initial limit

### FEATURES

- SMD 200°C tantalum capacitor
- 200°C @ 0.33V<sub>R</sub> 1000hrs continuous operation
- Leakage current after 200°C 1000hrs less than 1mA
- 3x reflow 260°C
- Gold plated termination for hybrid assembly
- Oil drilling, aerospace, automotive applications
- CV range: 10-220μF / 10-16V
- 2 case sizes available

### APPLICATIONS

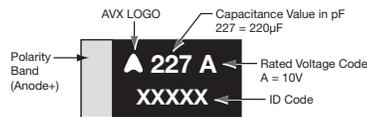

- Downhole drilling

\*Initial Limit

The TWC-Y high temperature series represents a COTS-Plus version of conventional wet electrolytic tantalum capacitors that are designed for use at 200°C. The components listed are now capable of 500 hours of operation at extreme temperature with the applicable derated voltage.

This design includes a welded tantalum can and header assembly that provides a hermetic seal to withstand harsh environments.

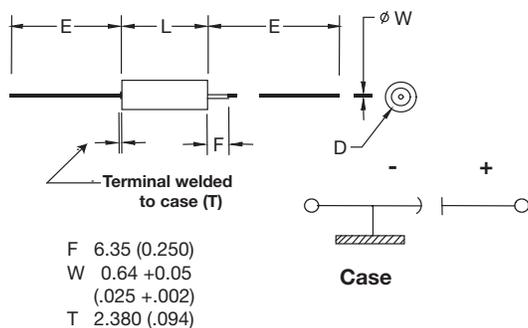

This is a new product line so please contact the factory for availability and additional details.

### OUTLINE DIMENSIONS

#### 200°C LIFE TEST:

These components are capable of 500 hours of operation at 200°C with the applicable 60% derated voltage. Following the life test components which are stabilized at 25°C ± 5°C shall exhibit:

Leakage less than 200% the original requirement or ± 10µA (whichever is greater)

ESR not greater than 200% the original requirement

Capacitance increase less than 10% or decrease less than 20% the initial measurement

All technical data relates to an ambient temperature of +25°C. Capacitance and DF are measured at 120Hz, 0.5RMS with DC bias of 2.2V. DCL is measured at rated voltage after 5 minutes. Note: AVX reserves the right to supply higher voltage rating in the same case size to the same reliability standards.

**PRELIMINARY VERSION SUBJECT TO CHANGE  
COMING SOON**

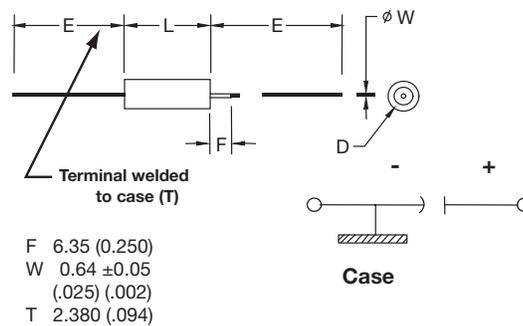

The TWA-Y series represents a high temperature version of conventional wet electrolytic Tantalum capacitors that are designed for use at 200°C. A high capacitance cathode system allows for high CV (capacitance/voltage) in standard case sizes.

Selected TWA-Y series values are capable of up to 2000 hours of operation at extreme temperatures with the applicable derated voltage.

This design includes a welded tantalum can and header assembly that provides a hermetic seal to withstand harsh shock and vibration requirements.

Contact the factory for additional options for customized component design.

1/ At 125°C the rated voltage of the capacitors decreases to 66 2/3 of the 85°C rated voltage.

2/ The peak of the applied ac ripple voltage plus the applied dc voltage must not exceed the dc voltage rating of the capacitors.

All technical data relates to an ambient temperature of +25°C. Capacitance and DF are measured at 120Hz, 0.5RMS with DC bias of 2.2V. DCL is measured at rated voltage after 5 minutes.

NOTE: AVX reserves the rights to supply higher voltage rating in the same case size, to the same reliability standards.

### FEATURES

- High temperature applications
- Operational temperature up to Ur to 230°C for 1000hrs service life \*
- Ceramic case hermetic packaging
- Stability under humidity and ambient atmosphere exposure
- Large case sizes including CTC-21D provide high capacitance values
- Manufacturing and screening utilizing AVX patented Q-Process to effectively remove components that may experience excessive parametric shifts or instability in operation life

\*Endurance qualification 200°C/0.5U<sub>P</sub>/10,000hrs on selected codes

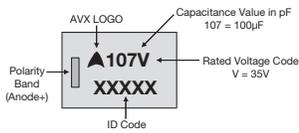

### APPLICATIONS

- Oil drilling
- Extreme temperature applications

For additional information on Q-process please consult the AVX technical publication "Reaching the Highest Reliability for Tantalum Capacitors" (see the link: <http://www.avx.com/docs/techinfo/Qprocess.pdf>)

All technical data relates to an ambient temperature of +25°C. Capacitance and DF are measured at 120Hz, 0.5V RMS with a maximum DC bias of 2.2 volts.

DCL is measured at rated voltage after 5 minutes.

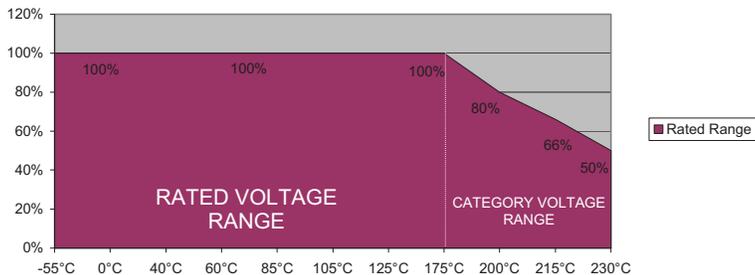

ESR change post 1000hrs allowed up to 3 times catalog limit.

Parts are aged at 230°C.

Moisture Sensitivity Level (MSL) is defined according to J-STD-020.

### TEMPERATURE VOLTAGE DERATING

THH 230°C Voltage vs Temperature Rating for 1000 hrs service life

### QUALIFICATION TABLE

TEST	THH 230°C hermetic series (Temperature range -55°C to +230°C)													
	Condition			Characteristics										
Endurance	Determine after application of rated voltage for 1000 +48/0 hours at 175±2°C and then leaving min. 2 hours at room temperature. Also determine of 200°C temperature, category voltage for 2000+48/-0 hours and then leaving min. 2 hours at room temperature. Also determine after application of 230°C temperature, category voltage for 1000+48/-0 hours and then leaving min. 2 hours at room temperature. Power supply impedance to be <3Ω.			Visual examination	no visible damage									
				DCL	1.25 x initial limit									
				ΔC/C	within ±20% of initial value									
				DF	1.5 x initial limit									
				ESR	3 x initial limit									
Endurance**	Determine after application of rated voltage for 200°C temperature, 0.5U <sub>R</sub> for 10000+48/-0 hours and then leaving min. 2 hours at room temperature. Power supply impedance to be <3Ω.			Visual examination	no visible damage									
				DCL	1.25 x initial limit									
				ΔC/C	within ±20% of initial value									
				DF	1.5 x initial limit									
				ESR	3 x initial limit									
Storage Life	230°C, 0V, 1000h + 48/-0 hours			Visual examination	no visible damage									
				DCL	initial limit									
				ΔC/C	within ±5% of initial value									
				DF	initial limit									
				ESR	1.25 x initial limit									
Biased Humidity	Determine after leaving for 1000 hours at 85±2°C, 85% relative humidity and rated voltage and then recovery min. 2 hours at room temperature.			Visual examination	no visible damage									
				DCL	initial limit									
				ΔC/C	within ±10% of initial value									
				DF	initial limit									
				ESR	1.25 x initial limit									
Temperature Stability	Step	Temperature°C	Duration (min)		+20°C	-55°C	+22°C	+85°C	+125°C	+175°C	+200°C	+230°C	+22°C

# CERAMIC CAPACITORS

Ceramic capacitors are the basic building block for every electronic design. AVX has a long history in manufacturing ceramic capacitors which enables us to offer a wide range of high temperature capacitors for down hole and mission critical applications.

- **AT Series**

Surface mount MLCCs with extended temperature range up to +200°C and +250°C, in C0G and VHT dielectrics.

- **X8R/X8L Dielectric**

MLCC performance elevated to accommodate high temperature applications up to +150°C.

- **FLEXITERM® and FLEXISAFE®**

Offer improved resistance against failures caused by board flexing and temperature shock.

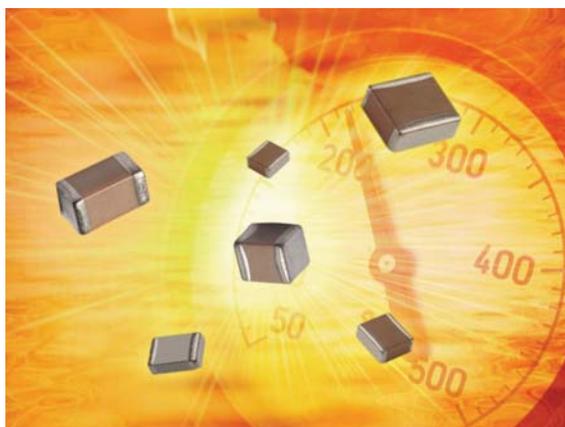

- **MLCC with Tin/Lead (Sn/Pb) Terminations**

Ceramic capacitors with Sn/Pb terminations and X8R dielectric for mission critical applications.

- **Radial Leaded SkyCap® AR Series**

Ceramic technology in leaded, epoxy encapsulated packaging for harsh environment applications.

Present military specifications, as well as a majority of commercial applications, require a maximum operating temperature of 125°C. However, the emerging market for high temperature electronics demands capacitors operating reliably at temperatures beyond 125°C. AVX's new high temperature chip capacitor product line, with verified capability of long-term operation up to 250°C is a response to both military and commercial business needs. The new capacitors demonstrate high current handling capabilities, high volumetric efficiency, high insulation resistance and low ESR/ESL. This product has been designed for the most demanding applications, such as "down-hole" oil exploration and aerospace programs.

