October 2024

## Disclaimers

Lattice makes no warranty, representation, or guarantee regarding the accuracy of information contained in this document or the suitability of its products for any particular purpose. All information herein is provided AS IS, with all faults, and all associated risk is the responsibility entirely of the Buyer. The information provided herein is for informational purposes only and may contain technical inaccuracies or omissions, and may be otherwise rendered inaccurate for many reasons, and Lattice assumes no obligation to update or otherwise correct or revise this information. Products sold by Lattice have been subject to limited testing and it is the Buyer's responsibility to independently determine the suitability of any products and to test and verify the same. LATTICE PRODUCTS AND SERVICES ARE NOT DESIGNED, MANUFACTURED, OR TESTED FOR USE IN LIFE OR SAFETY CRITICAL SYSTEMS, HAZARDOUS ENVIRONMENTS, OR ANY OTHER ENVIRONMENTS REQUIRING FAIL-SAFE PERFORMANCE, INCLUDING ANY APPLICATION IN WHICH THE FAILURE OF THE PRODUCT OR SERVICE COULD LEAD TO DEATH, PERSONAL INJURY, SEVERE PROPERTY DAMAGE OR ENVIRONMENTAL HARM (COLLECTIVELY, "HIGH-RISK USES"). FURTHER, BUYER MUST TAKE PRUDENT STEPS TO PROTECT AGAINST PRODUCT AND SERVICE FAILURES, INCLUDING PROVIDING APPROPRIATE REDUNDANCIES, FAIL-SAFE FEATURES, AND/OR SHUT-DOWN MECHANISMS. LATTICE EXPRESSLY DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY OF FITNESS OF THE PRODUCTS OR SERVICES FOR HIGH-RISK USES. The information provided in this document is proprietary to Lattice Semiconductor, and Lattice reserves the right to make any changes to the information in this document or to any products at any time without notice.

## Inclusive Language

This document was created consistent with Lattice Semiconductor's inclusive language policy. In some cases, the language in underlying tools and other items may not yet have been updated. Please refer to Lattice's inclusive language [FAQ 6878](#) for a cross reference of terms. Note in some cases such as register names and state names it has been necessary to continue to utilize older terminology for compatibility.

ML	Machine Learning
MSPI	Master SPI
PMOD	Peripheral Module
SMA	SubMiniature version A
SPI	Serial Peripheral Interface
SSPI	Slave SPI
VIP	Video Interface Platform
VTT	Tracking Termination Voltage

## 1. Introduction

This user guide document describes the Lattice Semiconductor CertusPro™-NX Sensor to Ethernet Bridge Board. The board's key components are the CertusPro-NX-100 FPGA and CrossLink-NX-17, which receive sensor data and output to the host system over Ethernet. The Sensor Bridge Reference Design, CertusPro-NX Sensor to Ethernet Bridge Board and NVIDIA IGX Orin/AGX Platform allows developers to rapidly design connectivity bridging applications from sensor to compute.

The CertusPro-NX Sensor to Ethernet Bridge Board Kit includes the following:

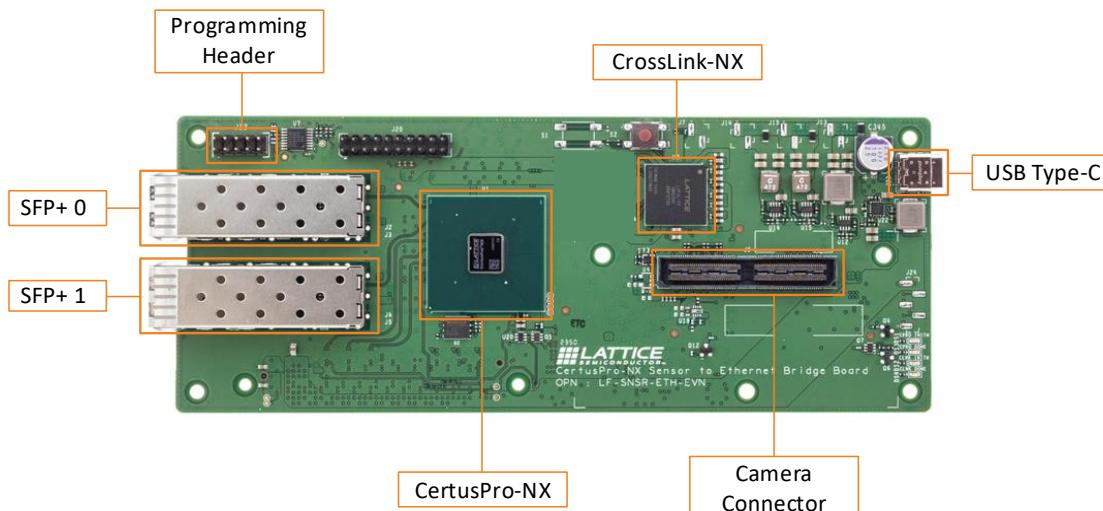

- CertusPro-NX Sensor to Ethernet Bridge Board
  - Certus-Pro-NX-100 FPGA (LFCPNX-100-9LFG672C)
  - CrossLink-NX-17 FPGA (LIFCL-17-9BG256C)
- USB Type-C to USB Type-C Cable

The contents of this user guide include top-level functional descriptions of the various portions of the CertusPro-NX Sensor to Ethernet Bridge Board, including descriptions of the on-board headers, connectors, status indicators and push buttons. The appendix sections include the BOM of this board.

The CertusPro-NX Sensor to Ethernet Bridge Board includes the following resources to implement various solutions:

- SERDES Channels – CertusPro-NX SERDES Channels are configured to two Ethernet SFP+ Ports and JESD204B Port
- FMC Connector – The board implements a subset of the High Pin Count (HPC) FMC implementation through the CertusPro-NX FPGA device
- SLVS-EC - Compatible pins available for other sensors
- JESD-204B – Four differential JESD-204B lanes are supported between CertusPro-NX and FMC Connector (J1)

[Figure 1.1](#) and [Figure 1.2](#) show the top and bottom views of the CertusPro-NX Sensor to Ethernet Bridge Board and its key components.

