CBM-120

Mosaic Array Series

Ultraviolet Chip On Board LEDs

Table of Contents

Features:

- Mosaic Array UV LED chipset with surface emitting area of 12 mm^2, 4:3 aspect ratio
- All the benefits of chip on board processing without the need for complicated assembly process
- Vertical chip UV LED technology for high power density and uniform emission
- Wide Range of UVA Wavelengths
- High thermal conductivity copper coreboard package
- Low-profile window for efficient coupling into small-etendue systems
- Can be operated at variable drive currents up to 18A
- NIST traceable optical and electrical measurement testing
- Environmentally friendly: RoHS and Halogen compliant

Applications

- Curing:
  - › Inks
  - › Coatings
  - › Adhesives
- Inspection
- Machine Vision
- Fiber-coupled illumination
- Specialty Projection Systems for Maskless Lithography:
  - › Optically matched to TI 0.95"DMD
- Rapid Prototyping and 3D printing
- Medical and Scientific Instrumentation

Technology Overview

Luminus LEDs benefit from innovations in device technology, chip packaging and thermal management. This suite of technologies give engineers and system designers the freedom to develop solutions both high in power and efficiency.

Luminus Mosaic Array LED Technology

Luminus' Devices vertical chip LED technology enables LED chips with uniform brightness over the entire LED chip surface. The optical power and brightness produced by these densely packed arrays of devices enable solutions not possible with single chip packages that be used to replace arc and halogen lamps.

Packaging Technology

Thermal management is critical in high power LED applications. With a thermal resistance from junction to heat sink of 0.6 °C/W, Luminus CBM-120 LEDs have the lowest thermal resistance of any UV LED on the market. This will allow the LEDs to be driven at higher current densities while maintaining a low junction temperature, thereby resulting in brighter solutions and longer lifetimes.

Reliability

With designs based on years of chip and packaging development experience, Luminus LEDs are one of the most reliable light sources in the world today. Luminus LEDs pass a rigorous suite of environmental and mechanical stress tests, including mechanical shock, vibration, temperature cycling and humidity, and have been fully qualified for use in extreme high power and high current applications. With very low failure rates and median lifetimes that typically exceed 30,000 hours, Luminus UV LEDs are ready for even the most demanding applications.

Environmental Benefits

Luminus LEDs help reduce power consumption and the amount of hazardous waste entering the environment. All LED products manufactured by Luminus are RoHS and Halogen compliant and free of hazardous materials, including lead and mercury.

Understanding Mosaic Array UV LED Test Specifications

Every Luminus LED is fully tested to ensure that it meets the high quality standards expected from Luminus' products.

Testing Temperature

Luminus core board products are typically measured in such a way that the characteristics reported agree with how the devices will actually perform when incorporated into a system. This measurement is accomplished by mounting the devices on a 40°C heat sink and measuring the device while fully powered.

This method of measurement ensures that Luminus LEDs perform in the field just as they are specified.

Multiple Operating Points

The tables on the following pages provide typical optical and electrical characteristics for the standard drive conditions. Since the LEDs can be operated over a wide range of drive conditions(currents from 200 mA to 18 A, and duty cycle from <1% to 100%) there are many other potential values attainable. Driving devices beyond recommended driving conditions shortens lifetime.

Ordering Information

Products	Ordering Part Number	Description
CBM-120-UV	CBM-120-UV-C31-FF###-2#	CBM-120 Mosaic Array UV chipset consisting of 12x1mm2 UV LEDs, a thermistor, connectors, and a square copper-core PCB.
	CBM-120-UV-C14-FF###-2#	CBM-120 Mosaic Array UV chipset consisting of 12x1mm2 UV LEDs, connectors, and a slim (rectangular) copper-core PCB.