### HOW TO ORDER

AT10	3	T	104	K	A	T	2	A
AVX Style	Voltage Code	Temperature Coefficient	Capacitance Code (2 significant digits + no. of zeros)	Capacitance Tolerance	Test Level	Termination*	Packaging	Special Code

*Voltage rated at 200°C or 250°C								

### ELECTRICAL SPECIFICATIONS

#### Temperature Coefficient

COG: A 0±30 ppm/°C, -55°C to +250°C

VHT: T ±15%, -55°C to +150°C

See TCC Plot for +250°C

#### Capacitance Test (MIL-STD-202, Method 305)

25°C, 1.0 ± 0.2 Vrms (open circuit voltage) @ 1kHz

#### Dissipation factor 25°C

COG: 0.15% Max at 1.0 ± 0.2 Vrms (open circuit voltage) @ 1kHz

VHT: 2.5% Max at 1.0 ± 0.2 Vrms (open circuit voltage) @ 1kHz

#### Insulation Resistance 25°C (MIL-STD-202, Method 302)

100GΩ or 1000MΩ.µF (whichever is less)

#### Insulation Resistance 125°C (MIL-STD-202, Method 302)

10GΩ or 100MΩ.µF (whichever is less)

#### Insulation Resistance 200°C (MIL-STD-202, Method 302)

1GΩ or 10MΩ.µF (whichever is less)

#### Insulation Resistance 250°C (MIL-STD-202, Method 302)

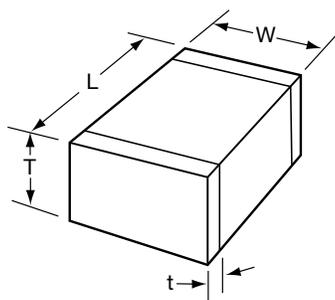

100MΩ or 1MΩ.µF (whichever is less)

#### Direct Withstanding Voltage 25°C (Flash Test)

250% rated voltage for 5 seconds with 50mA max charging current

(500 Volt units @ 750VDC)

Voltage rating per table. Capacitance values specified at 25°C, derate capacitance value based on TCC and VCC Plots on page 27.

NOTE: Contact factory for non-specified capacitance values.

AVX has developed a range of multilayer ceramic capacitors designed for use in applications up to 150°C. These capacitors are manufactured with an X8R and an X8L dielectric material. X8R material has capacitance variation of  $\pm 15\%$  between  $-55^{\circ}\text{C}$  and  $+150^{\circ}\text{C}$ . The X8L material has capacitance variation of  $\pm 15\%$  between  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  and  $+15\%$  to  $-40\%$  from  $+125^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$ .

The need for X8R and X8L performance has been driven by customer requirements for parts that operate at elevated temperatures. They provide a highly reliable capacitor with low loss and stable capacitance over temperature.

They are ideal for automotive under the hood sensors, and various industrial applications. Typical industrial application would be drilling monitoring system. They can also be used as bulk capacitors for high temperature camera modules.

Both X8R and X8L dielectric capacitors are automotive AEC-Q200 qualified. Optional termination systems, tin, FLEXITERM® and conductive epoxy for hybrid applications are available. Providing this series with our FLEXITERM® termination system provides further advantage to customers by way of enhanced resistance to both, temperature cycling and mechanical damage.

### APPLICATIONS FOR X8R AND X8L CAPACITORS

- All market sectors with a 150°C requirement
- Automotive on engine applications
- Oil exploration applications
- Hybrid automotive applications
  - Battery control
  - Inverter / converter circuits
  - Motor control applications
  - Water pump
- Hybrid commercial applications
  - Emergency circuits
  - Sensors
  - Temperature regulation

### ADVANTAGES OF X8R AND X8L MLC CAPACITORS

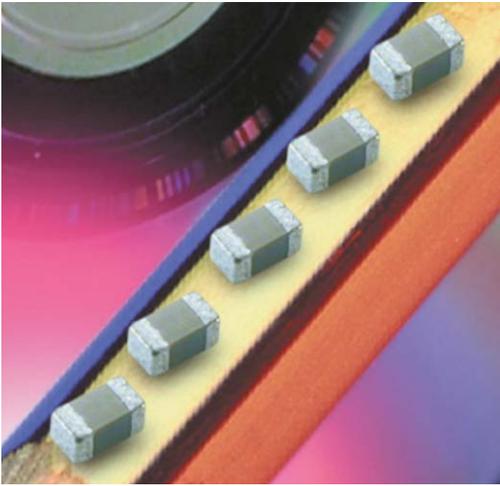

- Both ranges are qualified to the highest automotive AEC-Q200 standards
- Excellent reliability compared to other capacitor technologies
- RoHS compliant
- Low ESR / ESL compared to other technologies
- Tin solder finish
- FLEXITERM® available
- Epoxy termination for hybrid available
- 100V range available

### ENGINEERING TOOLS FOR HIGH VOLTAGE MLC CAPACITORS

- Samples
- Technical Articles
- Application Engineering
- Application Support

Parameter/Test		X8R/X8L Specification Limits	Measuring Conditions	
<b>Operating Temperature Range</b>		-55°C to +150°C	Temperature Cycle Chamber	
<b>Capacitance</b>		Within specified tolerance	Freq.: 1.0 kHz ± 10%	
<b>Dissipation Factor</b>		≤ 2.5% for ≥ 50V DC rating ≤ 3.5% for 25V DC and 16V DC rating	Voltage: 1.0Vrms ± .2V	
<b>Insulation Resistance</b>		100,000MΩ or 1000MΩ - μF, whichever is less	Charge device with rated voltage for 120 ± 5 secs @ room temp/humidity	
<b>Dielectric Strength</b>		No breakdown or visual defects	Charge device with 300% of rated voltage for 1-5 seconds, w/charge and discharge current limited to 50 mA (max) Note: Charge device with 150% of rated voltage for 500V devices.	
<b>Resistance to Flexure Stresses</b>	Appearance	No defects	Deflection: 2mm Test Time: 30 seconds 	
	Capacitance Variation	≤ ±12%		
	Dissipation Factor	Meets Initial Values (As Above)		
	Insulation Resistance	≥ Initial Value x 0.3		
<b>Solderability</b>		≥ 95% of each terminal should be covered with fresh solder	Dip device in eutectic solder at 230 ± 5°C for 5.0 ± 0.5 seconds	
<b>Resistance to Solder Heat</b>	Appearance	No defects, <25% leaching of either end terminal	Dip device in eutectic solder at 260°C for 60 seconds. Store at room temperature for 24 ± 2 hours before measuring electrical properties.	
	Capacitance Variation	≤ ±7.5%		
	Dissipation Factor	Meets Initial Values (As Above)		
	Insulation Resistance	Meets Initial Values (As Above)		
	Dielectric Strength	Meets Initial Values (As Above)		
<b>Thermal Shock</b>	Appearance	No visual defects	Step 1: -55°C ± 2°	30 ± 3 minutes
	Capacitance Variation	≤ ±7.5%	Step 2: Room Temp	≤ 3 minutes
	Dissipation Factor	Meets Initial Values (As Above)	Step 3: +125°C ± 2°	30 ± 3 minutes
	Insulation Resistance	Meets Initial Values (As Above)	Step 4: Room Temp	≤ 3 minutes
	Dielectric Strength	Meets Initial Values (As Above)	Repeat for 5 cycles and measure after 24 ± 2 hours at room temperature	
<b>Load Life</b>	Appearance	No visual defects	Charge device with 1.5 rated voltage (≤ 10V) in test chamber set at 150°C ± 2°C for 1000 hours (+48, -0)  Remove from test chamber and stabilize at room temperature for 24 ± 2 hours before measuring.	
	Capacitance Variation	≤ ±12.5%		
	Dissipation Factor	≤ Initial Value x 2.0 (See Above)		
	Insulation Resistance	≥ Initial Value x 0.3 (See Above)		
	Dielectric Strength	Meets Initial Values (As Above)		
<b>Load Humidity</b>	Appearance	No visual defects	Store in a test chamber set at 85°C ± 2°C/ 85% ± 5% relative humidity for 1000 hours (+48, -0) with rated voltage applied.  Remove from chamber and stabilize at room temperature and humidity for 24 ± 2 hours before measuring.	
	Capacitance Variation	≤ ±12.5%		
	Dissipation Factor	≤ Initial Value x 2.0 (See Above)		
	Insulation Resistance	≥ Initial Value x 0.3 (See Above)		
	Dielectric Strength	Meets Initial Values (As Above)		

With increased requirements from the automotive industry for additional component robustness, AVX recognized the need to produce a MLCC with enhanced mechanical strength. It was noted that many components may be subject to severe flexing and vibration when used in various under the hood automotive and other harsh environment applications.

To satisfy the requirement for enhanced mechanical strength, AVX had to find a way of ensuring electrical integrity is maintained whilst external forces are being applied to the component. It was found that the structure of the termination needed to be flexible and after much research and development, AVX launched FLEXITERM®. FLEXITERM® is designed to enhance the mechanical flexure and temperature cycling performance of a standard ceramic capacitor with an X7R dielectric. **The industry standard for flexure is 2mm minimum. Using FLEXITERM®, AVX provides up to 5mm of flexure without internal cracks. Beyond 5mm, the capacitor will generally fail “open”.**

As well as for automotive applications FLEXITERM® will provide Design Engineers with a satisfactory solution when designing PCB's which may be subject to high levels of board flexure.

## APPLICATIONS

### High Flexure Stress Circuit Boards

- e.g. Depanelization: Components near edges of board.

### Variable Temperature Applications

- Soft termination offers improved reliability performance in applications where there is temperature variation.
- e.g. All kind of engine sensors: Direct connection to battery rail.

### Automotive Applications

- Improved reliability.
- Excellent mechanical performance and thermo mechanical performance.

## PRODUCT ADVANTAGES

- High mechanical performance able to withstand, 5mm bend test guaranteed.
- Increased temperature cycling performance, 3000 cycles and beyond.
- Flexible termination system.
- Reduction in circuit board flex failures.
- Base metal electrode system.
- Automotive or commercial grade products available.

### PERFORMANCE TESTING

#### AEC-Q200 Qualification:

- Created by the Automotive Electronics Council
- Specification defining stress test qualification for passive components

#### Testing:

Key tests used to compare soft termination to AEC-Q200 qualification:

- Bend Test
- Temperature Cycle Test

### BOARD BEND TEST PROCEDURE

According to AEC-Q200

Test Procedure as per AEC-Q200:

Sample size: 20 components  
Span: 90mm Minimum deflection spec: 2 mm

- Components soldered onto FR4 PCB (Figure 1)
- Board connected electrically to the test equipment (Figure 2)

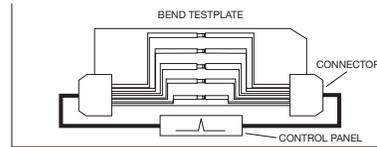

Fig 1 - PCB layout with electrical connections

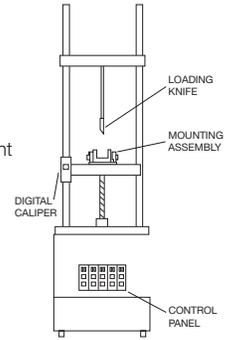

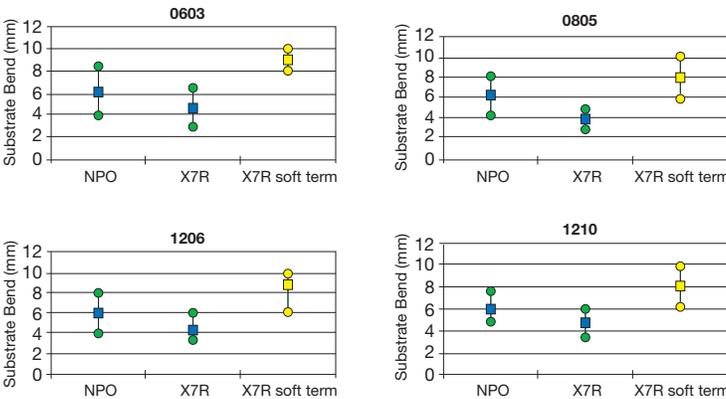

Fig 2 - Board Bend test equipment

### BOARD BEND TEST RESULTS

AEC-Q200 Vrs AVX FLEXITERM<sup>®</sup> Bend Test

### TABLE SUMMARY

Typical bend test results are shown below:

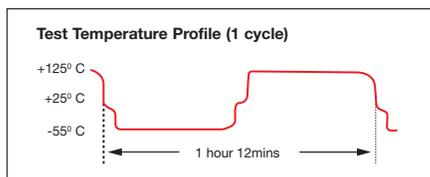

Style	Conventional Termination	FLEXITERM <sup>®</sup>
0603	>2mm	>5mm
0805	>2mm	>5mm
1206	>2mm	>5mm

### TEMPERATURE CYCLE TEST PROCEDURE

#### Test Procedure as per AEC-Q200:

The test is conducted to determine the resistance of the component when it is exposed to extremes of alternating high and low temperatures.

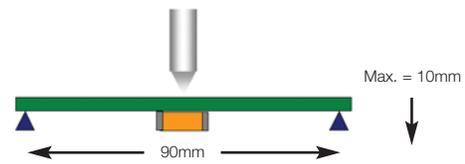

- Sample lot size quantity 77 pieces
- TC chamber cycle from -55°C to +125°C for 1000 cycles
- Interim electrical measurements at 250, 500, 1000 cycles
- Measure parameter capacitance dissipation factor, insulation resistance

### AVX ENHANCED SOFT TERMINATION BEND TEST PROCEDURE

#### Bend Test

The capacitor is soldered to the printed circuit board as shown and is bent up to 10mm at 1mm per second:

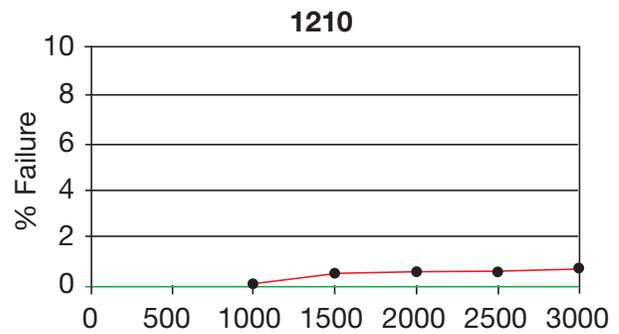

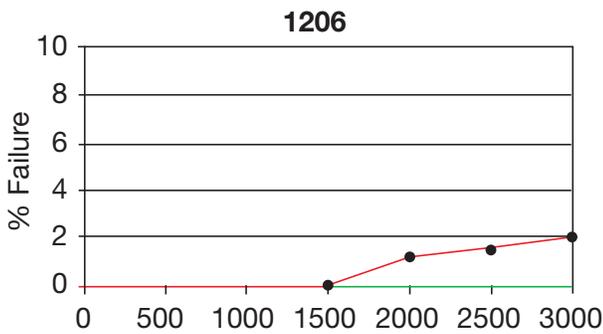

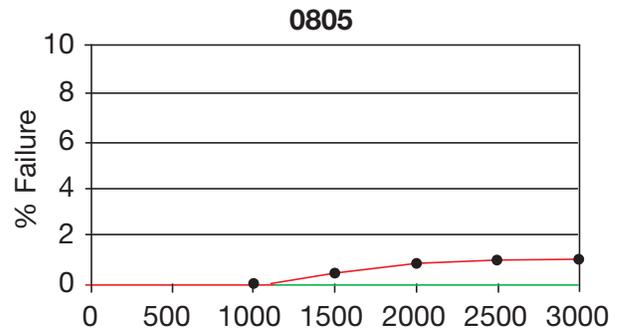

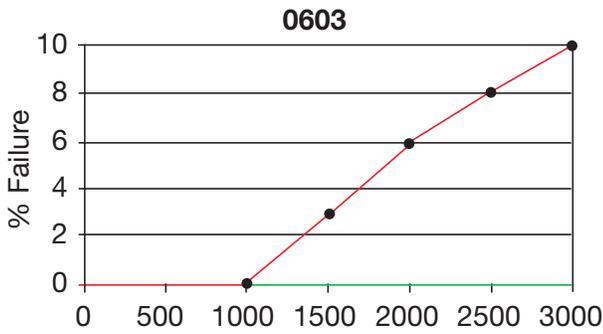

- The board is placed on 2 supports 90mm apart (capacitor side down)
- The row of capacitors is aligned with the load stressing knife

- The load is applied and the deflection where the part starts to crack is recorded (Note: Equipment detects the start of the crack using a highly sensitive current detection circuit)
- The maximum deflection capability is 10mm

**BEYOND 1000 CYCLES: TEMPERATURE CYCLE TEST RESULTS**

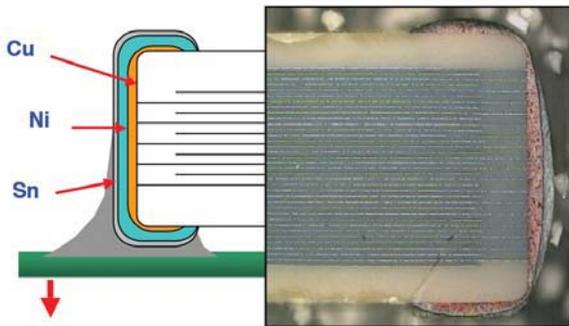

**Soft Term - No Defects up to 3000 cycles**

**AEC-Q200 specification states 1000 cycles compared to AVX 3000 temperature cycles.**

**FLEXITERM® TEST SUMMARY**

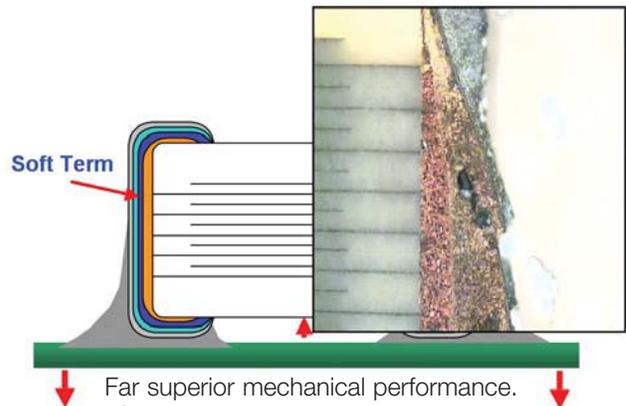

- Qualified to AEC-Q200 test/specification with the exception of using AVX 3000 temperature cycles (up to +150°C bend test guaranteed greater than 5mm).
- FLEXITERM® provides improved performance compared to standard termination systems.
- Board bend test improvement by a factor of 2 to 4 times.
- Temperature Cycling:
  - 0% Failure up to 3000 cycles
  - No ESR change up to 3000 cycles

**WITHOUT SOFT TERMINATION**

Major fear is of latent board flex failures.

**WITH SOFT TERMINATION**

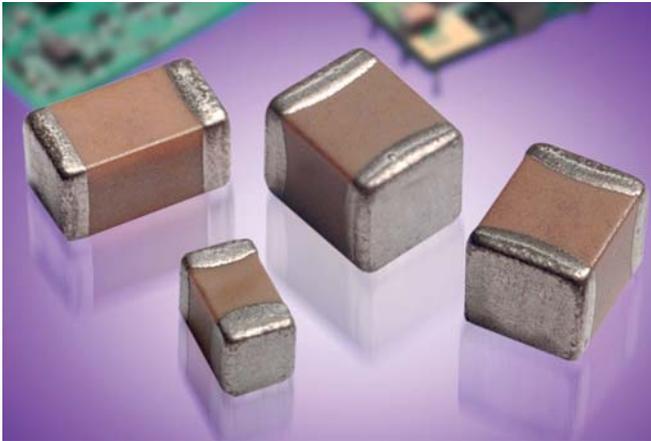

Far superior mechanical performance. Generally open failure mode beyond 5mm flexure.

AVX Corporation will support those customers for commercial and military Multilayer Ceramic Capacitors with a termination consisting of 5% minimum lead. This termination is indicated by the use of a "B" in the 12th position of the AVX Catalog Part Number. This fulfills AVX's commitment to providing a full range of products to our customers. AVX has provided in the following pages a full range of values that we are currently offering in this special "B" termination. Please contact the factory if you require additional information on our MLCC Tin/Lead Termination "B" products.

**Not RoHS Compliant**

	PAPER					EMBOSSSED							

AVX AR Series is a conformally coated radial leaded capacitor. We offer X8R dielectric, standard, with a 50V rating.

### Conformally Coated Radial Leaded MLC

**Temperature Coefficients:** COG (NP0), X7R, X8R

**3000, 2000, 1000, 200, 100, 50 Volts**

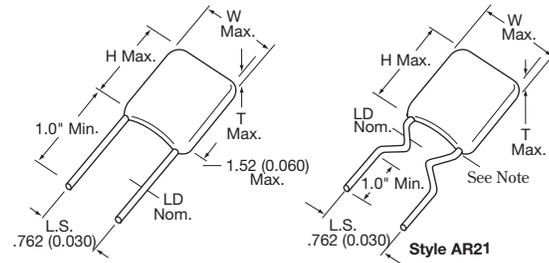

**Case Material:** Epoxy

**Lead Material:** RoHS Compliant, 100% Tin

**Qualified:** to AEC-Q200, PPAP Available

**Temperature Range:** up to 150°C

Dimensions: Millimeters (Inches)

Styles AR15, AR20, AR30, AR40

Note: Coating clean .784 (0.031) min. above seating plane

Drawings are for illustrative purposes only. Actual lead form shape could vary within stated tolerances based on body size.

**Notes:**

"Insertable" make reference to alternative AVX style using the same range of capacitance available on the matrix.  
 For others Styles, voltages, tolerance and lead lengths see Skycap catalog or contact factory.  
 Others capacitance values available upon special request.  
 Others styles available: AR12, AR14, AR62, AR89.

\*SL style available in all SR configurations.

- NOTES:**
1. All leads are #24 AWG unless otherwise noted.
  2. Available in tape and reel packaging(\*).
  3. Other styles are also available, contact factory.
  4. (T = XXX) under type designation is maximum thickness in inches.

\*SL style available in all SR configurations.

Drawings are for illustrative purposes only. Actual lead form shape could vary within stated tolerances based on body size.

## GENERAL INFORMATION

1. Standard reel diameter is 355 millimeters (14 inches) maximum.
2. Reeling standard (#1 or #2) should be specified when ordering.

