## **Product Overview**

THP-825+ is a 50 $\Omega$  high pass filter fabricated using SMT technology. This high pass filter covers from 825 to 4000 MHz. This series of filters are constructed in a tiny package offering dual advantage of superior lumped element filter performance in a space saving SMT package. These models are suitable for mass production without losing flexibility of small volume requirements. It has repeatable performance across lots and consistent performance across temperature.

# **Key Features**

Feature	Advantages		
Low insertion loss	Can be used in high performance applications.		
Good rejection	This enables the filter to attenuate spurious signals and reject harmonics for broad band frequency.		
Small size, 0.25" X 0.25" X 0.10"	The small surface mount package enables the THP-825+ to be used compact designs.
