PRODUCT OVERVIEW

The PMA3-14LN+ is a GaAs PHEMT based wideband, low noise MMIC amplifier with a unique combination of low noise, high IP3, and high output power, over a wideband making it ideal for sensitive, high-dynamic range receiver applications. This design operates on a single supply of 6V, is well matched for 50Ω and comes in a tiny, low profile package (3 x 3 mm-12 lead), accommodating dense circuit board layouts.

KEY FEATURES

Feature	Advantages
Low noise, 1.8dB Typical up to 10GHz	Enables lower system noise figure performance.
High Dynamic Range <ul style="list-style-type: none">• OIP3 30.4dBm Typ. up to 8GHz• P1dB 22dBm Typ. up to 8GHz	The PMA3-14LN+ matches industry leading IP3 performance relative to device size and power consumption. The combination of the Design and PHEMT structure provides enhanced linearity over a board frequency range as evidence in the IP3 being approximately 9-11dB above the P1dB point. This feature makes this amplifier ideal for use in: <ul style="list-style-type: none">• Driver Amplifiers for complex waveform up converter paths• Drivers in linearized transmit systems• Secondary amplifiers in ultra-high dynamic range receivers
3 x 3mm 12-lead MCLP package	Tiny footprint saves space in dense layouts while providing low inductance, repeatable transitions, and excellent thermal contact to the PCB.
Wide bandwidth with flat gain <ul style="list-style-type: none">• ±0.7dB up to 10 GHz	Enables a single amplifier to be used in many wideband applications including defense, instrumentation and more.
