

Smart Dupline® Decentralized Analog Input Module Type SHPINV324

CARLO GAVAZZI

- 3 x 0-10 VDC analog inputs
- 24 VDC
- Small dimension housing for decentralized installation inside wall-box or environmental sensor housings

Product Description

SHPINV324 is an input module with 3 analog inputs. The compact size of the module makes it possible to fit it into a wall-box or an environmental sensor housing, thereby enabling a decentralized installation concept where the Dupline® bus and DC power are multi-dropped from sensor to sensor. This simplifies

the wiring to the Smart Dupline® system compared to traditional star wiring connections, reduces the number of DDC's and sub-panels required and provides a higher flexibility for last-minute changes and enhancements. The module has 3 x 0-10 VDC inputs. It is fully programmable via the SH tool.
