June 26, 2021

To: AirBorn Customers

AirBorn has completed a qualification process of new plating suppliers for the Electroless Nickel Plated (ENP) shells, used on Nano-D (N-Series) and Micro-D (M-Series) connectors, to maintain a robust supply chain. To achieve this, AirBorn has completed a rigorous qualification process for ENP shells, submitted test data to the Defense Logistics Agency (DLA) and received DLA approval. Please note that the additional NADCAP certified plating suppliers will be used for plating Nano-D (N-Series) MIL-DTL-32139 and Micro-D (M-Series) MIL-DTL-83513 shells.

These changes will also be implemented on non-Catalog and non-MIL SPEC product that AirBorn manufactures.

AirBorn will continue to follow customer specific requirements and will begin phasing in product, with these changes, 30 days from the date of this letter.

If there are any questions regarding this notification please do not hesitate to contact your AirBorn Account Manager or Customer Service Representative.