**Figure 1.1. Top View of CertusPro-NX Sensor to Ethernet Bridge Board**

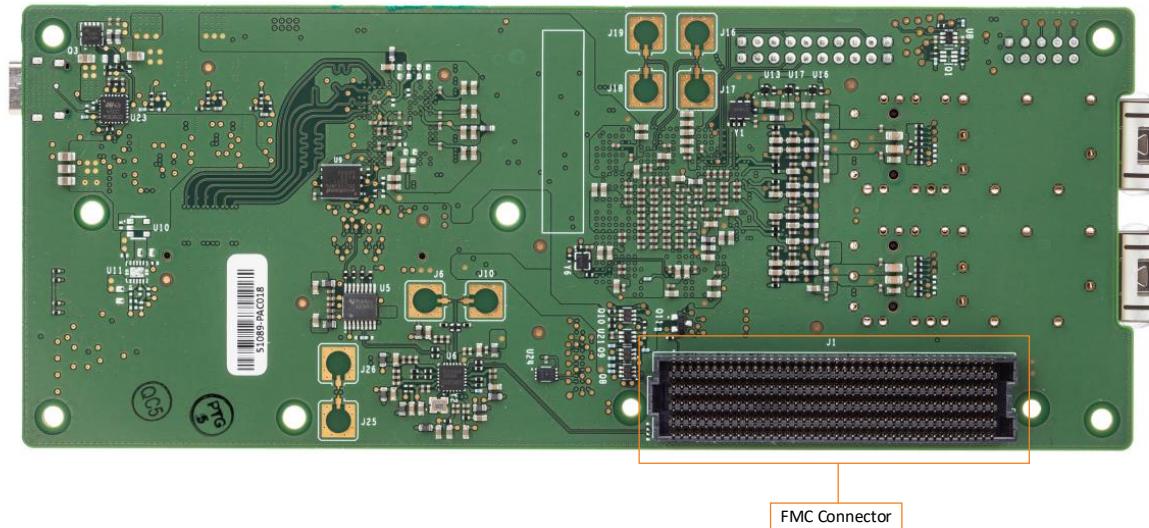

Figure 1.2. Bottom View of CertusPro-NX Sensor to Ethernet Bridge Board

### 1.1. Further Information

The following references provide detailed information on the CertusPro-NX Sensor to Ethernet Bridge Board, CertusPro-NX-100 FPGA and CrossLink-NX-17 FPGA:

- [Appendix A CertusPro-NX Sensor to Ethernet Bridge Board Bill of Materials](#)
- [CertusPro-NX Family Data Sheet \(FPGA-DS-02086\)](#) for details on the CertusPro-NX-100 FPGA.
- [CrossLink-NX Family Data Sheet \(FPGA-DS-02049\)](#) for details on the CrossLink-NX-17 FPGA.
- [Development Kits and Boards for CertusPro-NX](#)
- [Development Kits and Boards for CrossLink-NX](#)
- [Holoscan Sensor Bridge Quick Start Guide \(FPGA-AN-02096\)](#)

## 2. Headers and Jumpers

This section describes the CertusPro-NX Sensor to Ethernet Bridge Board's headers and jumpers. [Table 2.1](#) lists the headers and jumpers as shown in [Figure 1.1](#) and [Figure 1.2](#). See the [CertusPro-NX I/O Ball Mapping to Connectors](#) section for detailed connections of the headers and jumpers.

**Table 2.1. Headers and Jumpers**

Header Designator	Description	Notes
J1	FMC (FPGA Mezzanine Card) Connector	—
J2/J3	SFP+ (Small Form-Factor Pluggable) Port	—
J4/J5	SFP+ (Small Form-Factor Pluggable) Port	—
J6, J10, J16, J17 J18, J19, J25, J26	50 Ω Surface Mount Plug Connector	May or may not be populated
J7	2-Pin Header for FPGA_JTAG_EN Control	Not Populated
J9	Camera Connector	—
J13	2-Pin Header for Power Measurement of VDD_3V3 Rail	Not Populated
J14	2-Pin Header for Power Measurement of VDD_1V0 Rail	Not Populated
J15	2-Pin Header for Power Measurement of VDD_1V8 Rail	Not Populated
J20	CertusPro-NX Test Point Header	—
J22	FPGA JTAG & I <sup>2</sup> C Header	—
J23	USB Type-C Connector	—
J24	5-Pin Header I <sup>2</sup> C to USB Controller (U23) & Regulator (U22)	Not Populated

## 3. Board Programming

### 3.1. Programming Circuit

CertusPro-NX-100 and CrossLink-NX-17 can be programmed through J22 header with the [Lattice Programming Cable](#) (OPN: HW-USBN-2B) and Lattice Radiant Programmer Software. You can program the FPGA's SRAM volatile memory or external flash (Winbond W25Q128JWPIQ 128 Mb) connected to each FPGA. The CertusPro-NX-100 and CrossLink-NX-17 FPGAs are connected in a JTAG chain, therefore, both devices can be programmed through the same set of JTAG pins on the J22 header.

[Figure 3.1](#) shows the programming blocks of CertusPro-NX and CrossLink-NX-17 on the CertusPro-NX Sensor to Ethernet Bridge Board.

