2. Description of News		
We like to inform you about a minor change of the Han-Modular® Hinged Frames Plus surface treatment. The surface finishing process will be changed from vibratory finishing to spot blasting. The spot blasting is a reliable process for the surface finish and creates more constant optical appearances of the Hinged Frames Plus surfaces.		
3. Impact on Product Specification		
The change has no influence on the characteristics, features, handling, and application of the Han-Modular® Hinged Frames Plus. It can even have a positive influence on the quality and lead time.		
Current Hinged Frame with vibratory finishing  Hinged Frame from February 2024 with spot blasting 		
4. Implementation		
The Hinged Frames Plus will get one higher revision level depending on their current one, e.g., from 03 to 04. The availability of the spot blasted Hinged Frames Plus is scheduled for February 2024. During an interims period mixed shipments are possible.
