Mouser Electronics Stocking Innovative Inverted SMT Thru-Board Connectors from Tyco Electronics

Brings power from the underside to FR4 or pc boards

Mansfield, Texas, USA – September 29, 2009 – Mouser Electronics, Inc., known for its rapid introduction of the newest products, today announced it is stocking Tyco Electronics innovative new product – the inverted SMT thru-board connector. Tyco Electronics is a leader in interconnection systems.

The inverted SMT thru-board connectors provide a way to bring power from the underside of an FR4 or aluminum-clad pc board, eliminating issues of dressing wires on the top side of LED boards. The 2- through 6-position connector surface mounts on the top of the board, passing through a hole or notch in the board to present an underside interface. This innovative inverted design is low-profile and allows simpler assembly and installation of solid-state LED lighting in architectural, residential, and commercial applications. For more information about Tyco Electronics' inverted SMT thru-board connectors, visit <http://www.mouser.com/tycoelectronicsinvertedconnector>.

Keith Privett, Mouser Vice President Interconnect, Electromechanical, Power, and Test, says, “The ability to connect your power from the underside will open new doors for the design process. Conservation of surface space is always crucial and improving wire dress management issues are definite bonuses for electronic engineers.”

Known for its broad-based product line, unsurpassed customer service, and streamlined warehouse operations, Mouser continuously offers customers the most innovative products and latest technologies for their new design projects.
