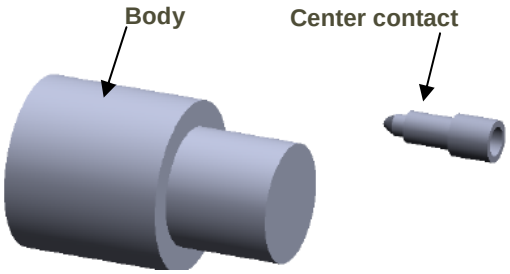
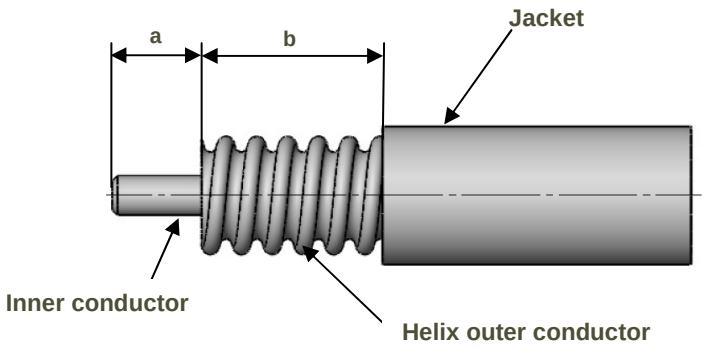
COMPONENTS

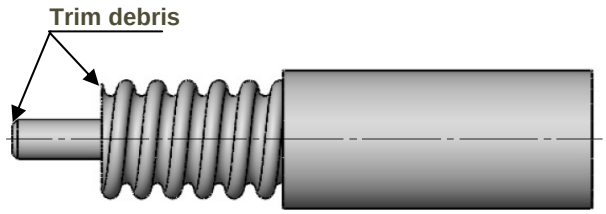


STRIPPING DIMENSION



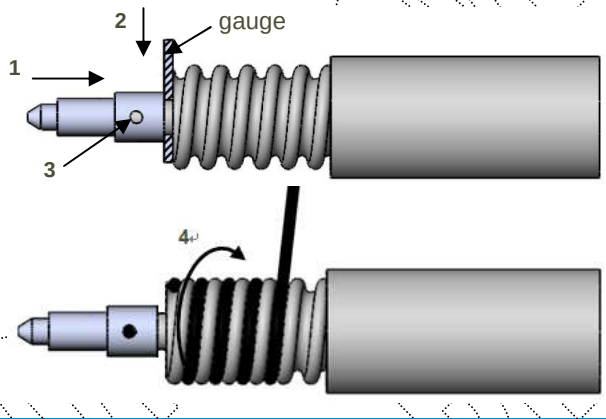
1

- Strip the cable.
- Do not damage the outer conductor.
- The end surface of inner conductor should be chamfered.
- Remove impurities such as copper scraps and burrs on the end surface of the cable.



2

- Insert center contact on the cable.
- Put solder gauge(1.6mm) between center contact and cable. Push the center contact to the guage until it stops
- Solder center contact.
- Wrap the cable by solder wire (Dia 1.2mm).



3

- Push the cable into the connector body, until it stops.
- Use the reserved solder wire to wrap the cable to fill the space between cable and connector.
- Solder the connector body with cable.