Part Number Nomenclature

CBM — 120 — CC — C## — FF###-2#

Product Family	Chip Area	Color	Package Configuration	Bin Kit [1,2,3]
CBM: Copper-core PCB, Mosiac Array	120: 12 mm^2	UV = Ultraviolet	C14: 28 mm x 26.75 mm - Slim Package C31: 28 mm x 26.75 mm - Square Package See Mechanical Drawing section	See page 5 for complete bin definition table

Note 1: A Bin Kit represents a group of individual flux or power bins that are shippable for a given ordering part number. Individual flux bins are not orderable..
Note 2: Flux Bin listed is minimum bin shipped - higher bins may be included at Luminus' discretion

CBT-120-UV Binning Structure

CBM-120-UV LEDs are specified for luminous flux and chromaticity/wavelength at a drive current of 9 A (750 mA/mm2) and placed into one of the following Power Bins and Wavelength Bins:

Power Bins

Color	Power Flux Bin (FF)	Minimum Flux (W)	Maximum Flux (W)
UV	FA	6.0	6.5
	FB	6.5	7.0
	GA	7.0	7.5
	GB	7.5	8.0
	H	8.0	9.1
	I	9.1	10.0
	J	10.0	11.0
	K	11.0	12.1
	L	12.1	13.3

*Note: Luminus maintains a +/- 6% tolerance on power measurements.

Peak Wavelength Bins

Color	Wavelength Bin (###)	Minimum Wavelength (nm)	Maximum Wavelength (nm)
UV	365	365	370
	370	370	375
	375	375	380
	380	380	385
	385	385	390
	390	390	395
	395	395	400
	400	400	405
	405	405	410

Parameter	**Symbol**	**Values**	**Unit**
Absolute Minimum Current (CW or Pulsed)[6]		0.2	A
Absolute Maximum Current (CW) [7]		365nm - 12 380nm-410nm - 18	A
Absolute Maximum Surge Current [7] (Frequency > 240 Hz, duty cycle =10%, t=1ms)		30	A
Maximum Junction Temperature[8]	T_{jmax}	120	°C
Storage Temperature Range		-40 to +100	°C
Emitting Area		12.9	mm²
Emitting Area Dimensions		4.50 × 3.32	mm × mm

Note 1: Data verified using NIST traceable calibration standard.

Note 2: All data are based on test conditions with a constant heat sink temperature T_{hs} = 40°C under pulse testing conditions. Pulse conditions: 25% duty-cycle, frequency of 720Hz , 3 second soak.

Note 3: Unless otherwise noted, values listed are typical. Devices are production tested and specified at 9 A.

Note 4: Listed drive conditions are typical for common applications. CBM120-UV devices can be driven at currents ranging from 200 mA to 120 A and at duty cycles ranging from 1% to 100%. Drive current and duty cycle should be adjusted as necessary to maintain the junction temperature desired to meet application lifetime requirements.

Note 5: Typical total flux from emitting area at listed peak wavelength. Reported performance is included to show trends for a selected power level. For specific minimum and maximum values, use bin tables. For product roadmap and future performance of devices, contact Luminus.

Note 6: Special design considerations must be observed for operation under 1 A. Please contact Luminus for further information.

Note 7: CBM-120-UV LEDs are designed for operation to an absolute maximum current as specified above. Product lifetime data is specified at recommended forward drive currents. Sustained operation at or beyond absolute maximum currents will result in a reduction of device life time compared to recommended forward drive currents. Actual device lifetimes will also depend on junction temperature. Refer to the lifetime derating curves for further information. In pulsed operation, rise time from 10-90% of forward current should be longer than 0.5 µseconds.

Note 8: Lifetime dependent on LED junction temperature. Input power and thermal system must be properly managed to ensure lifetime.

