BROADCOM

PA- 311086

Product Advisory

Issue Date: July 24, 2026

Change Description:
Additional NAND Flash part number added to BOMs

Parts Affected:

Family	Board Name	Kit	Bulk
Aero	9560-8i	05-50077-01	03-50077-01

Description and Extent of Change:
Broadcom is adding SK Hynix NAND as an alternate source for the NAND flash on the MegaRAID 9560-8i 4GB adapter. Currently these boards support Kioxia BiCS3 and BiCS5 series flash. For long-term supply assurance, it is necessary to add an additional NAND supplier.

While adding SK Hynix does not require changes to the board, updates to the NAND flash library were required in firmware. Due to this, FW has instituted downgrade blocking for boards populated with SK Hynix as of MR 7.38. This means a board built with SK Hynix cannot use FW versions earlier than MR 7.38.

To give customers time to adjust to this requirement, Broadcom will not start shipping boards using SK Hynix until after October 1, 2026. The revision number indicating the change will be:

Family	Board Name	Kit	Bulk
Aero	9560-8i	05-50077-01 Revision 016	03-50077-01 Revision 016

Reasons for Change:
Add next generation SK Hynix flash to BOM for long term supply assurance.

Effect of Change on Fit, Form, Function, Quality, or Reliability:
Downgrade will not be available for boards populated with SK Hynix NAND to firmware versions earlier than MR 7.38. No change to board design or layout.

Effective Date of Change:
October 1, 2026

After October 1, 2026, boards may ship with BiCS3, BiCS5, or SK Hynix flash under the same SKU. This change has been verified by Broadcom board and FW validation teams. No samples are available.

Please contact your Broadcom field sales engineer or Contact Center for any questions or support requirements. Please acknowledge the receipt of the notice within 30 days of delivery. Lack of acknowledgement within 30 days constitutes acceptance of the change per JEDEC J-STD-046.
