Monitoring Relays Tachometer Type SM 155

Product Description

SM155 monitors the actual Knob adjustable set level on RPMs of a motor by a relative scale. Namur/DIN 19234 sensor or a metallic contact.

- Tachometer relay
- Measuring ranges: 30 - 300 R.P.M. 200 - 2000 R.P.M. 1000 - 10000 R.P.M.
- Knob-adjustable set level
- Controlled by Namur/DIN 19234 sensor or metallic contact
- Connection for moving-coil instrument
- 10 A SPDT output relay
- LED indication for relay ON
- AC or DC power supply

Mode of Operation/Level Setting

The relay is controlled by mechanical triggering, e.g. microswitch, reed relay, limit switch etc. (examples 1 and 2), or by electronic triggering, e.g. inductive or capacitive sensors (NAMUR/DIN 19234) (examples 3 and 4).

Examples 1 and 3

The relay operates when the number of R.P.M. exceeds the set value.

The relay releases when the number of R.P.M. is less than the set value. See hysteresis.

Example 2 and 4

By interconnecting pins 8 and 11 the relay function is inverted, i.e. the relay releases when the number of R.P.M. exceeds the set value

The relay operates when the number of R.P.M. is less than

the set value. See hysteresis. Instrument connection

A moving-coil instrument with a scale calibrated in R.P.M. can be connected to the SM 155. The instrument has 1 mA full scale deflection.

The relay generates max. 8.2 V on the instrument terminals (pins 8 and 9) across an internal resistance of 8.2 k Ω in the relay. The ideal internal

resistance of the instrument is 110 Ω . A deviation in the internal resistance of ± 100 Ω results in an error of $\pm 1\%$.
