PRODUCT OVERVIEW

BFHKL-2492+ is a miniature low-temperature co-fired ceramic (LTCC) ultra-high stopband rejection band pass filter with a 22 to 28 GHz passband that supports a variety of applications. This model achieves 40 dB typical stopband rejection up to 67 GHz when mounted on coplanar waveguide layouts. Housed in a small 4.95 mm by 3.65 mm ceramic form factor, the filter is ideal for dense signal chain PCB layouts where it complements MMIC size and performance. The BFHKL family with integrated interposer board enables installation onto PCB layouts with automated manufacturing equipment. This model provides a 3.3 dB typical insertion loss over a wide band due to its rugged monolithic construction. The LTCC fabrication process assures minimal RF performance variation while delivering a product that is well-suited for environmental extremes of high humidity and temperature.

KEY FEATURES

Features	Advantages

1. Tested on Evaluation Board P/N TB-BFHKI-2492C+. Measured with the connector and feedline effects de-embedded using the 2XThru IEEE P370 method.

2. Bi-directional, RF1 and RF2 ports can be interchanged.

3. This component should not be used as a DC block. In applications with DC voltage and/or current at either the input or output ports, external DC-blocking capacitors are required.

4. Typical variation ±3%.