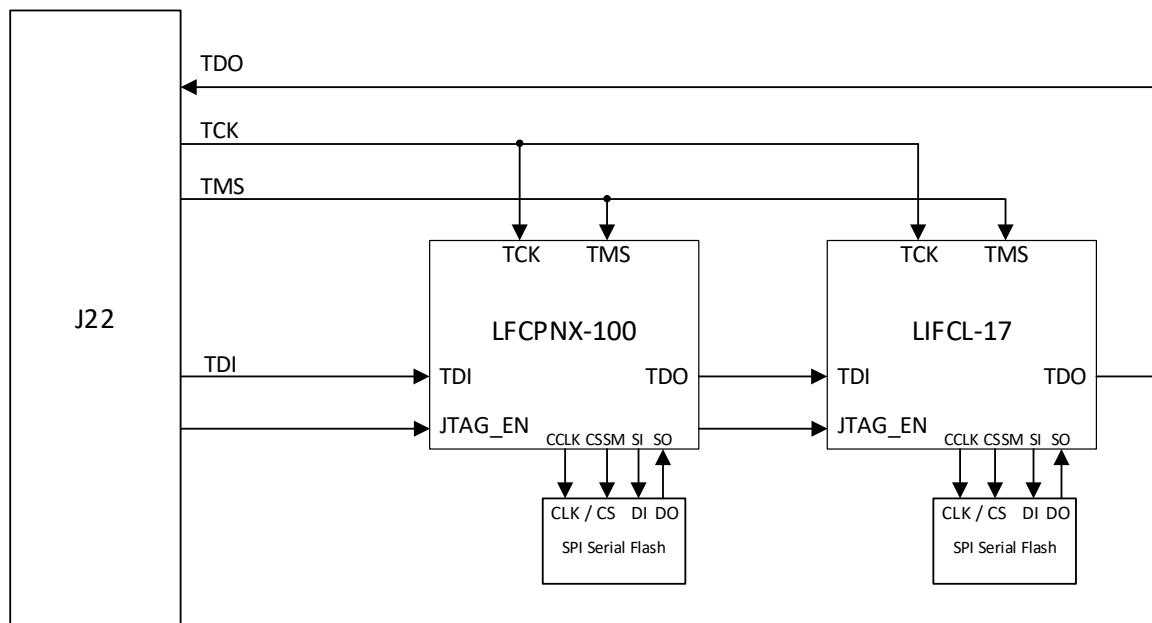

Figure 3.1. Programming Block

### 3.2. Hardware Setup for Programming

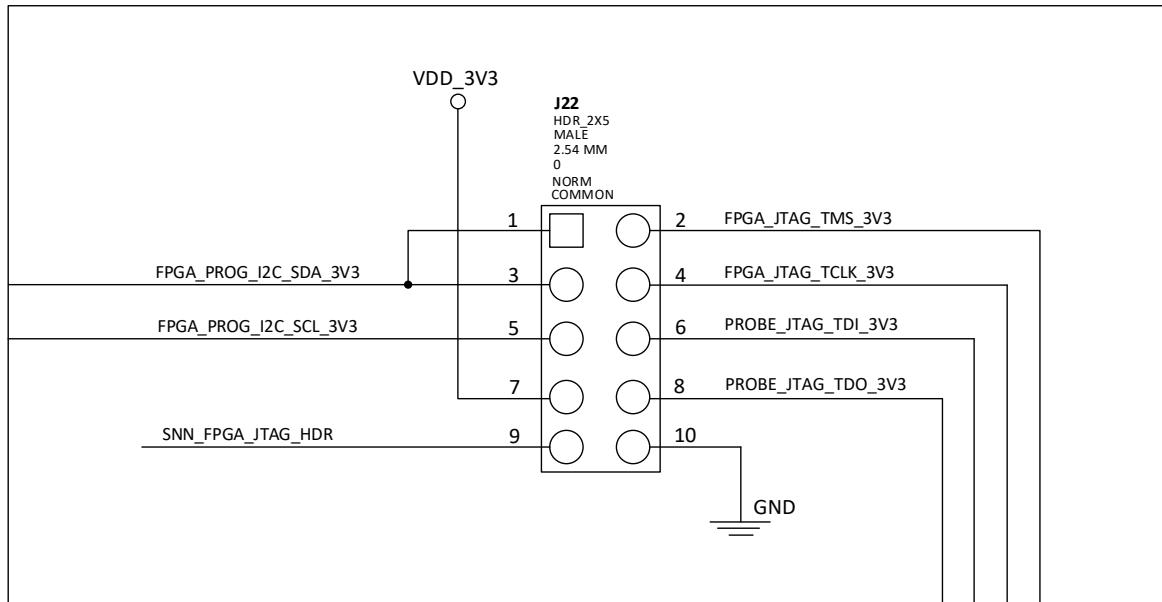

The board is programmed using the Lattice Radiant Programmer Software, which can be started as a stand-alone tool or from a Lattice Radiant project.

To program the board:

1. Connect the Lattice Programming Cable to the board's J22 Header per table ([Table 3.1](#)).

Table 3.1. Lattice Programming Cable Connections

LF-SNSR-ETH-EVN	J22 NET NAME	Lattice Programming Cable	Cable Color
J22.2	FPGA_JTAG_TMS_3V3	TMS	Purple
J22.4	FPGA_JTAG_TCLK_3V3	TCK/SCLK	White
J22.6	PROBE_JTAG_TDI_3V3	TDI/SI	Orange
J22.7	VDD_3V3	VCC	Red
J22.8	PROBE_JTAG_TDO_3V3	TDO/SO	Brown
J22.10	GND	GND	Black

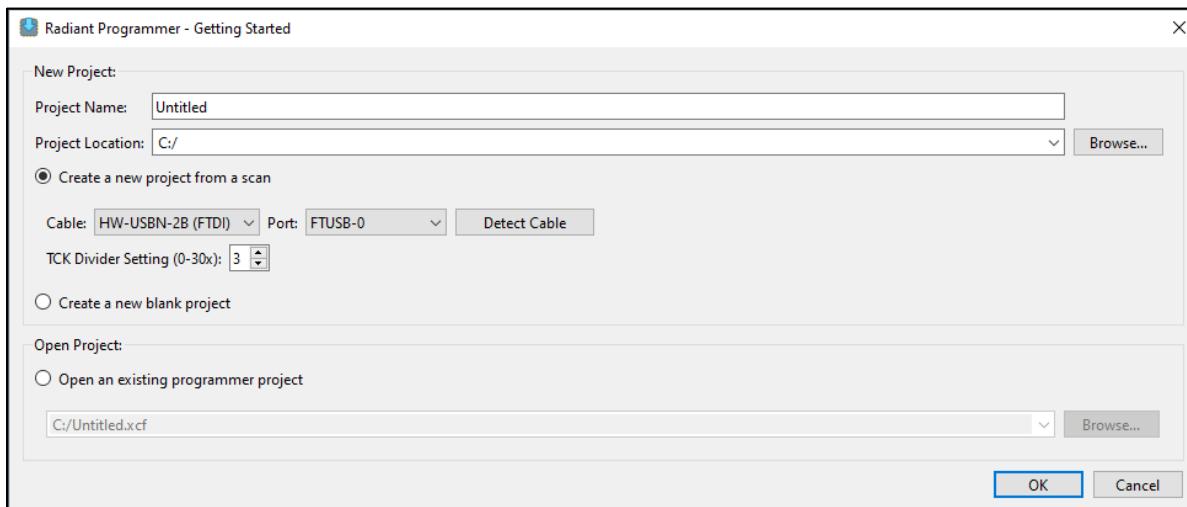

**Figure 3.2. CertusPro-NX Sensor to Ethernet Bridge Board J22 Pinout**

2. Power ON the board by connecting a USB Type-C power source to J23 connector.

### 3.3. Programming the FPGA SRAM

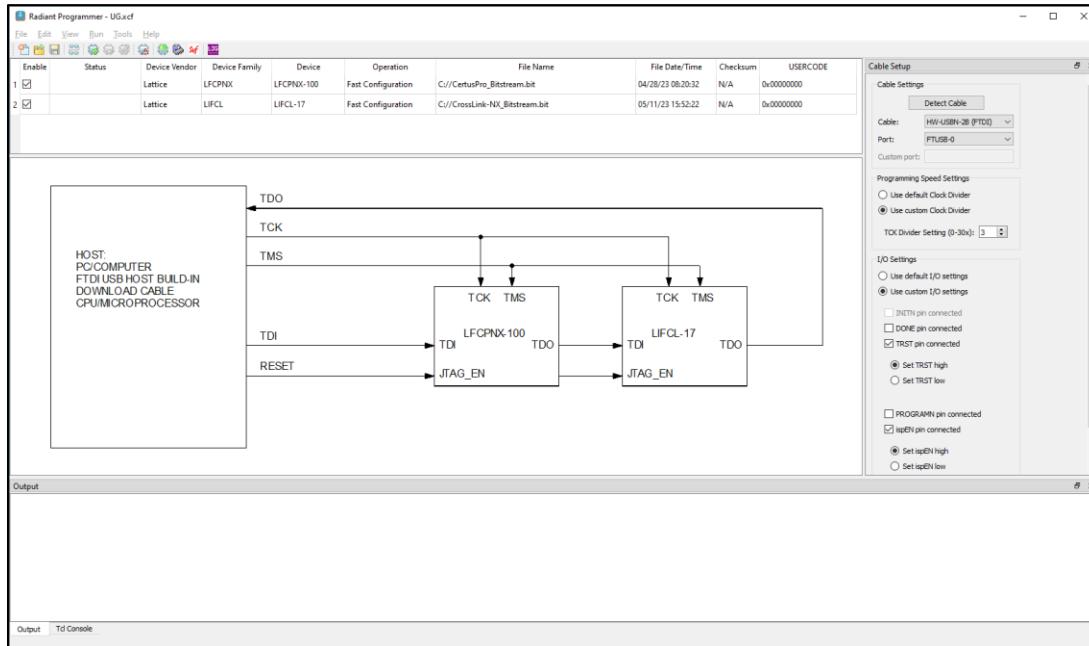

This section describes the procedure for programming bitstream patterns to the SRAM (volatile) configuration memory of CertusPro-NX-100 and CrossLink-NX-17. The bitstreams are programmed through the JTAG interface. For details on FPGA configuration, refer to the [sysCONFIG Usage Guide for Nexus Platform \(FPGA-TN-02099\)](#).

