Note

B7E3R016 is not used for production.

B7E3R115 to B7E3R016

1. Updated BIOS to the latest AMI reference BIOS label 5.013_SnowyCrb_0ACLP013.
2. Disabled the serial redirection support for the PCI UARTs to avoid that the AMI terminal driver installs itself causing a boot hang at 0x92 with the debug traces enabled.
3. Added an AMD provided patch to improve the 10GbE network booting function.
4. Fixed the issue that the 1GbE was missing after a PCIe configuration change.
5. Added BIOS POST and setup screen license information.
6. Minor BIOS setup adaptions to comply with other congatec products.
7. Configured some 10GbE unused sideband MDIO signals as GPIOs.

4 Impact of the change (positive or negative) on fit, form, function & reliability

4.1 Quality and Reliability

The changes listed in section 3 improve the product quality and reliability performance.

4.2 Software Compatibility

Fully software compatible with previous revision.

4.3 Hardware Compatibility

Fully hardware compatible with the previous revision.

Note

The change described within this PCN does not affect the functionality of the modules. congatec is not obligated to perform an update on modules that have already been delivered or on modules that are pending delivery unless explicitly mentioned herein. If you have any questions about this matter, contact your local congatec GmbH representative.

5 Product/Revision Discontinuation

All previous product revisions are set to EOL status (End-Of-Life).

After the release of this PCN there will be a transition time of 12 months whereby a delivery may consist of products based on previous revisions as well as new revisions. After the completion of the transition time, only products based on the new revision will be delivered. This does not include products that fall under the RMA process.
