PRODUCT/PROCESS CHANGE NOTIFICATION

TITLE	**H2PAK (LV MOSFET) - Assy Flow Optimization**
IMPACTED PRODUCTS	LV MOSFET in H2PAK: see list
MANUFACT. STEP	Assembly
INVOLVED PLANT	ST Shenzhen – China
CHANGE REASON	Quality Improvement
CHANGE DESCRIPTION	New assembly flow on H2PAK package moving from one step crop (exposed copper area in dambar cut zone) to dual step crop (leads fully plated – no exposed copper) See below details
TRACEABILITY	Dedicated Finished Good Codes
VALIDATION	According to ZVEI recommendations: x SEM-PA-17 — Change of specified-assembly process sequence (deletion and/or additional process step) x SEM-EQ-02 — Production from a new equipment/tool which uses the same basic technology (replacement equipment or extension of existing equipment pool) without change of process.
REPORTS	Qualification report is enclosed to this Notification 14004 Validation.pdf

New assembly flow qualification on H2PAK package in ST Shenzhen plant moving from one step crop to dual step crop.

Agenda

life.augmented

Change description

- Aim of this document is to describe the activity performed to qualify the new assembly flow on H2PAK package moving from one step crop (exposed copper area in dambar cut zone) to dual step crop (leads fully plated – no exposed copper).
- The H2PAK package is assembled in STMicroelectronics Shenzhen plant.
- Detailed qualification activity has been performed in order to qualify the new assembly flow for H2PAK package.
- This report shows the positive results achieved. The new flow is ensuring the improvement of leads plating quality leaving unchanged the product electrical characteristics.
- All reliability tests have been completed with positive results.

life.augmented

ZVEI Guidelines

- According to ZVEI recommendations, the notification is required.

Mark change	ID	Type of change	Assessment of impact on Supply Chain regarding following aspects - contractual agreements - technical interface of processability/manufacturability of customer - form, fit, function, quality performance, reliability		Remaining risks within Supply Chain?	Understanding of semiconductors experts	Examples to explain	A: Application level B: Boardlevel C: Component level *: Not relevant for qualification matrix
			No	Yes				
x	SEM-PA-17	Change of specified-assembly process sequence (deletion and/or additional process step)	--	P	**(--):** no influence in final product integrity or *specified sequence* **(P):** influence in final product integrity or *specified sequence*	**(--):** e.g. additional cleaning step e.g. deletion of optical inspection **(P):** e.g. change lead finishing pre trim & form to post trim & form	C	
x	SEM-EQ-02	Production from a new equipment/tool which uses the same basic technology (replacement equipment or extension of existing equipment pool) without change of process.	--	P	PCN required for dedicated equipment for sensitive component production. **(--):** If change does not influence the integrity of the final product. **(P):** If impact on product integrity is anticipated.	**(--):** e.g. extension of existing equipment pool **(P):** e.g. extension of dedicated equipment in case basic technology still need to be proven	C