1. Start a programming project by launching the tool and initiating a board scan, as shown in [Figure 3.3](#).

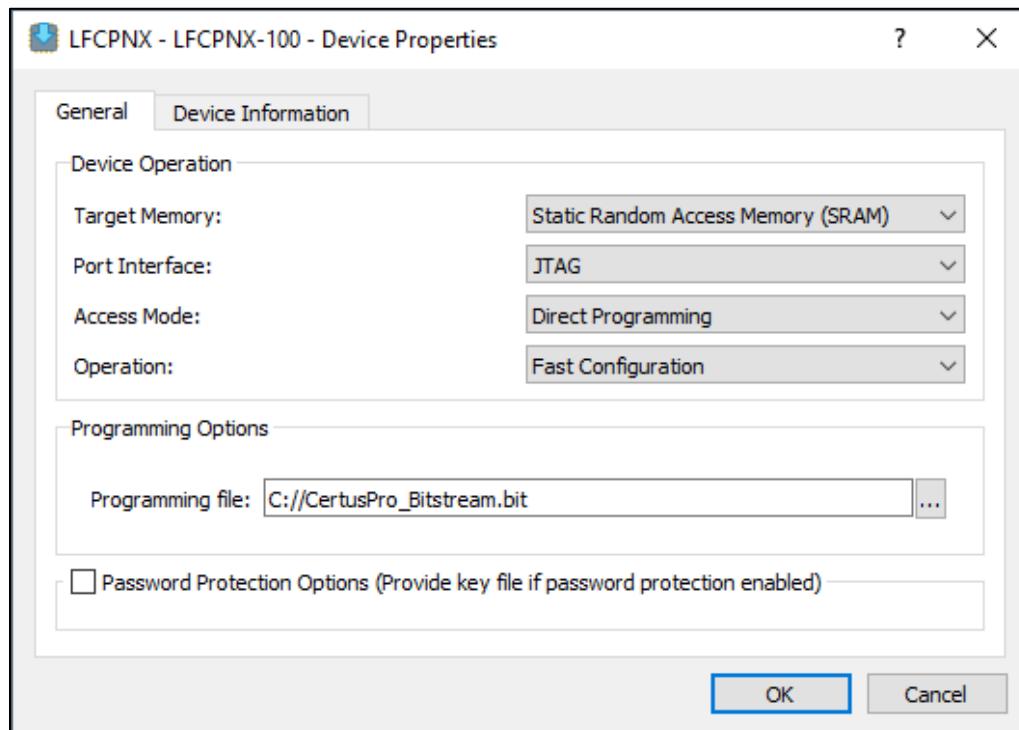

**Figure 3.3. Starting Programmer**

- When the board is successfully scanned, the window shown in [Figure 3.4](#) opens. This interface allows you to enter the file name.

**Figure 3.4. Lattice Radiant Programmer SRAM Fast Configuration**

- Double-click on the **Operation** field and select the appropriate programming mode. In this example, **Fast Configuration of Static Random Access Memory (SRAM)** is selected ([Figure 3.5](#) and [Figure 3.6](#)).

