Wideband Low Noise Bypass Amplifier TSS-53LNB3+

50 Ω 0.5 to 5 GHz

The Big Deal

- Very wideband, 500 MHz 5 GHz
- Ultra-flat gain, ±0.7 dB from 700 to 2100 MHz
- Low NF over entire frequency band, 1.5 dB typ.
- Internal bypass switching extends useable dynamic range
- 3V operation

Product Overview

CASE STYLE: DQ1225

Mini-Circuits TSS-53LNB3+ is a low-noise amplifier offering industry-leading performance over its full frequency range from 500 MHz to 5 GHz. It contains internal switching, allowing the user control of the amplifier to handle both high and low signal levels by bypassing the LNA in the presence of large signals. The TSS-53LNB3+ utilizes E-PHEMT technology to achieve excellent noise figure performance in a unique cascade configuration enabling the combination of very wide band performance and flat gain. This model comes in a tiny, 3 x 3mm, 12-lead MCLP package.

Key Features

Feature	Advantages		
Ultra-wideband: 500 MHz – 5 GHz	Ideal for a wide range of receiver applications including military, commercial wireless, and instrumentation.		
Very flat gain	Ideal for broadband or multi-band applications. Just one, cost-efficient model required for multiple frequency usage.		
Minimal external matching components required. 15 dB return loss typ.	Minimizes the need for external matching networks, simplifying circuit designs, and enabling the amplifier to operate over multiple bands in a single application circuit.		
Internal bypass switch feature	Unique design handles low to high signal levels with minimal noise distortion.		
Built-in DC blocking cap at RF-Out port & separate pads for RF-Out & Vdd	Simplifies biasing eliminates need for Bias-Tee at output.		
Compact size: 3 x 3 x 0.9 mm	Saves space in dense system layouts. Low inductance, repeatable transitions, an excellent thermal contact.		

Wideband Low Noise Bypass Amplifier

0.5-5 GHz

Product Features

- Wideband: 0.5-5 GHz
- Built-in Bypass switching
- Low Noise figure: 1.5 dB typ. at 2.0 GHz
- High Gain: 18.4 dB typ. at 2 GHz
- Ultra Flat Gain: 0.7 dB from 0.7 to 2.1 GHz
- P1dB: +15.1 dBm typ. at 2.0 GHz
- Minimal matching components
- Specified over full band operation

Typical Applications

- Wireless Base Station Systems
- Test and Measurement Systems
- Multi-Band Receivers

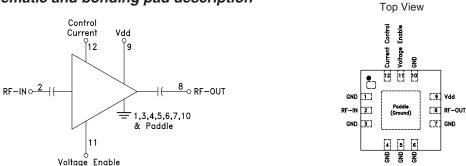

+ROHS Compliant The +Suffix identifies RoHS Compliance. See our web site for RoHS Compliance methodologies and qualifications

General Description

TSS-53LNB3+ (RoHS compliant) is an advanced ultra-flat gain Low Noise wideband amplifier fabricated using E-PHEMT technology offering extremely high dynamic range over a broad frequency range. It has integrated switches enabling users to bypass the amplifier during high signal conditions. In addition, the TSS-53LNB3+ has good input and output return loss over a broad frequency range without the need for external matching components. Lead finish is Sn-Ag alloy over Ni and is enclosed in a 12-lead 3x3 mm MCLP package for good thermal performance.

simplified schematic and bonding pad description

Function	Pad Number	Description (See Figure 2)
RF-IN	2	RF-Input pad. Connect to Ground Via L1. Add a DC blocking cap in series of appropri- ate value if required.
RF-OUT	8 RF-Output pad. No external DC blocking cap required.	
Current Control	t Control 12 Control Current pad, voltage level on this pad sets the ldd. Conne $k\Omega$ resistor.	
Voltage Enable	11	Voltage Enable Pad. Voltage level on this pad determines Amplifier is ON or bypassed.
Vdd	9	Supply Voltage Pad. Connect to Vdd via L2.
Ground 1,3,4,5,6,7,10 Paddle		Connect to ground. Use via holes as shown in "Suggested Layout for PCB Design" to reduce ground path inductance for best performance.

Electrical Specifications¹ at 25°C, Zo=50 Ω and V_{dd}=3V, unless otherwise noted

1. Measured on Mini-Circuits Characterization test board TB-780+. See Characterization Test Circuit (Fig. 1)

Measured of Mini-Circuits Characterization
 Current increases at P1dB
 (Current at 85°C - Current at -45°C)/130)

Absolute Maximum Ratings⁴

Parameter		Ratings		
Operating Temperature	(ground lead)	-40°C to 85°C		
Storage Temperature		-65°C to 150°C		
Total Power Dissipation		0.7 W		
Input Power	Amplifier-ON	8 dBm (continuous), 19 dBm (5 min max.)		
Input Fower	Amplifier Bypass	16 dBm (continuous), 29 dBm (5 min max.)		
DC Voltage Vdd		7.0 V		
DC Voltage Enable		7.0 V		
Max. Voltage on pad 8		15 V		

5. Permanent damage may occur if any of these limits are exceeded.

Electrical maximum ratings are not intended for continuous normal operation.