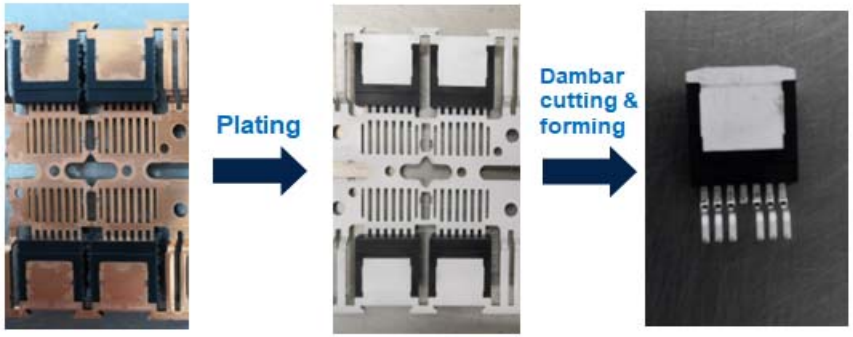
Assembly Flow Comparison

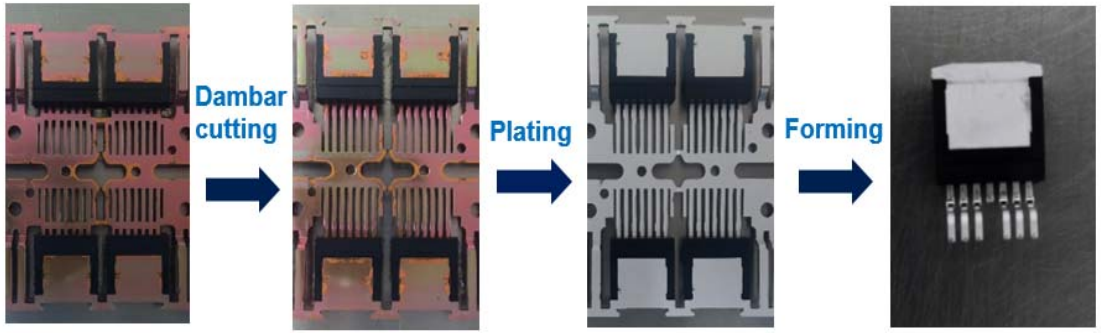
Process line description

To eliminate exposed copper area in dambar cut zone, firstly proceed dambar cutting and then plating and forming.

Actual line process



New line process



life.augmented

Conclusions

- Detailed qualification activity has been performed in order to qualify the new assembly flow on H2PAK package in STMicroelectronics Shenzhen moving from one step crop (exposed copper area in dambar cut zone) to dual step crop (leads fully plated – no exposed copper).
- All reliability tests have been completed with positive results (see attached reliability report).
- Neither functional nor parametric rejects were detected at final electrical test.
- The new flow is ensuring the improvement of leads plating quality leaving unchanged the product electrical characteristics.

TABLE OF CONTENTS

1. Reliability Evaluation Overview

1.1. Objective

Aim of this report is to present the results of the reliability evaluations performed on process change to release the new process for H2PAK 6/7L in production in H2PAK package in ST Shenzhen (China).

The process change is apply to eliminate Tin burr issue.

1.2. Reliability Strategy and Test Plan

1.2.1. Reliability strategy

Reliability trials performed as part of this reliability evaluation are in agreement with ST 0061692 and AEC-Q101 rev E specification, as below Test Plan. For details on test conditions, generic data used and specifications references, refer to test results summary in section 3.

1.2.2. Test Plan

#	Stress	Abrv	Reference	Data type	Comments
1	Pre and Post-Stress Electrical Test	TEST	User specification or supplier's standard Specification	Y	
2	External Visual	EV	JESD22B-101	Y	
3	Pre-conditioning	PC	JESD22A-113	Y	
4	Temperature Cycling	TC	JESD22A-104	Y	
5	Environmental Sequence	ES	DMS 0061692 Annex1	Y	

1.3. Conclusion

All reliability testes have been completed with positive results. Neither electrical nor parametric rejects were detected at final electrical testing.

The CSAM and TSAM result are acceptable for H2PAK.

2. Product Characteristics

2.1. Generalities

2.1.1. Test vehicle

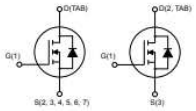
STH270N8F7-6(R2(4*OD8L8B2)

life.augmented

STH270N8F7-2, STH270N8F7-6, STP270N8F7

Datasheet

N-channel 80 V, 0.0017 Ω typ., 180 A STripFET F7 Power MOSFETs in an H²PAK-2, H²PAK-6 and TO-220 packages



H²PAK-2, H²PAK-6 TO-220

Features

Order codes	V_{DS}	$R_{DS(on)}$ max.	I_D
STH270N8F7-2	80 V	0.0021 Ω	180 A
STH270N8F7-6			
STP270N8F7		0.0025 Ω	

- Among the lowest $R_{DS(on)}$ on the market
- Excellent FoM (figure of merit)
- Low C_{rss}/C_{iss} ratio for EMI immunity
- High avalanche ruggedness

Applications

- Switching applications

Description

These N-channel Power MOSFETs utilize STripFET F7 technology with an enhanced trench gate structure that results in very low on-state resistance, while also reducing internal capacitance and gate charge for faster and more efficient switching.