**Figure 3.5. SRAM Device Properties Window – CertusPro-NX**

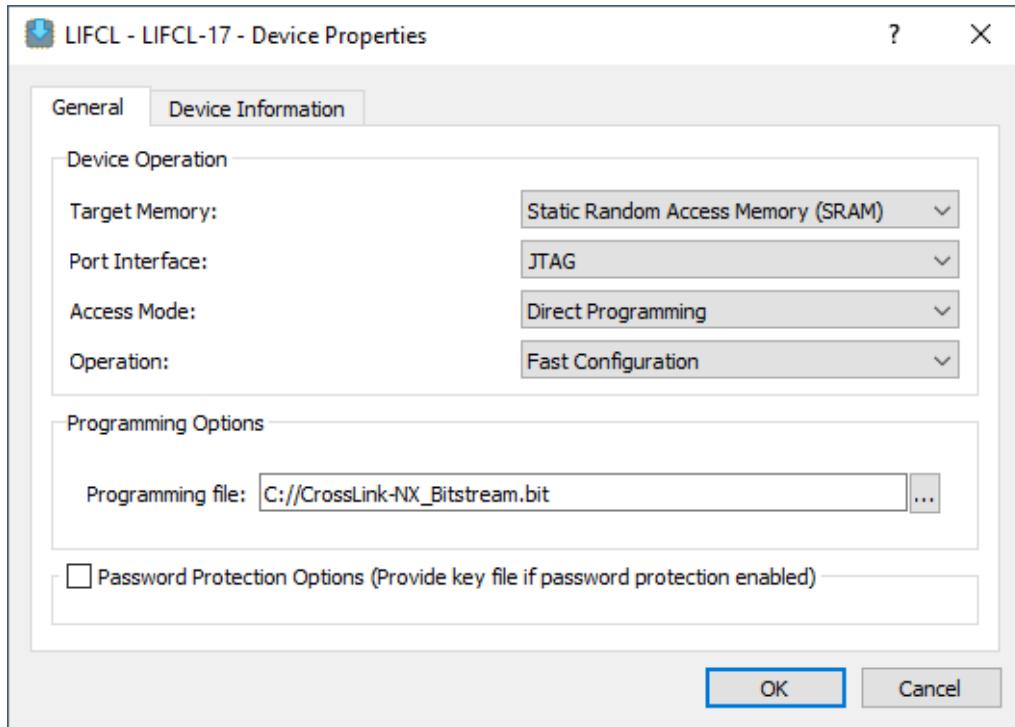

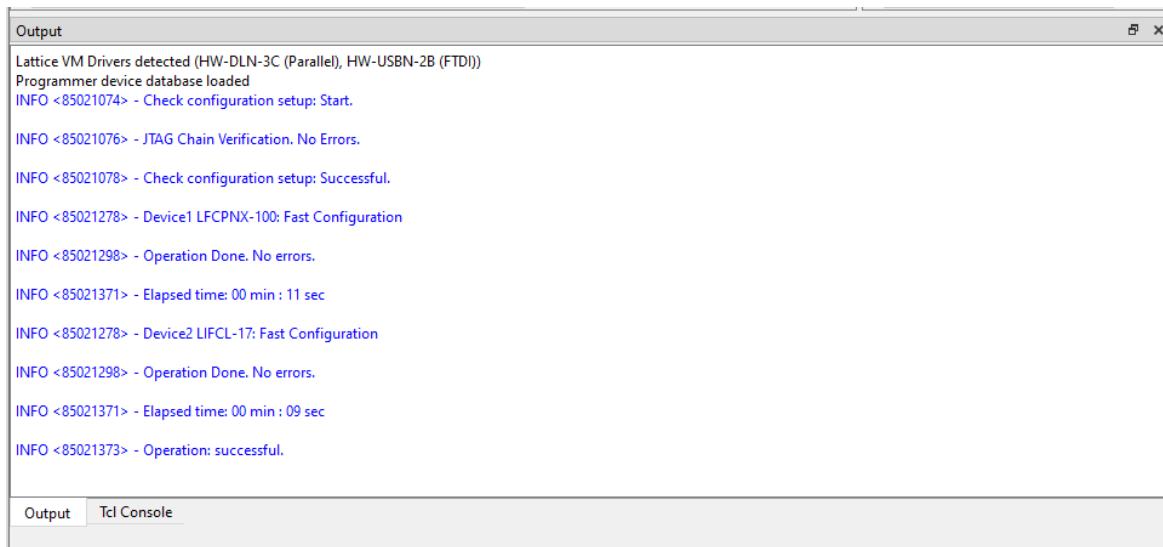

Figure 3.6. SRAM Device Properties Window – CrossLink-NX

4. Back in the main Window, click the **Program** button to configure the two FPGAs on the CertusPro-NX Sensor to Ethernet Bridge Board.
5. Check the **Output** console at the bottom of Lattice Radiant Programmer for the result of the programming. You should see **Operation: Successful** as shown in Figure 3.7.

```
Output
Lattice VM Drivers detected (HW-DLN-3C (Parallel), HW-USBN-2B (FTDI))
Programmer device database loaded
INFO <85021074> - Check configuration setup: Start.

INFO <85021076> - JTAG Chain Verification. No Errors.

INFO <85021078> - Check configuration setup: Successful.

INFO <85021278> - Device1 LFCPNX-100: Fast Configuration

INFO <85021298> - Operation Done. No errors.

INFO <85021371> - Elapsed time: 00 min : 11 sec

INFO <85021278> - Device2 LIFCL-17: Fast Configuration

INFO <85021298> - Operation Done. No errors.

INFO <85021371> - Elapsed time: 00 min : 09 sec

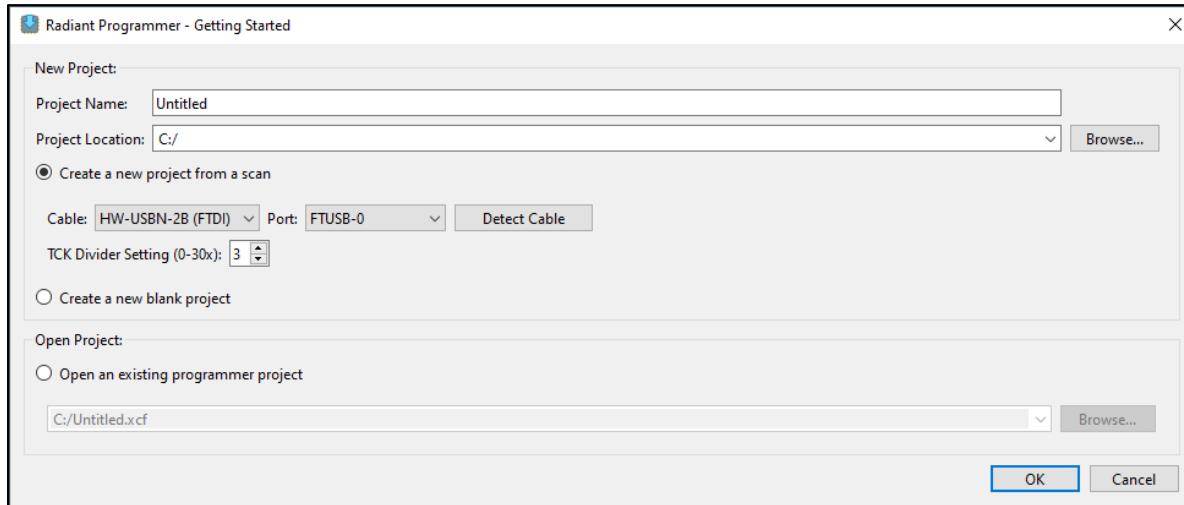

INFO <85021373> - Operation: successful.

Output  Tcl Console
```

Figure 3.7. Lattice Radiant Programmer Output Window

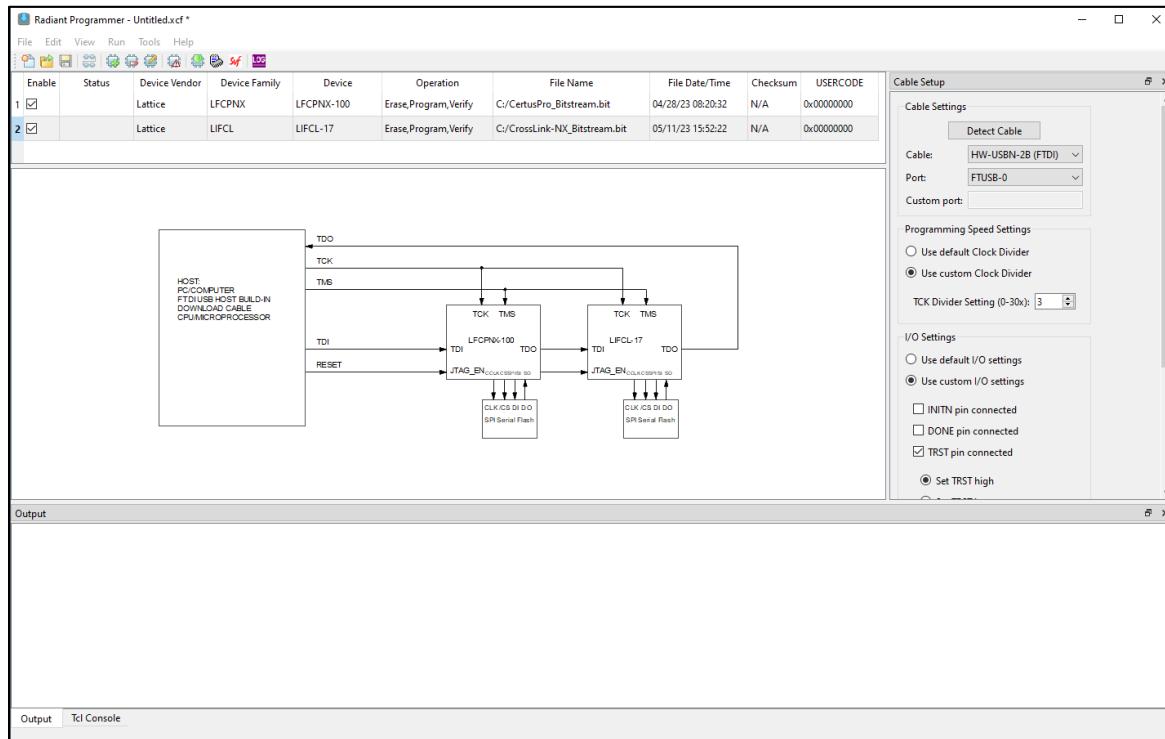

### 3.4. Programming the FPGA external FLASH

- Start a programming project by launching the tool and initiating a board scan, as shown in [Figure 3.8](#).

**Figure 3.8. Starting Programmer**

- When the board is successfully scanned, the window shown in [Figure 3.9](#) opens. This interface allows you to enter the file name.

