

Surface Mount EMI Filters

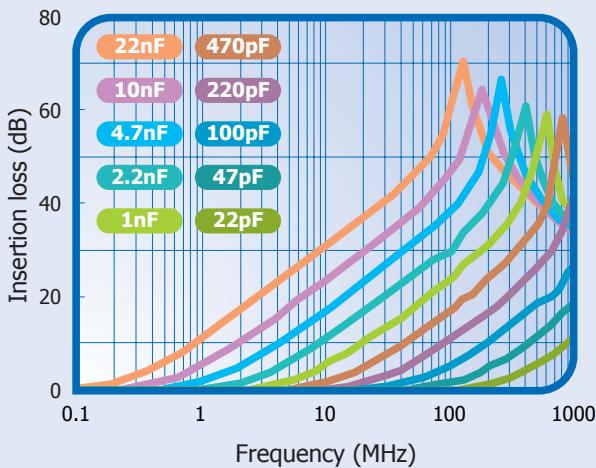

3 Terminal EMI Chips

EO1

These 3 terminal chips are ideally suited for EMI suppression in digital circuits and other signal lines, and are available in 0805, 1206 and 1806 size. While the signal or dc current passes directly through the EMI chip, unwanted noise is suppressed by the grounding of the high frequency component. COG and X7R dielectric types are available, providing capacitance values from 22pF to 200nF.

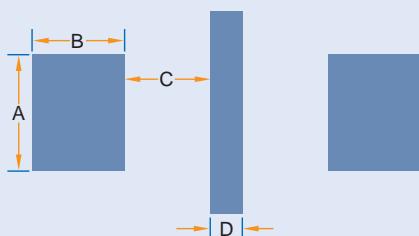

50 ohm system

Typical performance is shown in the graph above. The actual performance will be influenced by the amount of series inductance added by the interconnections.