Enable Voltage (Ve) Fig. 1

	Min.	Тур.	Max.	Units
Amplifier-ON	2.7	3.0	3.3	V
Amplifier-Bypass	0	—	0.5	V

Switching Specifications	(Rise/Fall Time)
--------------------------	------------------

Parameter		Min.	Тур.	Max.	Units
	OFF TIME (50% Control to 10% RF)	_	55*	_	
Amplifier ON to Bypass FALL TIME (90 to 10% RF)		_	34	_	ns
ON TIME (50% Control to 90% RF)		_	960*	_	
Amplifier Bypass to ON RISE TIME (10% to 90% RF)		_	240	_	ns
Control Voltage Leakage		_	65	_	mV

* Measured with ±25nS uncertainty

Characterization Test Circuit

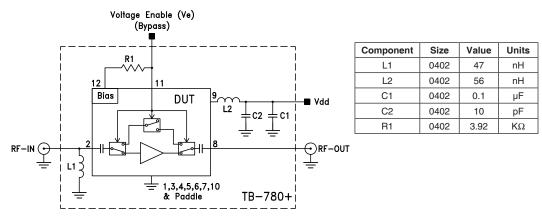

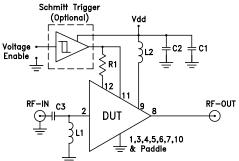

Fig 1. Block diagram of Test Circuit used for characterization. (DUT soldered on Mini-Circuits Characterization test board TB-780+) Gain, Return loss, Output power at 1dB compression (P1 dB), output IP3 (OIP3) and noise figure measured using Agilent's N5242A PNA-X microwave network analyzer.

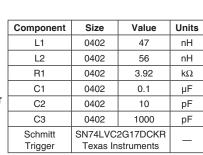

Conditions:

- 1. Gain and Return loss: Pin= -25dBm
- 2. Output IP3 (OIP3): Two tones, spaced 1 MHz apart, 0 dBm/tone at output.
- 3. Switching Time: Pin=-25 dBm at 500 MHz. Venable=3V at 10 kHz.

Vd=3V.

Recommended Application Circuit

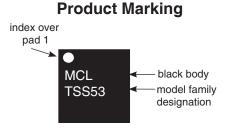

Fig 2. Recommended Application Circuit.

	Data Table			
Performance Data	Swept Graphs			
	S-Parameter (S2P Files) Data Set (.zip file)			
Case Style	DQ1225 Plastic package, exposed paddle, terminal finish: tin-silver over nickel.			
Tape & Reel	F66			
Standard quantities available on reel7" reels with 20, 50, 100, 200, 500 or 1K devices.				
Suggested Layout for PCB Design	PL-421			
Evaluation Board TB-779-3+				
Environmental Ratings	ENV12			

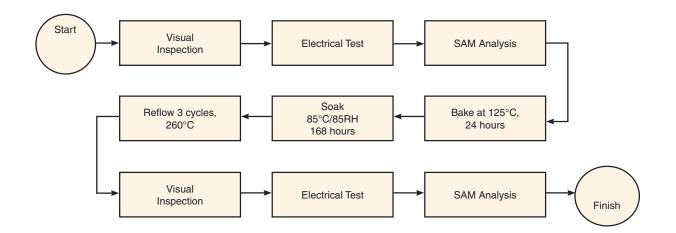

ESD Rating

Human Body Model (HBM): Class 1A (250 to <500V) in accordance with ANSI/ESD STM 5.1 - 2001

Machine Model (MM): Class M1 (pass 50V) in accordance with ANSI/ESD STM5.2-1999

MSL Rating

Moisture Sensitivity: MSL1 in accordance with IPC/JEDEC J-STD-020D

Additional Notes

- A. Performance and quality attributes and conditions not expressly stated in this specification document are intended to be excluded and do not form a part of this specification document.
- B. Electrical specifications and performance data contained in this specification document are based on Mini-Circuit's applicable established test performance criteria and measurement instructions.
- C. The parts covered by this specification document are subject to Mini-Circuits standard limited warranty and terms and conditions (collectively, "Standard Terms"); Purchasers of this part are entitled to the rights and benefits contained therein. For a full statement of the Standard Terms and the exclusive rights and remedies thereunder, please visit Mini-Circuits' website at www.minicircuits.com/MCLStore/terms.jsp