**Figure 3.9. Lattice Radiant Programmer – External Flash Configuration**

3. Double-click on the **Operation** field and select the appropriate programming mode. In this example, **Erase, Program, Verify of External SPI Flash Memory (SPI Flash)** is selected (Figure 3.10 and Figure 3.11).

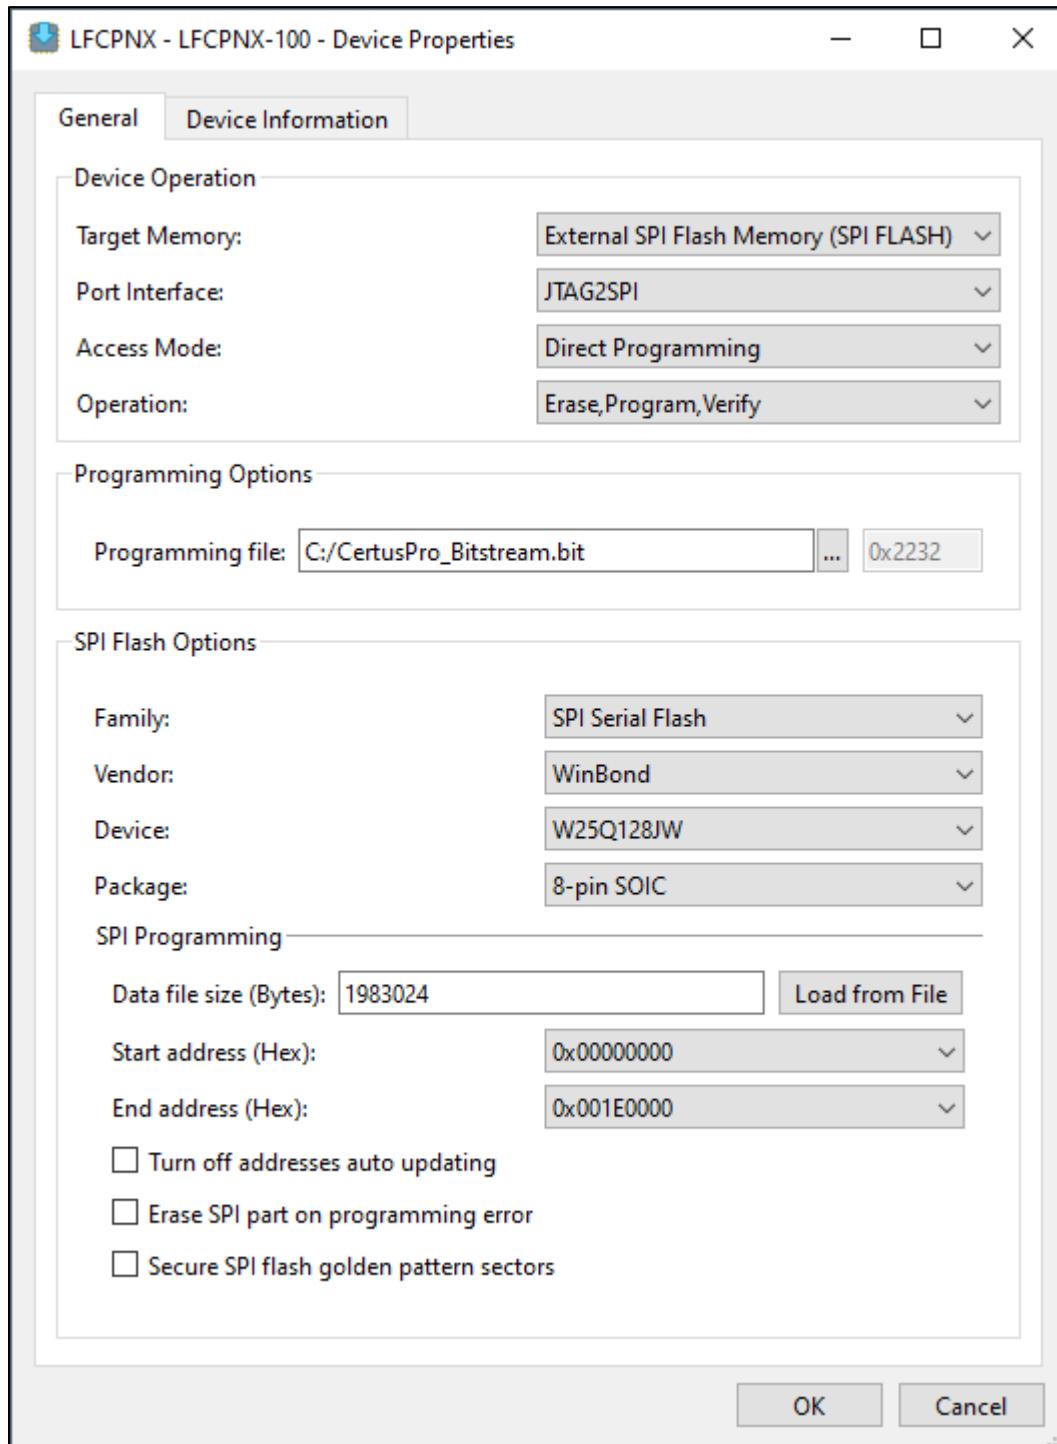

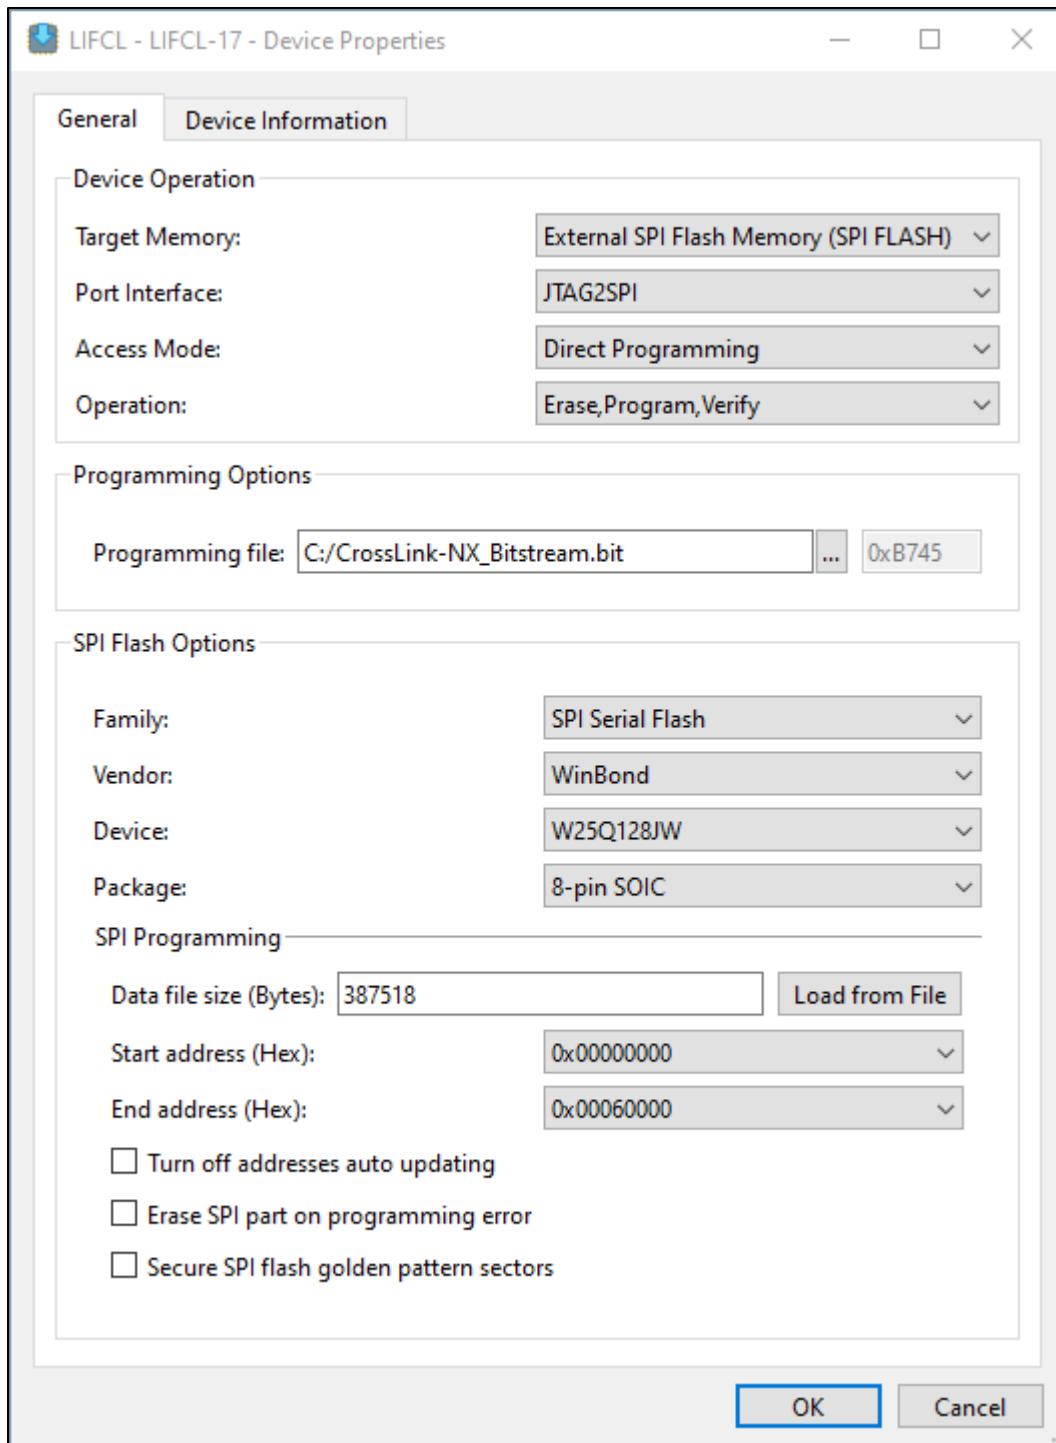

Figure 3.10. External SPI Flash Memory (SPI Flash) Device Properties Window – CertusPro-NX

**Figure 3.11. External SPI Flash Memory (SPI Flash) Device Properties Window – CertusPro-NX**

4. Back in the main Window, click the **Program** button to configure the two flashes on the CertusPro-NX Sensor to Ethernet Bridge Board.
5. Check the **Output** console at the bottom of Lattice Radiant Programmer for the result of the programming. You should see **Operation: Successful** as shown in [Figure 3.12](#).

The screenshot shows the 'Output' tab of the Lattice Radian Programmer software. The window title is 'Output'. The log messages are as follows:

```
Lattice VM Drivers detected (HW-DLN-3C (Parallel), HW-USBN-2B (FTDI))
Programmer device database loaded
INFO <85021074> - Check configuration setup: Start.

INFO <85021076> - JTAG Chain Verification. No Errors.

INFO <85021078> - Check configuration setup: Successful.

INFO <85021278> - Device1 LFCPNX-100: Fast Configuration

INFO <85021298> - Operation Done. No errors.

INFO <85021371> - Elapsed time: 00 min : 11 sec

INFO <85021278> - Device2 LIFCL-17: Fast Configuration

INFO <85021298> - Operation Done. No errors.

INFO <85021371> - Elapsed time: 00 min : 09 sec

INFO <85021373> - Operation: successful.
```

At the bottom of the window, there is a tab bar with 'Output' (selected) and 'Tcl Console'.

