

Industry-Leading Wireless Power Solutions

The Most Widely Adopted in the Market

History of TI's Wireless Power Innovation

The TI Advantage

- Industry leader with first WPC 1.1 ICs
- Innovative, broad portfolio
 - 5 transmitter types, 7 receiver versions
- Comprehensive design support
 - Reference designs, app notes, complete solutions

Solutions on the Market

- 40+ Qi-compliant receivers
- 20+ Qi-compliant transmitters
- 80% of current Qi-enabled devices use TI technology

Visit ti.com/wirelesspower for product details and design resources.

Design with Proven Wireless Power Solutions

Transmitter Features:

Widest range of transmitter type support

- First A1, A5, A10, A11, and A6 solutions
- Single coil and coil arrays
- Next-generation portfolio reduces BOM with integrated demodulation

5V input with patented Dynamic Power Limit™

- Supports 5V, A5, and A11 WPC transmitter types (bq500211A)
- Ensures robust operation from USB port

Continued innovation

- Increased charging area coil array (bq500410A)
- Supports single and multiple coil designs
- Small transmitter form factors
- WPC 1.1-compliant (Foreign Object Detection) for 1.0 and 1.1 receivers

bq500211A eval board with 12V coil.

bq500410A eval board with 12V coil array.

Qi-Compliant Transmitter Solutions

Device	Tx Type	V _{IN} (V)	Magnet	WPC	Key Features
bq500410A	A6	12	No	1.1	1 to 3 coils, large charging area
bq500211A	A5	5	Yes	1.1	Power from low-cost 5V adapter or USB port
	A11	5	No		
bq500210	A1	19	Yes	1.0	Second-generation solution with digital demodulation to reduce component count
	A10	19	No		

Receiver Features:

Industry's first and smallest receivers

- Monolithic receiver IC with built-in Li-Ion charger
- 93% AC/DC efficiency
- WPC 1.1-compliant (Foreign Object Detection)

Patented system design

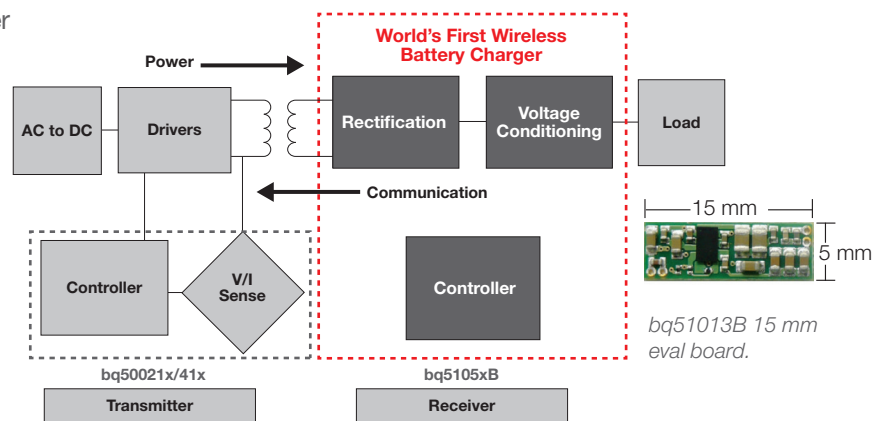

- Adaptive communications current limit for robust communications during transients
- Dynamic efficiency scaling optimizes performance over a wide range of operating power
- Dynamic rectifier control improves load transient performance

Robust and flexible architecture

- 20V maximum input tolerance with patented OVP clamp
- Automatic adaptor detection enables wired or wireless charging
- 5V, 7V, and Li-Ion battery charger options

To download data sheets or evaluate TI's wireless power technology in your lab, visit ti.com/wirelesspower or contact your local TI office.

Wireless Power Transfer System

Qi-Compliant Receiver Solutions

Device	Description
bq51013A	WPC 1.0, integrated wireless power receiver, 5V regulated output
bq51013B	WPC 1.1, integrated wireless power receiver, 5V regulated output
bq51050B	WPC 1.1, integrated wireless power receiver and 4.2V Li-Ion charger receiver
bq51051B	WPC 1.1, integrated wireless power receiver and 4.35V Li-Ion charger receiver

Important Notice: The products and services of Texas Instruments Incorporated and its subsidiaries described herein are sold subject to TI's standard terms and conditions of sale. Customers are advised to obtain the most current and complete information about TI products and services before placing orders. TI assumes no liability for applications assistance, customer's applications or product designs, software performance, or infringement of patents. The publication of information regarding any other company's products or services does not constitute TI's approval, warranty or endorsement thereof.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
