PRODUCT OVERVIEW

LHY-84+ (RoHS compliant) is a wideband amplifier offering high dynamic range. Lead finish is matte-tin. It has repeatable performance from lot to lot and is enclosed in a 2mm x 2mm MCLP package. It uses patented Transient Protected Darlington configuration and is fabricated using InGaP HBT technology.

KEY FEATURES

Feature	Advantages
Broad Band: DC to 7 GHz	Broadband covering primary wireless communications bands: CATV & DBS, MMDS & Wireless LAN, LTE
Combination of high P1dB & OIP3: P1dB, +20.8 dBm at 10 MHz OIP3, +38.5 dBm at 10 MHz	The LHY-84+ matches industry leading IP3 performance relative to device size and power consumption. IP3 is typically 12-18 dB above the P1dB point. This feature makes this amplifier ideal for use in: • Driver amplifiers for complex waveform up converter paths • Drivers in linearized transmit systems • Secondary amplifiers in ultra High Dynamic range receivers
High Gain, 24 dB typ. at 100 MHz	Minimizes number of stages, PCB space and cost to achieve high gain.
Small 2 x 2mm, 6-lead MCLP package	Tiny footprint saves space in dense layouts while providing low inductance, repeatable transitions, and excellent thermal contact to the PCB.

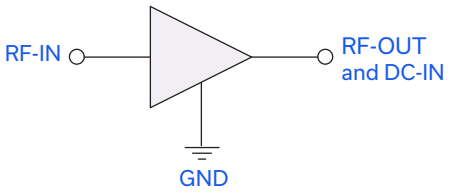
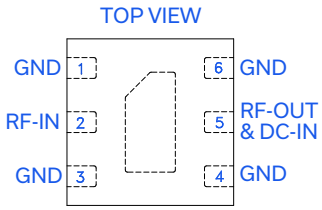
SIMPLIFIED SCHEMATIC AND PIN DESCRIPTION





Function	Pin Number	Description
RF-IN	2	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation
RF-OUT and DC-IN	5	RF output and bias pin. DC voltage is present on this pin; therefore a DC blocking capacitor is necessary for proper operation. An RF choke is needed to feed DC bias without loss of RF signal due to the bias connection, as shown in "Recommended Application Circuit", Fig. 2
GND	1,3,4,6 & paddle	Connections to ground. Use via holes as shown in "Suggested Layout for PCB Design" to reduce ground path inductance for best performance.