**Figure 3.12. Lattice Radian Programmer Output Window**

## 4. CertusPro-NX Sensor to Ethernet Bridge Board Interface Support

The CertusPro-NX Sensor to Ethernet Bridge Board supports various onboard interfaces. The sections below describe key onboard interfaces supported on the board.

### 4.1. Camera Sensor Interface

Figure 4.1 shows the block diagram of the camera sensor interface on the CertusPro-NX Sensor to Ethernet Bridge Board. This connector is used to interface with a camera board to bring MIPI camera data into the CrossLink-NX FPGA device. This 120-Pin connector can support up to 2 MIPI channels with up to 4 data lanes on each MIPI channel.

Example board and camera that can be connected to this connector:

- [Leopard Imaging Camera Adapter Board](#)
- [IMX274 Camera for Leopard Imaging Camera Adapter Board](#)
- [E-con Systems Camera Module with Sony IMX715 Sensor](#)

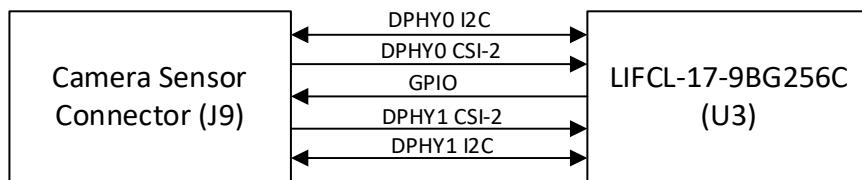

Figure 4.1. Camera Sensor Interface

### 4.2. SFP+ (Small Form-Factor Pluggable) Interface

Figure 4.2 shows the block diagram of the SFP+ ports on the CertusPro-NX Sensor to Ethernet Bridge Board. SFP+ is an enhanced version of the SFP Specification. There are two 10 Gbps Ethernet ports that are connected to the CertusPro-NX FPGA device, connector 0 is on J2/J3 and connector 1 is on J4/J5. See Figure 1.1 for connector 0 and connector 1 locations. These ports are used to send data to the downstream host system.

SFP+ connector 0 and connector 1 each have their own unique MAC Addresses and in sequential order. Connector 0 will have the lower MAC Address of the two. Connector 1's MAC Address will be Connector 0's MAC Address plus one.