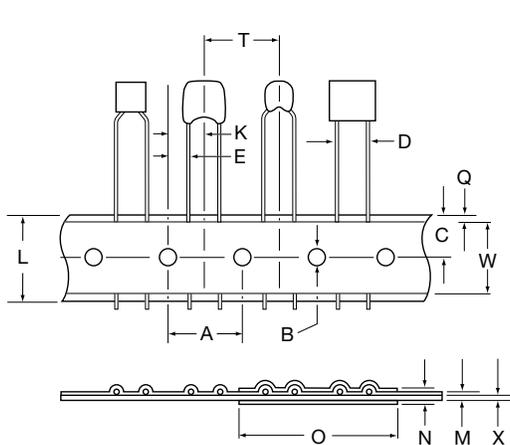

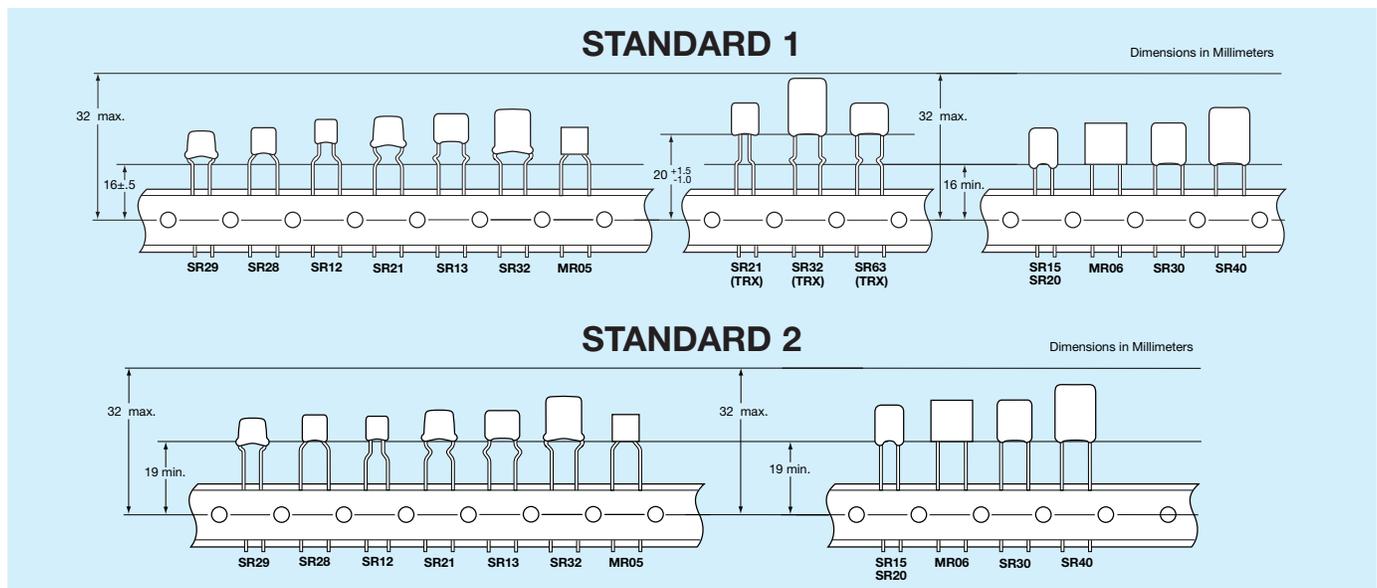

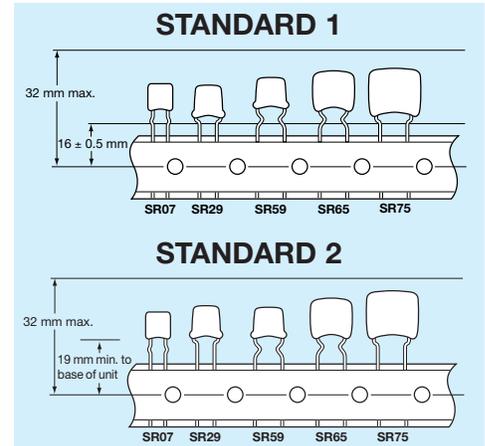

## HOW TO ORDER

To specify tape and reel packaging, add TR1, TR2 or TRX to the end of the AVX 12 digit part number.

Examples:

SR215C104KARTR1  
SR305E105MARTR2  
SR215C103JARTRX

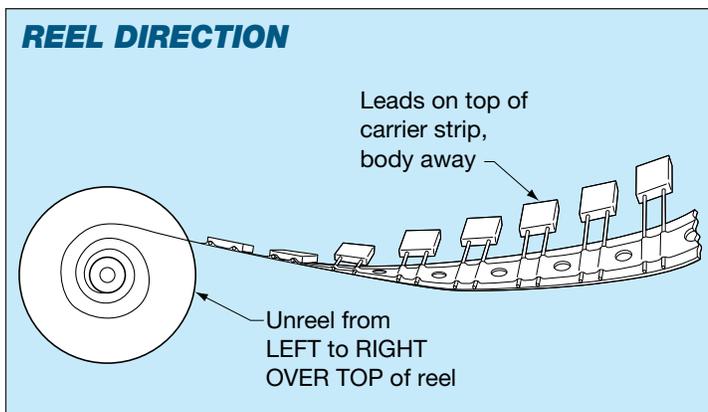

## THE INSERTABLES

# SWITCHED MODE POWER SUPPLY (SMPS) CAPACITORS

AVX SMPS capacitors utilize multilayer ceramic capacitor technology to achieve higher capacitance, voltage and high resistance to harsh high temperature environments.

Innovative solutions include:

- **SMX SMPS Stacked MLCCs**  
AVX SMX capacitors are stacked SMPS capacitors ideally suited for high temperature applications up to +200°C. The wide product offering provides designers with solutions exhibiting high capacitance and high voltage ratings that are rated up to +200°C.
- **SXP SMPS Molded Radial MLCCs**  
AVX encapsulated radial leaded MLCCs ideally suited for high temperature applications up to +200°C. This product offers mechanical protection to the ceramic element ensuring reliable operation in harsh environment applications.

# SMPS Stacked MLC Capacitors

## SMX Style for High Temperature Applications up to 200°C

SMX-style, stacked Switch Mode Power Supply Capacitors (SMPS) utilizing Multilayer Ceramic (MLCC) construction are ideally suited for high temperature applications up to 200°C. This product is intended for downhole oil exploration, including logging while drilling, geophysical probes, as well as space and aerospace electronics. The high temperature solder utilized in the construction of SMX-style parts assures reliable operation in harsh environments. The wide product offering provides designers a solution for high capacitance value and high voltage capacitors rated at 200°C. The SMX-style capacitors are ideally suited for applications as DC filters in high power, high frequency motor drives, high pulsed-current circuitry, as well as low power electronics.

SMX-style, SMPS capacitors are characterized with excellent performance in comparison to wet tantalum products. The main benefits of SMX-product over wet tantalum capacitors include:

- Much lower ESR and lower losses
- Excellent capacitance retention with frequency
- Excellent high frequency performance
- Low DC leakage current
- Much higher current handling capabilities

## ELECTRICAL SPECIFICATIONS

### Temperature Coefficient

COG: A Temperature Coefficient 0 ±30 ppm/°C, -55° to +200°C  
 X7R/X9U: C Temperature Coefficient ±15%, -55°C to +125°C  
 +15% - 56%, -55°C to +200°C

**Capacitance Test** (MIL-STD-202 Method 305)  
 25°C, 1.0±0.2 Vrms (open circuit voltage) at 1KHz

### Dissipation Factor 25°C

COG: 0.15% Max @ 25°C, 1.0±0.2 Vrms (open circuit voltage) at 1KHz  
 X7R/X9U: 2.5% Max @ 25°C, 1.0±0.2 Vrms (open circuit voltage) at 1KHz

**Insulation Resistance 25°C** (MIL-STD-202 Method 302)  
 100K MΩ or 1000 MΩ-μF, whichever is less.

**Insulation Resistance 125°C** (MIL-STD-202 Method 302)  
 10K MΩ or 100 MΩ-μF, whichever is less.

**Insulation Resistance 200°C** (MIL-STD-202 Method 302)  
 100 MΩ or 1 MΩ -μF, whichever is less.

**Dielectric Withstanding Voltage 25°C** (Flash Test)  
 250% rated voltage for 5 seconds with 50 mA max charging current. (500 Volt units @ 750 VDC)

**Moisture Resistance** (MIL-STD-202 Method 106)  
 Ten cycles with no voltage applied.

**Thermal Shock** (MIL-STD-202 Method 107, Condition A)

**Immersion Cycling** (MIL-STD-202 Method 104, Condition B)

**Resistance To Solder Heat** (MIL-STD-202, Method 210, Condition B, for 20 seconds)

SXP-style, encapsulated radial leaded MLC capacitors are ideally suited for high temperature applications up to 200°C. This product is intended for downhole oil exploration, including logging while drilling, geophysical probes, as well as space, aerospace and hybrid automotive applications. This product supplements the SMX family of capacitors and offers mechanical protection to the ceramic element in extreme harsh environment. The high temperature solder utilized in the construction of SXP-style parts assures reliable operation in high temperature and rugged environments. The SXP-style capacitors are ideally suited for applications as DC filters in high power, high frequency motor drives, high pulsed-current circuitry, as well as standard electronic equipment designed for high temperature applications.

SXP-style, switch mode power supply capacitors are characterized with excellent performance. The main benefits of SXP product include:

- Low ESR, low ESL
- Low DC leakage
- Excellent high frequency performance

## GLASS DIELECTRIC

AVX glass capacitors offer optimum, highly stable performance in harsh environments, capacitance retraceability, and a rugged, simple construction to eliminate mechanical problems.

### HEAT

It's the enemy of reliable, long-term circuit performance. In many applications, very high temperatures are not a consideration in circuit design. But in a few specialized areas, elevated temperatures create very real design problems.

That's why AVX ET-Series capacitors keep working at temperatures where more ordinary capacitors usually fail...up to 200°C.

And, of course, AVX ET-Series capacitors provide all the high performance,

high reliability characteristics you've come to expect from all AVX glass capacitors...excellent stability, outstanding capacitance retraceability, rugged, simple construction to eliminate mechanical problems, and electrical performance specifications among the best available at any price.

So when the heat's on your next design and you can't alter the environment, choose AVX ET-Series glass capacitors. That'll be one less problem you'll have to solve.