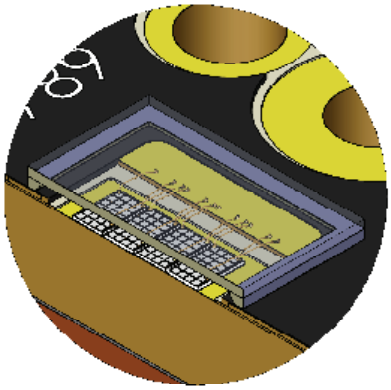
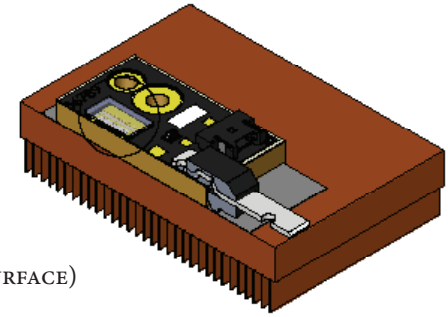
Thermal Resistance CBM-120-UV

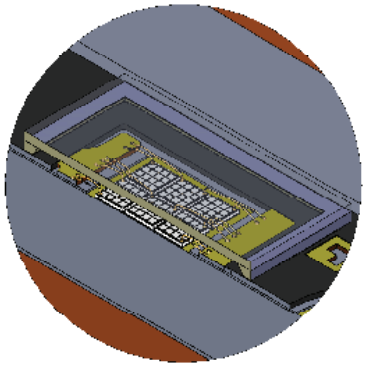


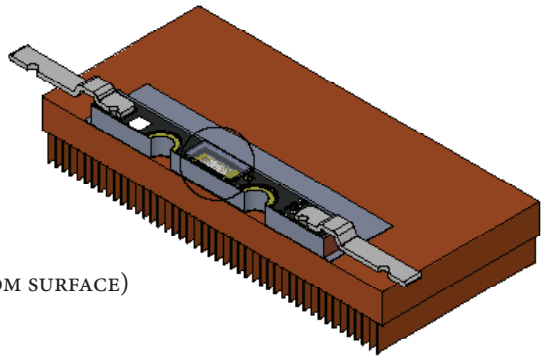


TJ = Die Junction Temp
TB = Coreboard Temp
THS = Heatsink Temp (3mm from surface)
TREF - Thermistor Temp

Typical Thermal Resistance[1] - C31

$R_{\theta j\text{-}b}$[2]	0.61 °C/W
$R_{\theta b\text{-}hs}$[3]	0.12 °C/W
$R_{\theta j\text{-}hs}$[3]	0.73 °C/W
$R_{\theta j\text{-}ref}$[2]	0.64 °C/W





TJ = Die Junction Temp
TB = Coreboard Temp
THS = Heatsink Temp (3mm from surface)

Typical Thermal Resistance[1] - C14

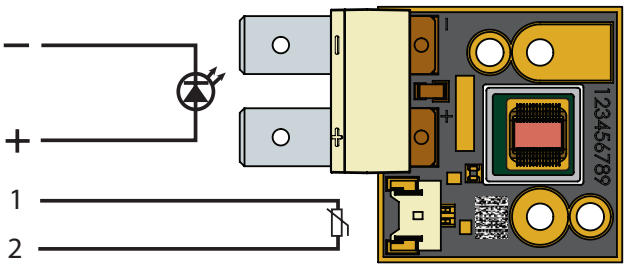
$R_{\theta j\text{-}b}$[2]	0.76 °C/W
$R_{\theta b\text{-}hs}$[3]	0.12 °C/W
$R_{\theta j\text{-}hs}$[3]	0.88 °C/W

Note 1: Real thermal resistance data - "Electrical" thermal resistance values available upon request

Note 2: Thermal resistance values are based on measured wavelength shift data.

Note 3: Thermal Resistance is based on eGraf 1205 Thermal interface.

Electrical Pinout - C31 Package



The thermistor used in CBT-120 devices mounted on coreboards is from Murata Manufacturing Co. The global part number is NCP18XH103J03RB. Please see http://www.murata.com/ for details on calculating thermistor temperature.

For more information on use of the thermistor, please contact Luminus directly.