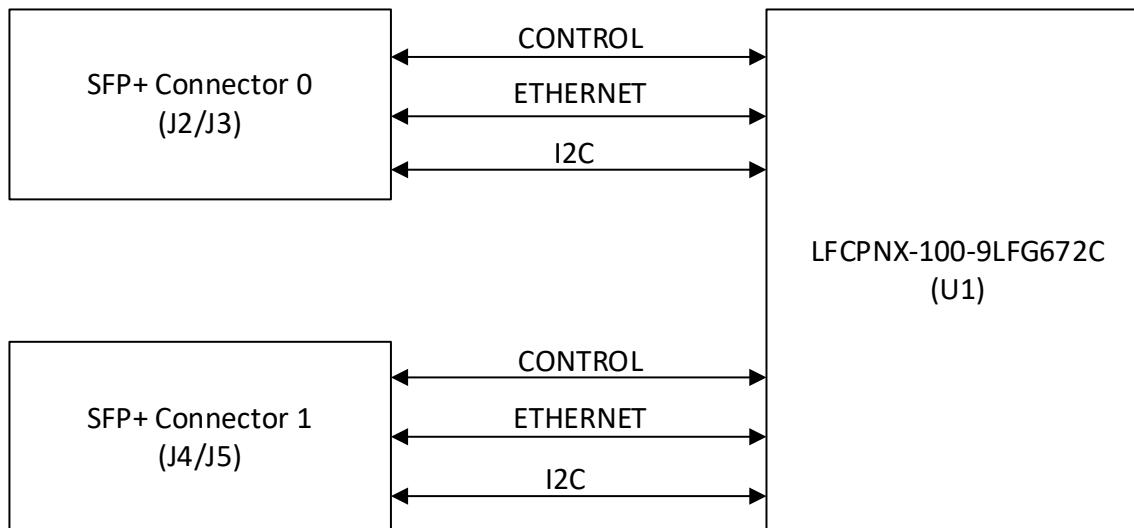

Figure 4.2. SFP+ Interface

### 4.3. FMC Interface

CertusPro-NX Sensor to Ethernet Bridge Board supports the VITA 57 FMC Specification through the J1 connector which uses the Samtec Inc. ASP-134486-01 400-Pin receptacle. The FMC connector allows users to expand the CertusPro-NX's capabilities through connection of 3rd party FMC mezzanine cards. The J1 FMC connector implements a subset of the High Pin Count (HPC) FMC implementation through the CertusPro-NX FPGA device. See [FMC Connector](#) section for details.

- Single Ended / Differential Signals – 64 / 32 Pairs
- Differential Clocks – 6
- Transceiver differential pairs – 8
- Transceiver differential clocks – 2

## 5. Power Supply

The power supply to the CertusPro-NX Sensor to Ethernet Bridge Board is provided from the J23 USB Type-C connector.

Figure 5.1 shows a high-level power distribution on the CertusPro-NX Sensor to Ethernet Bridge Board. 20 V is supplied through the USB Type-C connector and the board converters create the remaining 12.0 V, 3.3 V, 2.5 V, 1.8 V and 1.0 V supplies required by the board components.

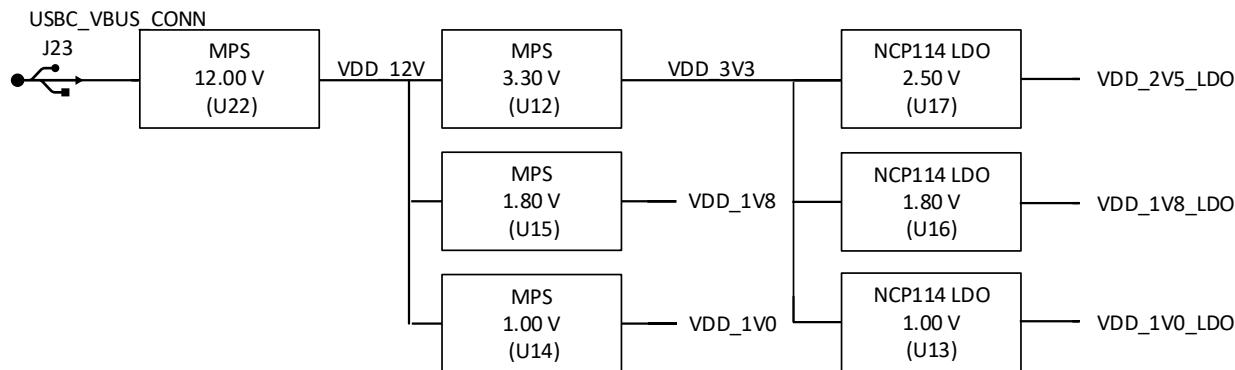

Figure 5.1. Power Supply Block

Table 5.1 lists the board voltage rails including rail source voltage and voltage on net.

Table 5.1. Device Power Rail Summary

Voltage Rail	Power Source Reference	Input to Power Source Reference (V)	Voltage on Net (V)
USBC_VBUS_CONN	J23	N/A	20.00
VDD_12V	U22	20.00	12.00
VDD_3V3	U12	12.00	3.30
VDD_2V5_LDO	U17	3.30	2.50

## 7. Clocks

**Table 7.1. Clocks to FPGA**

Clock Reference	Net Name	Frequency	I/O Standard	FPGA	BANK	BALL
Y1	CPRO_ETH_REFCLK_P CPRO_ETH_REFCLK_N	161.132813 MHz	HCSL	CertusPro-NX	SERDES	F20/E20
Y2	XIN_SYNTH XOUT_SYNTH	50.00 MHz		N/A	N/A	N/A
Y3	CLNK_PCLK_R	125.00 MHz	LVCMOS18	CrossLink-NX	1	F16
Y6	CPRO_PCLK_R	125.00 MHz	LVCMOS18	CertusPro-NX	1	R4

## 8. Status Indicators

The LED status indicators on the board show the application status. [Table 8.1](#) lists the status LED I/O map.

The INITN pin is a status pin and one of the functions is to indicate an error during configuration.

The DONE pin is asserted after configuration has successfully completed and the FPGA goes into User Mode.

See [sysCONFIG User Guide for Nexus Platform \(FPGA-TN-02099\)](#) for details.

**Table 8.1. Status LED I/O Map**

Label	LED	FPGA	Bank	Pin	Color
CPRO INITN	DS1	CertusPro-NX	0	G2	Red
CLNK INITN	DS2	CrossLink-NX	0	D11	Red
CPRO DONE	DS3	CertusPro-NX	0	G5	Green
CLNK DONE	DS4	CrossLink-NX	0	B16	Green

## 9. Pushbuttons

**Table 9.1** lists the pushbuttons available on the CertusPro-NX Sensor to Ethernet Bridge Board. Pushbutton S2 allow you to assert a reset to both FPGA devices.

**Table 9.1. Pushbutton I/O Map**

Pushbutton	FPGA	Bank	Pin	Note
S1	Not Populated			
S2	CertusPro-NX	1	N9	Reset to CertusPro-NX
	CrossLink-NX	1	F15	Reset to CrossLink-NX

## 10. Ordering Information

This board is included as part of a kit, and not available as a separate item. The part number in [Table 10.1](#) is for reference only, so it is clear which board is described in this document. Visit [www.latticesemi.com/boards](http://www.latticesemi.com/boards) for the latest ordering information.

**Table 10.1. Reference Part Number**

Description	Ordering Part Number
CertusPro-NX Sensor to Ethernet Bridge Board	LF-SNSR-ETH-EVN

## Appendix A. CertusPro-NX Sensor to Ethernet Bridge Board BOM
