Product Description

A compact and flexible level probe for measuring the level of conductive liquids, i.e overfill, dry run protection or pump control.
A total measurements system consist of a multiple probe-head, 1-5 electrodes and a control unit.
The electrode length can be freely defined be means of electrode extention units - with or without isolation.

Specifications

Probe Head		
Material		PP (Polypropylen)
No of electrodes	CLH3	3
	CLH5	5
Electrode connection		M4
Tightening torque		2.7 Nm by hand -K & -P
Cable connection		Screw terminals
Electrodes		
Material		Stainless steel AISI316/DIN1.4401
Length	CLE1	1000 mm
	CLE2	2000 mm
Diameter		Ø 4 mm
Isolation	CLE.K.	Kynar (PVDF)
	CLE.P.	Polyolefine (FR)
Environment		
Overvoltage category		III (IEC 60664)
Degree of protection		
Housing		IP 65
Electrode connections		IP 68
Pollution degree		2(IEC 60664/60664A, 60947-1)
Operating temperature		-20° to +90°C (-4° to +194°F)
Storage temperature		-40° to +100°C (-40° to +212°F)
Pressure		5 bar at 60°C

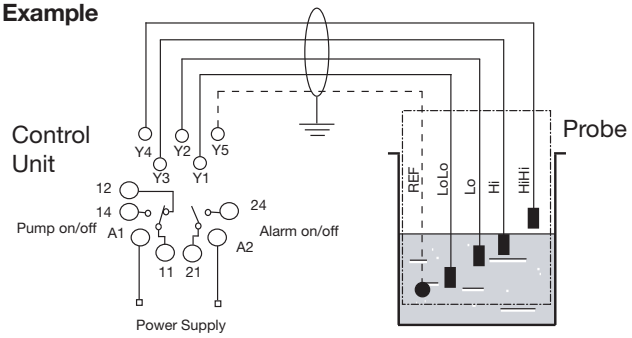
Specifications (cont.)

Weight	
Probe Head	260 g
Electrodes	107 g
CE marking	IEC 529

Mode of Operation

Functionality - example
The diagram shows the level control system connected as max. and min control, i.e. registration of 2 levels + 2 alarm levels. The relays react to the low alternating current created when the electrodes is in contact with the liquid.
The reference (Ref) must be connected to the container or if the container are made of a nonconductive material, to an additional electrode. In the diagram this electrode is shown by the dotted line.

Example



Electrodes
Cut or extend the electrodes to the desirable length. If using extended electrodes, place the enclosed isolation tube over the extension joint, and heat it with a heat gun. Mount the electrodes in the probehead by means of the M4 screw inserts. Take care not to damage the isolation material of the isolated electrodes.

Connection cable
2, 3, 4 or 5 conductor PVC cable, normally screened. Cable length: max. 100 m. The resistance between the cores and the ground must be at last 200k. In normal cases it is recommended to use screened cable between probe and controller, e.g. where the cable is placed in parallel to the load cables (mains). The screen has to be connected to Y5 (reference).