### FEATURES

- Available in both axial and radial leaded configurations
- Values from 0.5 pF to 2400 pF
- Working temperature range -75°C to 200°C
- "Burned In" versions available – 50 hours @ 1500 VDC, 25°C
- Simple, rugged design and construction
- Short lead times for most values

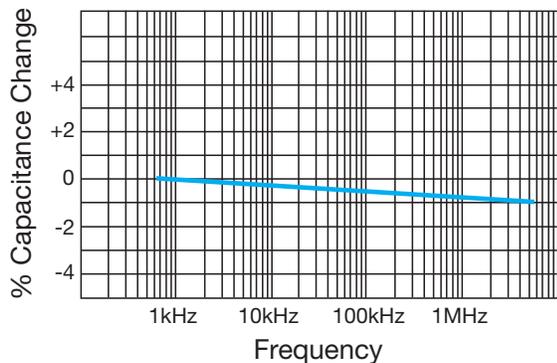

## STANDARD OPERATING CHARACTERISTICS OF AVX ET-SERIES AXIAL AND RADIAL LEADED GLASS CAPACITORS

Working Temperature Range	-75°C to 200°C
Voltage Rating	50 VDC
Capacitance Range	0.5 pF to 2400 pF
Insulation Resistance	@ 25°C > 100,000 Megohms @ 200°C > 100 Megohms
Dissipation Factor	@ 25°C < .1% at 1kHz @ 200°C < 1% at 1kHz
Life	(1000 hours at rated voltage at 200°C) Post Test Delta C @ 25°C < 2% DF @ 25°C < 2.5% IR > 100 Megohms (axials) IR > 10 Megohms (radials)
Short Time (1 Hour) Exposure to Overtemperature (250°C)	No degradation
Voltage Coefficient	0

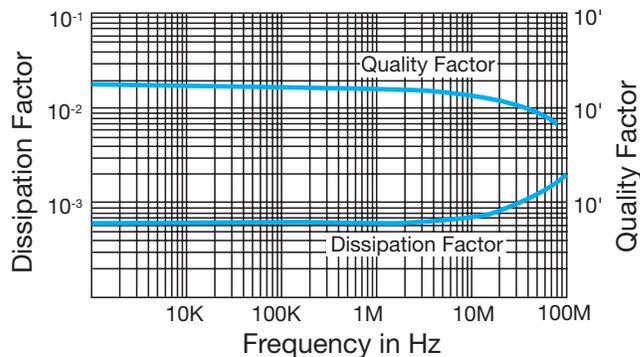

### TYPICAL APPLICATIONS

In general, AVX ET-Series glass capacitors are ideally suited for any environment where high temperature could alter or destroy circuit performance. And since they are rated down to -75°C, ET-Series capacitors are also useful where cycling to colder temperatures may be a problem. Some applications where AVX ET-Series capacitors have already proven themselves include:

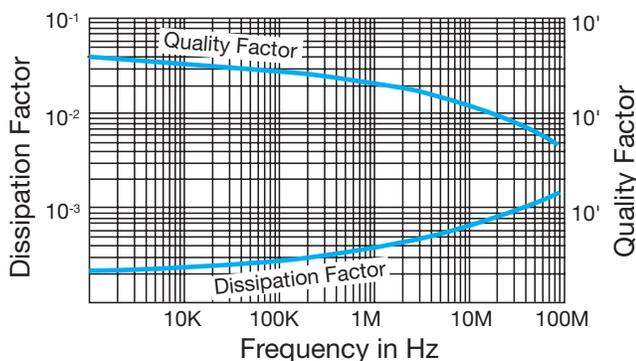

- Oil, well logging and downhole instrumentation, where frictional or geothermal heat is a problem.
- Geophysical pressure probes.
- Missile or aerospace applications where engine or environmental heat needs to be monitored or may cause circuit failure.
- Radar or other microwave applications.
- RF output circuitry where conduction or fan cooling cannot be entirely relied upon to remove all of the heat.
- Space and satellite applications where temperature changes are extreme and "zero failures" are a must.
- Industrial chemical process instrumentation where heat is a part of the process.
- Instrumentation for monitoring at-the-tool performance in metal cutting machinery.
- Fire-safe alarm or control circuitry.

### INTRODUCTION

AVX ET-Series axial leaded glass capacitors\* are available in two standard case sizes and in a wide range of values and tolerances. All feature extremely stable glass dielectric, fused monolithic construction and true glass-to-metal hermetic seals at the leads for moisture resistance. All case sizes conform to industry dimensional standards.

### PERFORMANCE CHARACTERISTICS

**Tolerance:** Available tolerances for each capacitance value are shown in the ordering information table on following page. Part marking codes are also provided.

**Temperature Coefficient:** Capacitance exhibits retraceability to within 10 ppm/°C over the temperature range -75°C to +200°C. See graph on following page.

**Voltage Coefficient:** Zero

**Losses:** Extremely low over the entire specified operating temperature range. Dissipation factor is 1% or less at 200°C at 1kHz.

**Life:** Delta C is less than 2% after 1000 hours at rated voltage, 200°C.

**Insulation Resistance:** Greater than 100,000 megohms at 25°C; greater than 100 megohms at 200°C. More than 100 megohms after life-testing.

**Voltage/Temperature Rating:** All ET-Series capacitors are rated at 50 VDC over their operating temperature range of -75°C to 200°C. No derating is required.

**High Voltage Stabilization Screening:** A special version of ET-Series axial leaded capacitors – designated ETR – is available. These capacitors have been “burned in” at room temperature for 50 hours at 1500 VDC.

**Short Time Overtemperature Exposure:** After exposure to 250°C for one hour, ET-Series capacitors have continued to perform to specification.

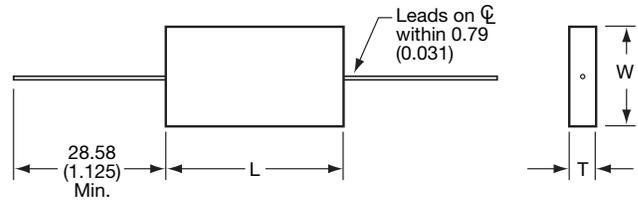

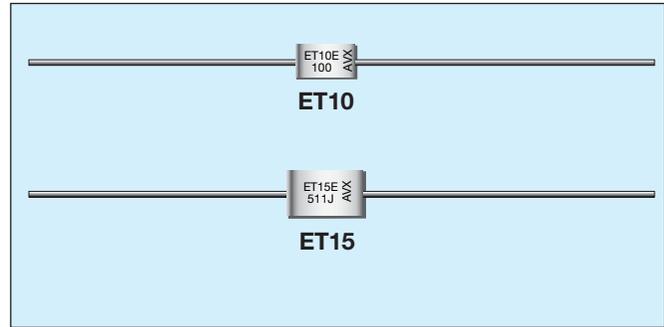

**Moisture Resistance:** Axial glass capacitors are hermetically sealed in glass, with a true metal-to-glass seal at the leads. This construction provides practical immunity to environmental effects such as shock, moisture, salt spray and solder heat.

Additional performance details are given in the AVX “Performance Characteristics of Multilayer Glass Dielectric Capacitors” technical paper.

\*Radiation Resistance to the same level as the CY, CYR axial series.

### INTRODUCTION

AVX ET-Series radial leaded glass capacitors are available in a broad range of tolerances and values in three case sizes. The fused monolithic capacitive element is housed in a miniature rectangular molded case for high packaging efficiency in circuit board applications. The gold-plated Dumet leads can be soldered or welded.

### PERFORMANCE CHARACTERISTICS

**Tolerance:** The ordering information table on the opposite page gives the available tolerances and values. An explanation of the part marking code is also provided.

**Temperature Coefficient:** Capacitance exhibits retraceability to within 10 ppm/°C over the temperature range -75°C to 200°C. See graph on following page.

**Voltage Coefficient:** Zero

**Losses:** Over the specified temperature range, losses are very low. At 200°C, 1kHz, the dissipation factor is 1% or less.

**Life:** Delta C is less than 2% after 1000 hours at rated voltage, 200°C.

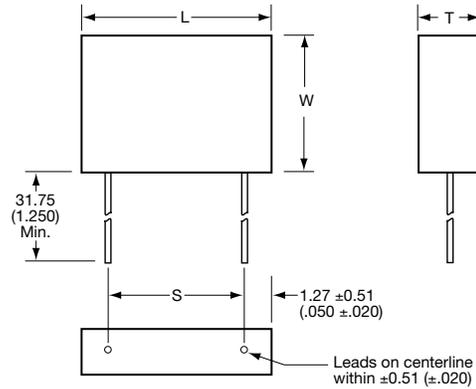

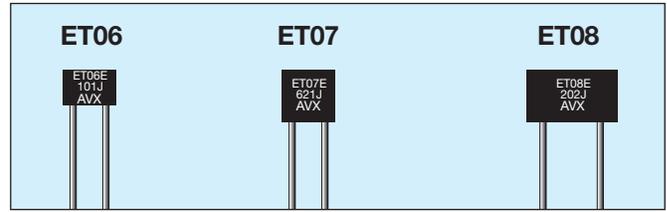

**Insulation Resistance:** 100,000 megohms or greater at 25°C; 100 megohms or greater at 200°C. More than 10 megohms after 1000 hour life-test.

**Voltage/Temperature Rating:** All ET-Series capacitors are rated at 50 VDC over the operating temperature range of -75°C to 200°C. Derating is not required.

**High Voltage Stabilization Screening:** A special version of ET-Series radial leaded capacitors – designated ETR – is available. These capacitors have been “burned in” at room temperature for 50 hours at 1500 VDC.

**Short Time Overtemperature Exposure:** After exposure to 250°C for one hour, ET-Series capacitors have continued to perform to specification.

Additional performance details are given in the AVX “Performance Characteristics of Multilayer Glass Dielectric Capacitors” technical paper.

Solutions include:

- **AQ Series**

Porcelain and ceramic dielectric MLCCs best suited for applications from 10 MHz to 4.2GHz. Components are specified up to 175°C operating temperature.

- **SQ Series**

RF/microwave capacitors with ultra low ESR suitable for RF power amplifier applications. Components are specified up to 175°C operating temperature.

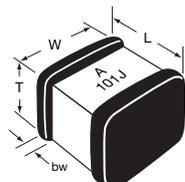

These porcelain and ceramic dielectric multilayer capacitor (MLC) chips are best suited for RF/ Microwave applications typically ranging from 10 MHz to 4.2 GHz. Characteristic is a fine grained, high density, high purity dielectric material impervious to moisture with heavy internal palladium electrodes.

These characteristics lend well to applications requiring:

- 1) high current carrying capabilities;
- 2) high quality factors;
- 3) very low equivalent series resistance;
- 4) very high series resonance;
- 5) excellent stability under stresses of changing voltage, frequency, time and temperature.

### PACKAGING

Standard Packaging = Waffle Pack (maximum quantity is 80)

**TAPE & REEL:** All tape and reel specifications are in compliance with EIA RS481 (equivalent to IEC 286 part 3).

Sizes SQCA through SQCB, CDR11/12 through 13/14.

- 8mm carrier
- 7" reel: ≤0.040" thickness = 2000 pcs  
                   ≤0.075" thickness = 2000 pcs
- 13" reel: ≤0.075" thickness = 10,000 pcs

**Not RoHS Compliant**

*For RoHS compliant products, please select correct termination style.*

### ENVIRONMENTAL CHARACTERISTICS

AVX SQLB will meet and exceed the requirements of EIA-198, MIL-PRF-55681 and MIL-PRF-123

Thermal Shock	Mil-STD-202, Method 107, Condition A
Moisture Resistance	Mil-STD-202, Method 106
Low Voltage Humidity	Mil-STD-202, Method 103, condition A, with 1.5 VDC applied while subjected to an environment of 85°C with 85% relative humidity for 240 hours
Life Test	Mil-STD-202, Method 108, for 2000 hours at 125°C
Shock	Mil-STD-202, Method 213, Condition J
Vibration	Mil-STD-202, Method 204, Condition B
Immersion	Mil-STD-202, Method 104, Condition B
Salt Spray	Mil-STD-202, Method 101, Condition B
Solderability	Mil-STD-202, Method 208
Terminal Strength	Mil-STD-202, Method 211
Temperature Cycling	Mil-STD-202, Method 102, Condition C
Barometric Pressure	Mil-STD-202, Method 105, Condition B
Resistance to Solder Heat	Mil-STD-202, Method 210, Condition C

SQCB (1111) are AVX's Ultra Low ESR microwave capacitors. Suitable for RF Power Amplifiers, they come in non-mag termination for MRI applications. They offer very High Q & resonant frequency and power handling capability.

