LilyTiny Board
## DEV-10899

Description

SparkFun LilyTiny Board is designed to add flashy functionality to a project without taking up a lot of room. The board has an ATtiny microcontroller and is as small as some of the LilyPad sensors. This LilyTiny board can quickly add twinkling lights to a project without any programming or a bulky mainboard. The DEV-10899 LilyTiny board is also a great educational tool for showing a range of functionality without having to get out of the computers. To re-program the LilyTiny, the ICSP programming connectors are broken out on the back for re-programming it.
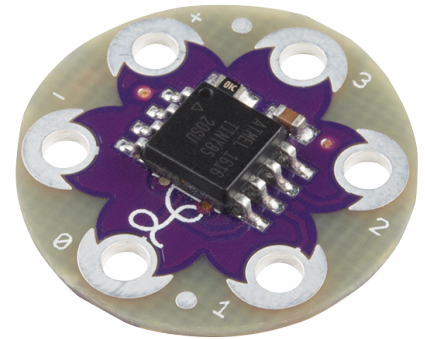

Features

- 20mm outer diameter
- Thin 0.8mm PCB
