

LUXEON M

High Flux Density and Efficacy

Introduction

LUXEON® M emitters are illumination grade LEDs designed to enable indoor, outdoor and industrial applications which are optimized either for high efficiency or low cost. With Freedom From Binning and leading performance, LUXEON M emitters deliver high efficacy and high flux density from a uniform source with tight correlated color temperature control.

Features and Benefits

- Uniform image enabling tight beam control in MR-16 and spot lighting applications
- Specified, targeted and tested hot, at real world operating temperatures: $T_j = 85^\circ\text{C}$ to ensure *in application* performance
- High Flux Density with over 1200 “hot” lumens available from a 3x3 mm LED area enables reduced emitter counts and compact fixture designs
- Uniform intensity and color across source with 70, 80 and 90 CRI minimum
- *Freedom from Binning* delivers color consistency within a single 3 or 5-step MacAdam ellipse
- 11.2V and 5.6V packages put high performance within reach with high efficiency and low cost drivers
- Exceeds ENERGY STAR® lumen maintenance requirements.

Key Applications

- Outdoor
- High bay and low bay
- Downlights
- Lamps
- Indoor area lighting
- Spotlights

General Information

Product Nomenclature

LUXEON M emitters are specified and binned “hot” under conditions comparable to those found in “real-world” lighting products.

The part number designation is explained as follows:

L X R a - b c d e - f g h j

Where:

a — designates minimum CRI (7 = 70, 8 = 80, 9 = 90, 0 = Royal Blue)

b — is S for serially connected product with voltage less than 12V; R for series-parallel collected product with voltage less than 6V.

c — designates color designation (W = White, R = Royal Blue)

d, e — designates CCT (27 = 2700K, 30 = 3000K, 35 = 3500K, 40 = 4000K, 50 = 5000K, 57 = 5700K, 00 = Royal Blue)

fghj — minimum flux lumen (optional)

The test conditions for 12V LUXEON M LXRa-Scde-fghj are 700mA DC with junction temperature 85C. The test condition for 6V LUXEON M LXRa-Rcde-fghj are 1400mA DC with junction temperature 85C.

Therefore LUXEON M 12V products tested and binned at 700 mA follow the part numbering scheme:

L X R 7 - S W 3 0 - x x x x

L X R 7 - S W 4 0 - x x x x

L X R 7 - S W 5 0 - x x x x

L X R 7 - S W 5 7 - x x x x

L X R 7 - S W 6 5 - x x x x

L X R 8 - S W 2 7 - x x x x

L X R 8 - S W 3 0 - x x x x

L X R 8 - S W 3 5 - x x x x

L X R 8 - S W 4 0 - x x x x

L X R 8 - S W 5 0 - x x x x

L X R 9 - S W 2 7 - x x x x

L X R 9 - S W 3 0 - x x x x

L X R 0 - S R 0 0 - x x x x

LUXEON M 6V products tested and binned at 1400 mA follow the part numbering scheme:

Average Lumen Maintenance Characteristics

Lumen maintenance for solid-state lighting devices (LEDs) is typically defined in terms of the percentage of initial light output remaining after a specified period of time. Philips Lumileds projects that LUXEON M products will deliver, on average, 70% lumen maintenance (L70) at 50,000 hours of operation at a forward current of up to 700 mA for LXR_x-S_{xxxx} and 1400 mA for LXR_x-R_{xxxx}. This projection is based on constant current operation with junction temperature maintained at or below 135°C. This performance is based on Philips Lumileds historical data from tests run on similar material systems, and internal LM80 and reliability testing. Observation of design limits included in this data sheet is required in order to achieve this projected lumen maintenance.

Environmental Compliance

Philips Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON M is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS directive. Philips Lumileds will not intentionally add the following restricted materials to the LUXEON M lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Product Binning and Labeling

Purpose of Product Binning

In the manufacturing of semiconductor products, there is a variation of performance around the average values given in the technical data sheets. For this reason, Philips Lumileds bins the LED components for luminous flux, color, and forward voltage (V_f).

Decoding Product Bin Labeling

Reels with LUXEON M White emitters are labeled with a four digit alphanumeric code (CAT code) following the format below. All emitters packaged within a reel are of the same 4-variable bin combination.

For LXR x -xW xx , Reels of emitters are labeled with a four digit alphanumeric CAT code following the format below.

ABCD

A = Luminous flux bin (See table 9)

B = Color or CCT indication (2 for 5700K, 3 for 5000K, 5 for 4000K, 6 for 3500K, 7 for 3000K, and 8 for 2700K)

C = Color consistency (5 for within 5 SDCM ellipse, 3 for within 3SCDM ellipse). Detailed definitions for these color bins can be found in Table 11.

D = V_f bin (F,G,H)

Reels with LUXEON M Royal Blue emitters are labeled with a three digit alphanumeric CAT code following the format below. All emitters packaged within a reel are of the same 4-variable bin combination.

ABC

A = Radiometric Power Bin (See table 10)

B = Peak wavelength bin (See table 12)

C = V_f bin (F,G,H)

Luminous Flux Bins

Table 11 lists the standard photometric luminous flux bins for LUXEON M white emitters (LXR_x-xW_{xx}). Test conditions for LXR_x-SW_{xx} are 700 mA and junction temperature 85°C. Test conditions for LXR_x-RW_{xx} are 1400 mA and junction temperature 85°C.

Although several bins are outlined, product availability in a particular bin varies by production run and by product performance.

Company Information

Philips Lumileds is a leading provider of LEDs for everyday lighting applications. The company's records for light output, efficacy and thermal management are direct results of the ongoing commitment to advancing solid-state lighting technology and enabling lighting solutions that are more environmentally friendly, help reduce CO2 emissions and reduce the need for power plant expansion. Philips Lumileds LUXEON® LEDs are enabling never before possible applications in outdoor lighting, shop lighting, home lighting, digital imaging, display and automotive lighting.

Philips Lumileds is a fully integrated supplier, producing core LED material in all three base colors, (Red, Green, Blue) and white. Philips Lumileds has R&D centers in San Jose, California and in the Netherlands, and production capabilities in San Jose, Singapore and Penang, Malaysia. Founded in 1999, Philips Lumileds is the high flux LED technology leader and is dedicated to bridging the gap between solid-state technology and the lighting world. More information about the company's LUXEON LED products and solid-state lighting technologies can be found at www.philipslumileds.com.