### FEATURES:

- Low ESR
- High Q
- High Self Resonance
- Capacitance Range  
0.1 pF to 5100 pF
- 175°C Capability SQCB

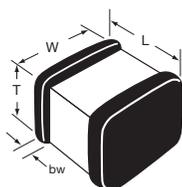

### APPLICATIONS:

- RF Power Amplifiers
- Low Noise Amplifiers
- Filter Networks
- MRI Systems

# CIRCUIT PROTECTION & SIGNAL INTEGRITY

AVX multi-layer varistors (MLVs) help to protect sensitive electronic systems against electrostatic discharge (ESD) and other transients while reducing EMI/RFI.

High temperature circuit protection solutions include:

- **High Temperature CANBUS MLV**

Multi-Layer varistors designed and manufactured for protecting high frequency CANBUS communications lines in high temperature applications. Products have been tested, qualified, and specified to 150°C.

- **High Temperature Low Leakage MLV**

Multi-Layer varistors designed and manufactured for high temperature applications requiring low leakage circuit protection components. Products have been tested, qualified, and specified to 150°C.

- **Radial Leaded High Temperature MLV**

High Temperature Multi-Layer Varistors designed for protection and EMI/RFI filtering of sensitive circuits in high temperature applications. These varistors have been built for durability in harsh environments. Products have been tested, qualified, and specified to 150°C.

AVX High Temperature Multi-Layer Varistors are designed for underhood applications. Products have been tested, qualified, and specified to 150°C. The MLV advantage is EMI/RFI attenuation in the off state. This allows designers the ability to combine the circuit protection and EMI/RFI attenuation function into a single highly reliable device.

### FEATURES

- Operating Temperature: -55°C to +150°C
- AEC Q200 qualified
- ESD rating to 25kV contact
- EMI/RFI attenuation in off state
- Excellent current and energy handling

### APPLICATIONS

- Under hood
- Down Hole Drilling
- High temperature applications
- Communication Bus
- Sensors
- RF Circuits
- Capacitance sensitive applications and more

### GENERAL DESCRIPTION

AVX High Temperature Low Leakage Multi-Layer Varistors are designed for under-hood and high temperature applications where low leakage component is required. Parts are tested, qualified and specified to 150°C.

The MLV advantage is EMI/RFI attenuation in the off state. This allows designers the ability to combine the circuit protection and EMI/RFI attenuation function into a single highly reliable device.

### GENERAL CHARACTERISTICS

- Operating Temperature: -55°C to 150°C

### FEATURES

- Rated at 150°C
- AEC Q200 qualified
- ESD rating to 25kV (HBM ESD Level 6)
- EMI/RFI attenuation in off state
- Very Low Leakage

### APPLICATIONS

- Under hood
- High temperature applications
- Bus Interface Protection
- CAN Bus
- BCM, TCU
- Capacitance sensitive applications and more

## GENERAL DESCRIPTION

AVX High Temperature Multi-Layer Varistors are designed for underhood applications. Products have been tested, qualified, and specified to 150°C. The Radial Leaded TransGuard is built for durability in harsh environments. The MLV advantage is EMI/RFI attenuation in the off state. This allows designers to combine the circuit protection and EMI/RFI attenuation function into a single highly reliable device.

## GENERAL CHARACTERISTICS

- Operating Temperatures:  
-55°C to +150°C
- Working Voltage:  
14-48Vdc

## FEATURES

- Rated at 150°C
- AEC Q200 qualified
- ESD rated to 25kV (HBM ESD Level 6)
- EMI/RFI attenuation in off state
- Excellent current and energy handling

## APPLICATIONS

- Under hood
- Down Hole Drilling
- DC Motors
- Relays
- Inductive Loads
- High Temperature/Harsh environment and more

# NTC THERMISTORS

AVX NTC thermistors are high quality devices that can be used for temperature compensation, temperature control and high in-rush current protection of sensitive circuitry.

NTC Thermistor Solutions Include:

- **NTC SMD Thermistors**  
NTC thermistors especially developed for surface mounting applications, available in 0603, 0805 and 1206 case sizes. Products are specified to +150°C.
- **NTC Leaded Disc Thermistors**  
Leaded thermistors designed and built for harsh environment applications. Products are specified to +150°C

Chip thermistors are a high quality and low cost device especially developed for surface mounting applications. They are widely used for temperature compensation but can also achieve temperature control of printed circuits.

A nickel barrier metallization provides outstanding qualities of solderability and enables this chip to meet the requirements of the most severe soldering processes.

### APPLICATIONS

- LCD compensation
- CD players
- Heating systems
- Air-conditioning systems
- Compensation of pressure sensors
- Temperature control of Switch Mode Power Supplies
- Protection of power transistors in various electronic circuits

Chip thermistors are a high quality and low cost device especially developed for surface mounting applications. They are widely used for temperature compensation but can also achieve temperature control of printed circuits. Its silver - palladium - platinum metallization provides a high degree of resistance to dewetting of the terminations during soldering (typically 260°C / 30 s).

### SURFACE MOUNTING GUIDE CHIP THERMISTOR – APPLICATION NOTES

#### STORAGE

Good solderability is maintained for at least twelve months, provided the components are stored in their “as received” packaging at less than 40°C and 70% RH.

#### SOLDERABILITY / LEACHING

Terminations to be well soldered after immersion in a 60/40 tin/lead solder bath at  $235 \pm 5^\circ\text{C}$  for  $2 \pm 1$  seconds.

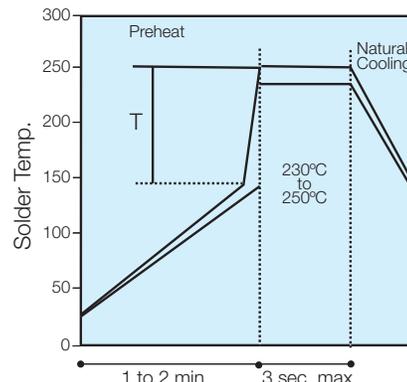

Terminations will resist leaching for at least the immersion times and conditions recommendations shown below.

P/N	Termination Type	Solder Tin/Lead	Solder Temp °C	Immersion Time Seconds
NC	AgPdPt	60/40	$260 \pm 5$	15 max
NB	Nickel Barrier	60/40	$260 \pm 5$	$30 \pm 1$

NB products are compatible with a wide range of soldering conditions consistent with good manufacturing practice for surface mount components. This includes Pb free reflow processes with peak temperatures up to  $270^\circ\text{C}$ . Recommended profiles for reflow and wave soldering are shown below for reference.

NC products are recommended for lead soldering application or gluing techniques.

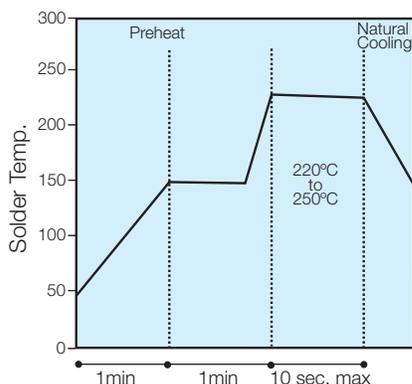

#### Wave

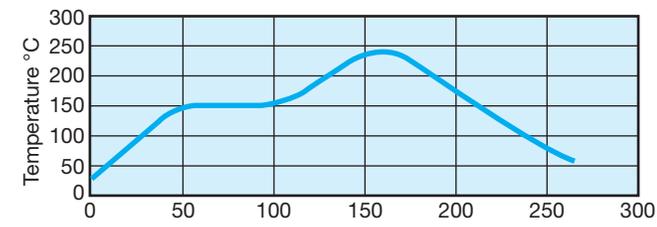

(Preheat chips before soldering)  
T/maximum  $150^\circ\text{C}$

- The visual standards used for evaluation of solder joints will need to be modified as lead free joints are not as bright as with tin-lead pastes and the fillet may not be as large.
- Resin color may darken slightly due to the increase in temperature required for the new pastes.
- Lead-free solder pastes do not allow the same self alignment as lead containing systems. Standard mounting pads are acceptable, but machine set up may need to be modified.

#### Reflow

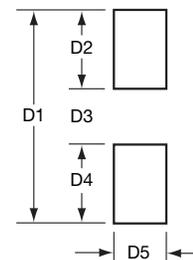

(Minimize soldering time)

- Pre-heating:  $150^\circ\text{C} \pm 15^\circ\text{C}$  / 60-90s
- Max. Peak Gradient:  $2.5^\circ\text{C/s}$
- Peak Temperature:  $245^\circ\text{C} \pm 5^\circ\text{C}$
- Time at  $>230^\circ\text{C}$ : 40s Max.

#### RECOMMENDED SOLDERING PAD LAYOUT

Dimensions in mm (inches)

#### REFLOW SOLDERING

- ND: epoxy-phenolic resin coating  
 NE: epoxy resin coating  
 (recommended for severe mounting conditions)  
 NV: epoxy varnish coating
- Leads: Radial copper wire tinned
- Marking: on package only for ND03 & NE03  
 ND/NE 06/09: Nominal resistance and tolerance for  $\pm 5\%$ ,  $\pm 10\%$   
 NV06/09: Nominal resistance and tolerance
- Delivery Mode: Bulk, reeled or ammpacked

### APPLICATIONS

- Commodity Product: 2 families  
 ND or NE: general purpose  
 NV: professional
- Alarm and temperature measurement application
- Temperature regulation application
- Level detection application
- Compensation application

## TAPING CHARACTERISTICS

### Missing components

A maximum of 3 consecutive components may be missing from the bandolier, surrounded by at least 6 filled positions. The number of missing components may not exceed 0.5% of the total per packing module.

The beginning and the end of tape exhibit 8 or 9 blank positions.

### DIMENSIONS: millimeters (inches)

Value	Tolerance	Dimensions Characteristics
18	+1 / -0.5	W Leading tape width
6	±0.3	W <sub>0</sub> Adhesive tape width
9	+0.75 / -0.5	W <sub>1</sub> Sprocket hole position
3 max.		W <sub>2</sub> Distance between the top of the tape and the adhesive
4	±0.2	D <sub>0</sub> Diameter of sprocket hole
16/19.5	±0.5	H <sub>0</sub> Distance between the tape axis and the seating plane of the component
		H <sub>1</sub> Distance between the tape axis and the top of component body

Value	Tolerance	Dimensions Characteristics	
12.7	±0.2	P <sub>0</sub> Sprocket holes pitch	
254	±1	- Distance between 21 consecutive holes 20 pitches	
0.7	±0.2	t Total thickness of tape	
2.54	5.08	+0.6 -0.1	E Lead spacing
5.08	3.85	± 0.7	P <sub>1</sub> Distance between the sprocket hole axis and the lead axis
12.7	±1.0	P Spacing of components	
0.5	0.6	±5%	d Lead diameter
0	±1.3	°P	Verticality of components
0	±2	°h	Alignment of components

High precision resistance and an outstanding ability to reproduce the sensibility index B, make these ranges of products the types of thermistors ideal for temperature measurement applications.

