## Product Overview

Mini-Circuits' M3SWA-2-50DRB+ is a MMIC SPDT absorptive switch with an internal driver designed for wideband operation from DC to 4.5 GHz supporting many applications requiring fast switching across a wide frequency range. This model provides excellent isolation, fast switching speed and high linearity in a tiny 3.25 x 3.25mm 8-Lead MCLP package.

## Key Features

Feature	Advantages
Wideband, DC to 4.5 GHz	One model can be used in many applications, saving component count. Also ideal for wideband applications such as military and instrumentation.
Absorptive switch	In the OFF condition, RF output ports which are not switched ON are terminated into 50Ω. This enables proper impedance termination of the circuitry following the RF output ports, preventing any unintended action such as oscillation.
High Isolation: <ul style="list-style-type: none"><li>• 62 dB at 1000 MHz</li><li>• 35 dB at 4500 MHz</li></ul>	High isolation significantly reduces leakage of power into OFF ports.
High linearity: Input power at P1dB, 25.4 dBm typ. Input IP3, +46.5 dBm typ.	High linearity minimizes unwanted intermodulation products which are difficult or impossible to filter in multi-carrier environments such as CATV, or in the presence of strong interfering signal from adjacent circuitry or received by antenna.
Form-fit compatible with M3SWA-250DR+	Fits into existing PCB footprint designed for M3SWA-2-50DR+ with minor electrical differences.
Tiny size, 3.25 x 3.25 mm MCLP package	Tiny footprint saves space in dense layouts while providing low inductance, repeatable transitions, and excellent thermal contact to the PCB.
