

IR RECEIVER 40KHZ

Weight 3 g

DESCRIPTION

The IR receiver is a device that detects the modulated IR radiation emitted by the remote controls. The IRM-56384 detects IR radiation on a standard frequency of 38kHz and outputs signal to its output pin, which can be read with a microcontroller. Thus, it enables project management via the remote control.

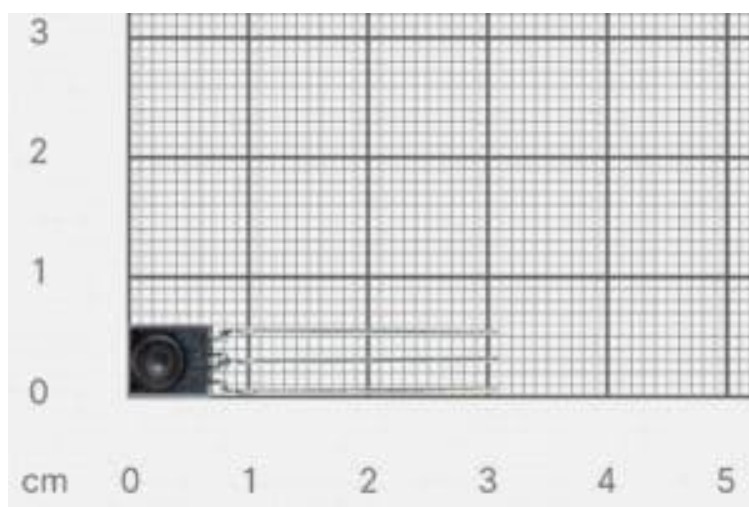

FEATURES

- Part number: IRM-56384
- Frequency: 38kHz