Leaded or unleaded, these small size and rapid response time thermistors are able to meet the most accurate requirements. Parts are complying to AEC-Q200 requirements.

## FEATURES

- Small size
- Tight tolerance
- High precision

## APPLICATIONS

- Engine Control Systems
- Airbag Sensor & Control Systems
- ABS/ESP Systems and more

Consult factory for availability of options:

- other nominal resistance values
- other tolerances
- alternative lead materials or lengths
- controlled dimensions

# ADVANCED TECHNOLOGY FILTERS

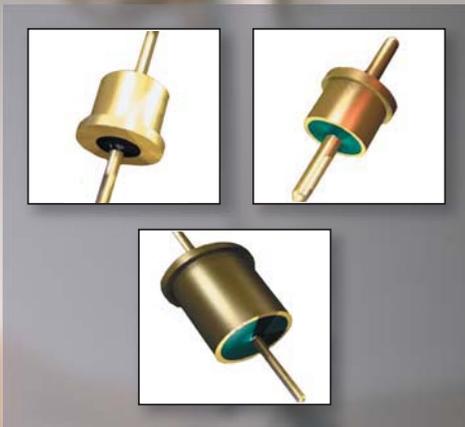

AVX advanced technology filters are custom designed for a wide range of high temperature and mission critical applications.

Innovative solutions include:

- **Hermetic High Temperature Solder-Ins**

High frequency, high reliability filters designed for space savings in harsh environment applications. Components can withstand short high temperature excursions as high as 400°C and have an operating temperature range that goes up to 200°C.

Please email AVX at [high.temp@avx.com](mailto:high.temp@avx.com) for any inquiries.

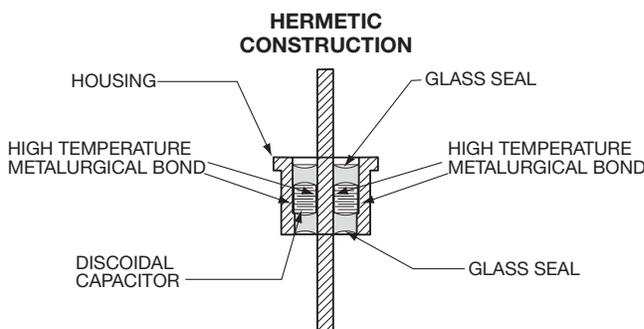

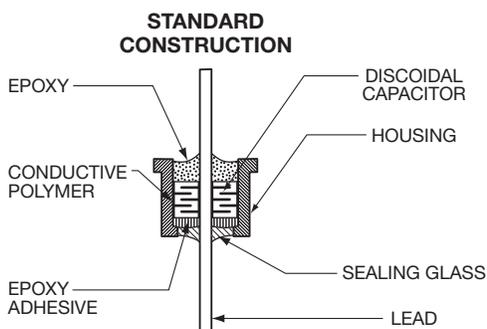

These are high frequency filters in space saving solder-in designs which will operate under harsh environments and meet the high reliability requirements of MIL-F-28861 without outgassing. AVX Filters Corporation has designed a filter which sets a new standard for the industry. These feed-thru filters are constructed with hi-rel semiconductor materials and rugged MLC discoidal capacitors. They are also manufactured at high temperatures (>500°C) without fluxes, epoxies or other polymers, thus eliminating failure mechanisms associated with conventional solder-ins. These solder-ins withstand short temperature excursions as high as 400°C, and can actually be operated at temperatures to 200°C. Available either as discrete packages in standard case sizes or as multiple filter brackets, all have hermetic glass-to-metal seals on both ends.

### FEATURES

- Standard sizes
- Epoxy free construction
- Hermetic on both ends
- MIL-PRF-31033 Discoidal Capacitor
- 400°C installation

## AVX FILTERS SOLDER-IN STYLE FILTER

### STYLE

- Discrete, hermetically sealed solder-in filters
  - AVX Filters Series\*
  - WQ: .400" Case Diameter
  - XQ: .250" Case Diameter
  - YQ: .165" Case Diameter
  - ZQ: .128" Case Diameter
- Custom design available
- Multiple filter arrays
  - Custom bracket housing employing discrete hermetic filters
  - Custom rugged bracket housings with inter-rated hermetic filtered feed-thrus

### SPECIFICATIONS

- Operating temperature range: -55°C to 200°C
- 400°C rated installation temperature
- Voltage range: 50 to 300VDC
- Capacitance Range: 10 pF to 1.2 μF
- Hermeticity:  $1 \times 10^{-7}$  ATM cm<sup>3</sup>/sec minimum
- Rated current: up to 15 amps
- Circuits: C
- Designed to meet or exceed requirements of MIL-F-28861

### CHARACTERISTICS

- Rugged monolithic ceramic capacitor construction
- Capacitor attached with solderless, fluxless, high temperature metallurgical bond
- Hermetic glass-to-metal seals on both ends
- No epoxies, resins or polymers to outgas or degrade in harsh environments

## DOWN-HOLE APPLICATION NOTES

With extreme temperatures, high pressure, and high mechanical stress, down-hole applications present some of the toughest environments for passive components. AVX understands these challenges and is committed to meeting the demands of down-hole applications through innovative passive component solutions designed to maintain optimal performance in extreme conditions.

## OVERVIEW

The global demand for oil and gas drives the development of increasingly sophisticated equipment utilized in down-hole oil exploration. Advanced down-hole electronics must provide optimal performance while subject to extreme environmental conditions below the earth's surface. Drilling depths of more than 7 miles result in internal module temperatures approaching or surpassing the 200°C mark and they continue to escalate.

In down-hole oil exploration, electronic sensors are utilized to relay information from the tool beneath the surface of the earth, to the drilling engineers on the oil rig. This information is collected by various sensors within the tool. Information logging consists of sending, receiving, recording and analyzing of essential data allowing engineers to make critical decisions on further drilling operations based on the characteristics of the material surrounding the well trajectory. In order to fulfill these demanding requirements, AVX provides a wide range of products that are capable of withstanding extreme temperatures. These components are implemented into logging modules such as sonic, gamma-ray, density, and resistivity logging tools.

## BACKGROUND

AVX offers high temperature solutions through both ceramic and tantalum capacitors, each of which provides distinct highly reliable characteristics depending on what the application requires. AVX capacitors offer variety to meet today's size, voltage, temperature, and value constraints of many applications.

### Ceramic Capacitors

AVX offers multilayer ceramic capacitors for high temperature applications. With manufacturing plants all over the world with state of the art equipment, AVX ceramic capacitors exhibit excellent reliability and performance. The construction of these capacitors is the key advantage of AVX ceramic products.

Multilayer ceramic capacitors are constructed with alternating layers of ceramic dielectric material, and layers of conductive electrode material. This is done by utilizing tape casting techniques or wet lay down techniques, depending on the type of capacitor, and then screen-printing the electrode material on top of the ceramic layer. As shown in Figure A, terminations are then added to the ends of the capacitor which connect the internal electrodes and allow for the capacitor to either be soldered to the board (SMD) or to the leads.

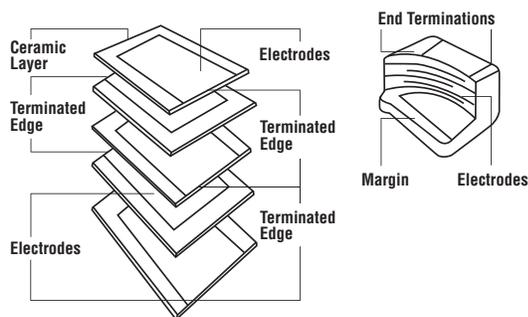

Figure A

Multilayer ceramic capacitors can be stacked to increase the electrical capabilities of the capacitor (capacitance and voltage). Since capacitance is additive when connected in parallel, the stacked construction can create high capacitance values while taking up the same footprint on the PCB.

AVX ceramic capacitors can also be encapsulated in a casing and fit with leads to further increase environmental durability. The encapsulated capacitors are then epoxy filled with a material that is CTE matched to the ceramic material.

Due to their construction and materials, there are certain requirements necessary to consider when using multilayer ceramic capacitors. While ceramic materials have exceptional compressive strength, they can be susceptible to fractures due to tensile stress. It is necessary to choose particular options provided by AVX products to address this issue. Custom leads are recommended for high vibration conditions as well as for temperatures that may exceed the recommended operating temperature. The custom leads and terminations absorb the tensile stress and prevent cracking in the ceramic capacitor. Thermal shock should also be considered to reduce the risk of differential expansion caused by the increased temperatures.

AVX provides highly reliable ceramic capacitors that take possible failure modes into consideration and provide a high quality product with exceptional performance while performing in harsh conditions.

### Tantalum Capacitors

AVX manufactures both dry tantalum and wet tantalum capacitors for high temperature applications, each having its own unique manufacturing process.

As shown in Figure B, tantalum chip capacitors incorporate a porous tantalum metal pellet which forms the anode, while its oxide layer makes up the dielectric. AVX tantalum technology uses manganese dioxide as the counter electrode (cathode) with self-healing properties for long life. This construction allows for very high capacitance in a small package.

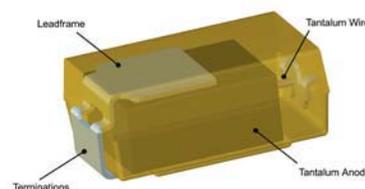

Figure B

Wet tantalum capacitors are constructed inside of a cylindrical tantalum can, containing the tantalum anode along with an electrolytic solution. A proprietary cathode is incorporated and allows for less wasted space which makes the wet tantalums an ideal candidate for high capacitance in a small size component.

The wet tantalums and tantalum chips are available with maximum operating temperatures from 175°C to 200°C. The leads on these products also absorb mechanical shock from vibration in down-hole applications.

For applications with temperatures above 200°C, AVX has developed a new construction technology (THH series) that uses a ceramic casing around the tantalum chip. THH series can operate at temperatures up to 230°C. These are hermetically sealed parts, capable of reliable operation in harsh environments.

