

AEC-Q200

This component was always RoHS compliant from the first date of manufacture.

- Ideal for 303.825 MHz Remote Control and Security Transmitters
- Very Low Series Resistance

- Quartz Stability
- Complies with Directive 2002/95/EC (RoHS)
- Tape and Reel Standard per ANSI/EIA-481

The RO3104C is a true one-port, surface-acoustic-wave (SAW) resonator in a surface-mount ceramic case. It provides reliable, fundamental-mode, quartz frequency stabilization of low power transmitters operating at 303.825 MHz. This SAW resonator is designed for transmitters used in remote control and wireless security applications operating in the USA under FCC Part 15 and in Canada under DoC RSS-210.

Electrical Connections

The SAW resonator is bidirectional and may be installed with either orientation. The two terminals are interchangeable and unnumbered. The callout NC indicates no internal connection. The NC pads assist with mechanical positioning and stability. External grounding of the NC pads is recommended to help reduce parasitic capacitance in the circuit.
