Crimping Tool Part Number 9504 -21 -0

Same crimping tool (9504 -21 -0) is used for crimping '0' AWG wire and '4' AWG wire

Disclosure Statement:

Positronic Industries cannot be held responsible for defective crimps when customer utilizes other vendor's crimp tools. Samples of '0' AWG wire with strands combination of 300/26, 478/28, 292/26 have been crimped and tested at factory and are deemed compatible with our crimp tool. Consult factory prior to utilizing strands combinations not called out above.

Recommended Assembly Procedure For Crimp Termination:

1. Carefully strip back the cable insulation by 20.00mm [0.787] inch without damaging any of the conductor strands.
2. Insert the conductor wire strands into the crimp barrel at the rear of the contact. Ensure that all of the conductor wire strands are captured within the crimp barrel and that the cable conductor wire is visible through the inspection hole.
3. Utilizing the crimping tool, crimp the contact (as shown) making sure that the cable remains straight, for a distance of one meter or the entire length of cable if less than one meter in length from the crimping die, and touches the contact stopper while performing the crimp operation as shown in figure A and B below.

FIGURE 'A' Male contact

FIGURE 'B' Female contact

4. Examine crimp joints to ensure that the crimp is satisfactory.
5. Insert the crimp contact into the insulator and then visually align the locking clip groove and press in the locking clip. (As shown in Insertion and Extraction of Size 0 contact on page 7)
6. Ensure that the locking clip is flush with insulator.