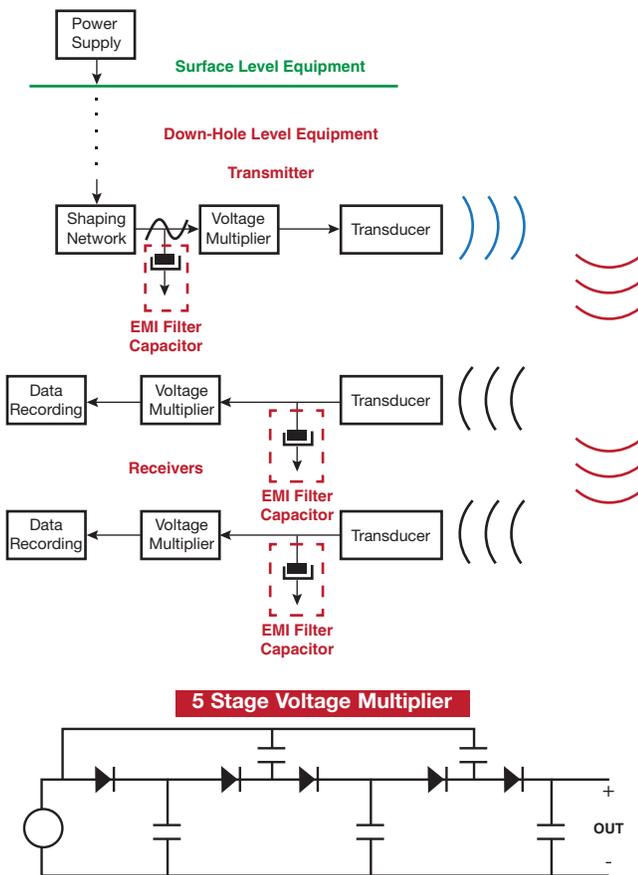

AVX provides products that exhibit optimal performance characteristics in down-hole environments. Whether ceramic or tantalum, AVX has a solution for the needs of the high temperature applications market.

## SONIC LOGGING TOOL

Sonic logging is implemented in down-hole applications to determine the porosity of the materials surrounding the well hole. Facilitating sonic logging, the acoustic module consists of various piezoelectric sensors driven by voltage regulators, amplifiers, filters, and shaping networks that send and receive the acoustic signal the engineer uses to help determine the depth and direction of the down-hole tool. Due to the extreme conditions inside the well, the electronic module's components must be able to withstand vibrations and high temperatures during normal operating life conditions.

Sonic sensors used for porosity measurements in down-hole applications typically operate at lower frequencies in order to penetrate the dense surrounding materials. Tantalum capacitors perform exceptionally well at these low operating frequencies. AVX offers high temperature wet tantalum capacitors as well as high temperature tantalum chips. These tantalum products have operating temperatures up to 230°C with capacitance values ranging from 0.1µF-680µF and rated voltages from 3.6VDC-125VDC.

### Sonic Tool Voltage Multiplier Diagram:

The sonic module consists of a transmitter and a receiver. The transmitter directs a low frequency acoustic signal around the borehole, part of which bounces back to the receiver. To filter the noise out of the signal, a high temperature tantalum capacitor is utilized, like AVX's THH. Ta capacitors exhibit high capacitance per volume due to the characteristics of the tantalum pentoxide dielectric layer. The dielectric layer is a thin film with a high dielectric constant and has a high surface area

due to the micro-porosity of the tantalum anode. Because capacitance is directly related to the dielectric constant and surface area, and inversely related to the thickness of the dielectric material, this technology provides very high volumetric efficiency.

The HV multiplier commonly utilizes SMT miniature HV MLCCs ranging in size from 0805 to 2225. AVX offers high voltage MLC chip and radial leaded options. C0G, N1500 and X7R dielectric materials are available in high voltage applications up to 5kV. Special design criteria in the HV radial series and AVX high voltage MLC chips allow for low leakage, capacitance values up to 15µF and tolerances as tight as 5%.

## GAMMA-RAY LOGGING TOOL

The Gamma-Ray Log helps measure the amount of shale in a formation by measuring the naturally occurring radiation from various isotopes of the elements potassium, thorium, and uranium. Although the gamma-ray log cannot measure porosity like the sonic log, it is an excellent indicator of shale. Noting the differences in the Gamma-Ray Log and the porosity log (sonic log), engineers are able to estimate the volume of shale within a formation.

Gamma-Ray logs consist of gamma ray sensors that convert the detected radiation to a corresponding electrical signal. High voltage regulators, amplifiers, and decoupling ceramic capacitors used in and in-between stages, are used to transmit the signal from the gamma-ray sensor up to the surface for log evaluation. The low voltage signals are sometimes converted to higher voltages to improve signal to noise ratios of systems.

Gamma-Ray sensors are subject to extremely harsh conditions. Being implemented into the tool, these sensors operate deep below the surface where temperatures can exceed 200°C. Along with drastic temperature increases, the vibration in the tool is severe. It is necessary for the components in these sensors to have high temperature capabilities as well as optimum mechanical shock and vibration characteristics.

AVX offers high temperature ceramic capacitors designed specifically for these conditions. AVX high temperature ceramic stacked capacitors have exceptional 200°C performance with capacitance values up to 340µF. When using gamma radiation, the components must also be suitable at very high frequencies. Class I (C0G/NP0) ceramic capacitors are capable of withstanding the high frequency requirements in Gamma-Ray detection sensors as well as voltages up to 500V. Stacked ceramic capacitors are offered in various sizes, custom shapes, many lead styles including soft custom leads, and can even be encapsulated. These options allow the components to endure extreme mechanical shock and vibration conditions that Gamma-Ray sensors will encounter in the well.

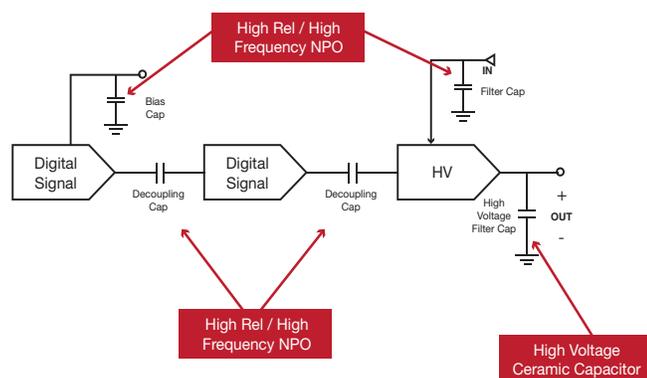

## DENSITY LOGGING TOOL

The density tool is used to measure the bulk density, and ultimately porosity, of formations around well holes using gamma-rays. The density tool consists of a gamma-ray emitter (nuclear source), driven by a high voltage supply, and two or more gamma-ray detectors (receivers).

AVX ceramic capacitors are used in density sensor applications. As seen in the circuit, density sensors incorporate multiple filtering and decoupling capacitors. These capacitors need to be capable of high voltages and

high frequencies. Due to its excellent performance in harsh environments, high reliability NPO ceramic capacitors are chosen for these applications. As previously mentioned, AVX ceramic stacked capacitors have capacitance values up to 340 $\mu$ F and can withstand voltages up to 500V with no derating necessary. The effects of non-ideal parasitics in a capacitor become critical when using the capacitor for filtering to improve voltage quality with low ESR and low ESL being the most important factors. Superior ESR and ESL characteristics, along with advantageous volumetric capabilities, are the main qualities that make stacked MLCC capacitors ideal for these applications.

## Radiation Tool High Voltage Supply Diagram:

## RESISTIVITY LOGGING TOOL

Resistivity logs are used to indirectly measure the resistance of the various formations around a borehole.

The resistivity tool works by probing the various formations with magnetic fields that induce a current in the formation. Since current will flow through low resistance material, and fail to flow through high resistance material (like hydrocarbons), the resistivity tool helps to determine possible locations of oil deep inside the earth's crust.

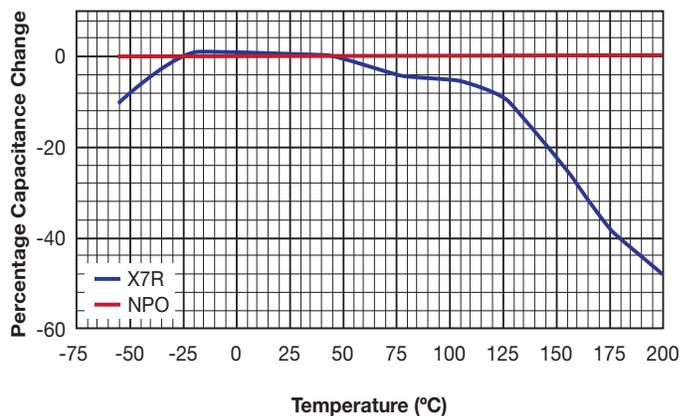

Several tools are used to measure resistivity including: the electric tool, induction tool, and focused electric tool. The three different tools conduct three different resistivity measurements on the formation surrounding the borehole:

As with all electronic devices, power must be supplied for the device to become operational. Because high temperatures can vary the output of the resistivity tool's power supply, and damage the resistivity tool's components, temperature compensation is used to control the output so that it does not become unstable. The temperature compensation network consists of a temperature-current transducer, like a thermistor, and a voltage to frequency converter used as feedback to control the output of the power supply.

The temperature compensation of network's voltage to frequency converter uses the thermistor's current to output a signal that can control the power supply's operation, while a timing capacitor is used to set the frequency of the VFC. For the voltage-to-frequency operation to be a success it is crucial that the RC network have the correct time constant, specified by the VFC device. Since the input to the capacitor can change polarity, and temperatures can vary greatly in

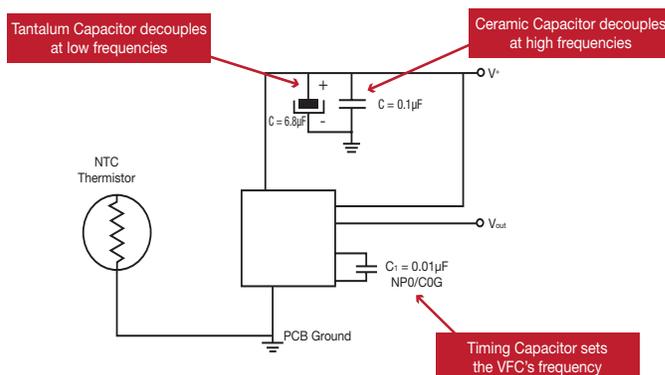

downhole environments, it is recommended that a high temperature capacitor with an NPO dielectric be implemented to reduce the effects of capacitance drift with temperature. The NPO dielectric material has the lowest capacitance change vs. temperature, making them an optimum candidate for filtering. See plot below.

## Δ Capacitance vs. Temperature

To reduce noise at low frequencies, a large enough capacitor must be used with low leakage current, along with a bypass capacitor for higher frequencies connected from V+ to ground. Tantalum capacitors offer large capacitance values in a small package, performing well at low frequencies; while ceramic capacitors offer great decoupling capability at higher frequencies.

## Temperature VFC Tool Diagram:

## SUMMARY

Downhole oil exploration and other high temperature applications require that every component exposed to high temperature meet the high standards of that industry. AVX components provide solutions to a wide variety of these applications. High reliability and ideal performance under these harsh environmental conditions is the advantage AVX offers over competitive products. Many options and customizable designs are available for AVX components in order to suit the needs of all application requirements.
