■For lead-free soldering Recommended temperature profile

•Reflow profile

- (1) Minimize soldering time
- (2) Ensure that the temperature difference does not exceed 150 °C.
- (3) MLCC can withstand the above reflow conditions up to 3 times.
- (4) Cool naturally after soldering.

•Flow profile

Flow is not applicable for chips with size CT03 and CT05.

4.Packing method

(1)Details of leader and trailer

- ①The tape will have a empty pocket at the leader and trailer of carrier tape.
- ②The tape end will not be stuck by glue in order to make it easier to peel off from reel.
- ③The feeding round hole will be on the right side against the leading direction.

(2)Heat pressure tape

- ①Peeling strength to be 0.1~0.7N when peeling off the top tape by following method.
- ②When peeling top tape off, the glue will be stuck to the top tape side.
- ③Chip capacitor will not stuck on heat pressure tape and will be free in the cavity.

The peel-off angle:165~180 degree against the surface of carrier tape.
The peel-off speed:300mm/min.

(3)Carrier tape

- ①Chip will not fall off from carrier tape or carrier tape will not be damaged by bending than within a radius of 25mm.
- ②The chip are inserted continuously without any empty pocket.
- ③Chip will not be mis-mounted because of too big clearance between components and cavity. Also the waste of carrier tape will not fill a nozzle hole of mounting machine.

5.Indication and packing

- ①There will be following indication on one side of the reel: "PART NUMBER","LOT NUMBER", "QUANTITY","DATE OF MANUFACTURE","CUSTOMER'S NAME"
- ②There will be following indication on the reel box: "PART NUMBER","LOT NUMBER", "QUANTITY OF REEL","DATE OF MANUFACTURE","CUSTOMER'S NAME"
- ③We adequately pack the box to prevent chip capacitor from any mechanical damage during transportation.

Precautions

■ Handling

- 1) Cracks may occur unless otherwise avoiding excessive stress to the capacitors by the load of an adsorption nozzle, and bending of a substrate at the time of mounting.
 - 2) Please arrange the capacitor position where they don't have too much stress of board bending after mounting.
 - 3) Please design that the form and size of the land pattern has suitable solder amount.
- Otherwise cracks may occur. The recommended fillet height shall be 1/2 to 1/3 of the thickness of capacitors.

■ Circuit Design

- 1) When AC voltage is superimposed on DC voltage, the zero-to-peak voltage shall not exceed the rated voltage. When the capacitor is to be employed in a circuit in which there is continuous application of a high frequency Voltage or a steep pulse voltage, even though it is within the rated voltage, please inquire to the manufacturer.
 - 2) Please use the capacitor below the maximum temperature.
- When using the capacitor in a self-heating AC circuit, please make sure the surface of the capacitor remains under the maximum temperature for usage. Also, please make certain temperature rises remain below 20 °C.

■ Resin coating

Please use the resin of low curing shrinkage type. (Otherwise cracks may occur).

■ Storage

- 1) When the components is stored in minimal packaging (a heat-sealed or chuck-type plastic bag), the bag should be kept closed. Once the bag has been opened, reseal it or store it in a desiccator.
- 2) Keep storage place temperature +5 to +40 °C, humidity 20 to 70% RH.
- 3) The storage atmosphere must be free of gas containing sulfur and chlorine. Also, avoid exposing the product to saline moisture. If the product is exposed to such atmospheres, the terminals will oxidize and solderability will be effected.
- 4) Precautions 1) to 3) apply to chip capacitors packaged in carrier tapes and bulk cases.
- 5) The solderability is assured for 6 months from our shipping date if the above storage precautions are followed.

■ Application Restriction

Please consult with us before using a capacitor in the equipment which requires a high degree reliability (medical equipment, aerospace applications, nuclear equipment.) Malfunctions in medical, space, nuclear power or other vital equipment may result in death or great social losses. Capacitors designed specially with high reliability are used for the equipment above.

■ Export regulation

When the applying products relate the strategic materials which are provided in Foreign Exchange and Foreign Trade Act and Foreign Trade Management Law, the export license based on these laws are required.

■ Disposal

Please dispose the capacitors according to the relating laws about the waste treatment and cleaning. Safety application guideline and detailed information of electrical properties are also provided in Kyocera home page:
