Taping end caps, wrapping for abrasion protection or temporarily securing —this tape will suit your needs for inside or outside plant applications as the handiest tool in your kit. The special formula adhesive and extra-tough backing offer you superior adhesion and excellent conformability over extended temperature ranges, thus reducing your inventory needs to one vinyl tape.

Available in craftsman size rolls to fit your specific in-the-field use, this 0.22 mm (8-1/2 mil) tape releases smoothly from the roll in zero weather and will not ooze adhesive in hot climates. The 38 mm x 13.5 m (1-1/2" x 44') roll is especially suited as the splicer's roll, for outside plant usage.

88T tape resists: water, acids, alkalies, and is flame retardant. It is weather resistant and not affected by sunlight.

The thick, consistent lubricant does not liquefy or separate with hot aging; it scoops and applies easily to wire and cable without runs or drips in hot temperatures; and it will not evaporate too soon after pulls. Because it can be immersed in water for 30 minutes with minimal weight loss, it is also the choice for wet weather applications.
