

SMART LED WS2812B RING7

Weight 5 g

DESCRIPTION

WS2812B is an extremely interesting LED that can emit light in red, green or blue - or any combination of these three colors, able to show a total of approximately 16 million different colors. On this board, diodes are arranged in a circle. They are controlled by a single pin with only a few lines of code from Arduino IDE. That's possible thanks to the integrated controller inside the LED itself!

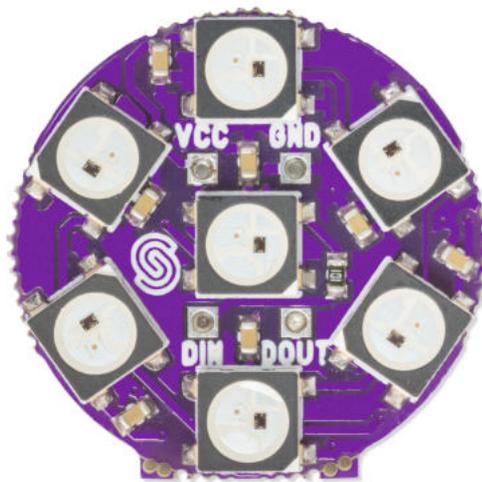

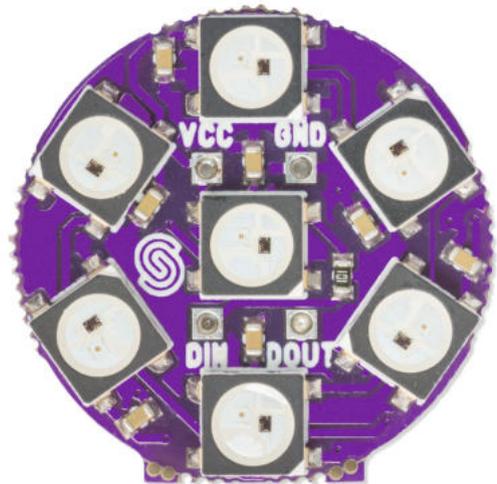

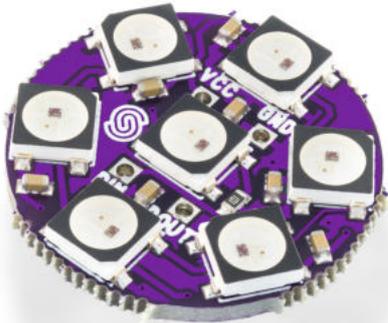

FEATURES

- Number of LEDs: 7
- Voltage: 5V
- LED type: WS2812B
- Current: 18mA per LED
- Circle diameter: 23 mm / 0.9 inch
