

## DESOLDERING PUMP

**Weight** 41 g

---

### DESCRIPTION

Once you learn how to solder, you notice that your soldering isn't perfect. Desoldering pump is a tool that should be on the table of each maker/electronics engineer because it allows easy removal of excess solder, thus repairing short circuits or removing the components from the board. It works on the principle of "sucking in" the solder (liquid state) inside itself. It is completely safe to use.
