## ■ PIN DESCRIPTIONS

Pin Number	Pin Name	Functional Description
A3,A4,A5,B3,B4,C3, C4,D4,H2,H3,H4,H5, G3,G4,F3,F4,E4,D3, H1	A0 to A18	Address Input pins Select 524,288 words in FRAM memory array by 19 Address Input pins. When these address inputs are changed during /CE equals to “L” level, reading operation of data selected in the address after transition will start.
B6,C5,C6,D5,E5,F5, F6,G6,B1,C1,C2,D2 E2,F2,F1,G1	I/O0 to I/O15	Data Input/Output pins These are 16 bits bidirectional pins for reading and writing.
B5	/CE	Chip Enable Input pin In case the /CE equals to “L” level and /ZZ equals to “H” level, device is activated and enables to start memory access. In writing operation, input data from I/O pins are latched at the rising edge of /CE and written to FRAM memory array.
G5	/WE	Write Enable Input pin Writing operation starts at the falling edge of /WE. Input data from I/O pins are latched at the rising edge of /WE and written to FRAM memory array.
A2	/OE	Output Enable Input pin When the /OE is “L” level, valid data are output to data bus. When the /OE is “H” level, all I/O pins become high impedance (High-Z) state.
A6	/ZZ	Sleep Mode Input pin When the /ZZ becomes to “L” level, device transits to the Sleep Mode. During reading and writing operation, /ZZ pin shall be hold “H” level.
A1,B2	/LB, /UB	Lower/Upper byte Control Input pins In case /LB or /UB equals to “L” level, it enables reading/writing operation of I/O0 to I/O7 or I/O8 to I/O15 respectively. In case /LB and /UB equal to “H” level, all I/O pins become High-Z state.
D6,E1	VDD	Supply Voltage pins Connect all two pins to the power supply.
D1,E6	VSS	Ground pins Connect all two pins to ground.

Note: Please refer to the timing diagram for functional description of each pin.

### ▪ Current method of Latch-Up Resistance Test

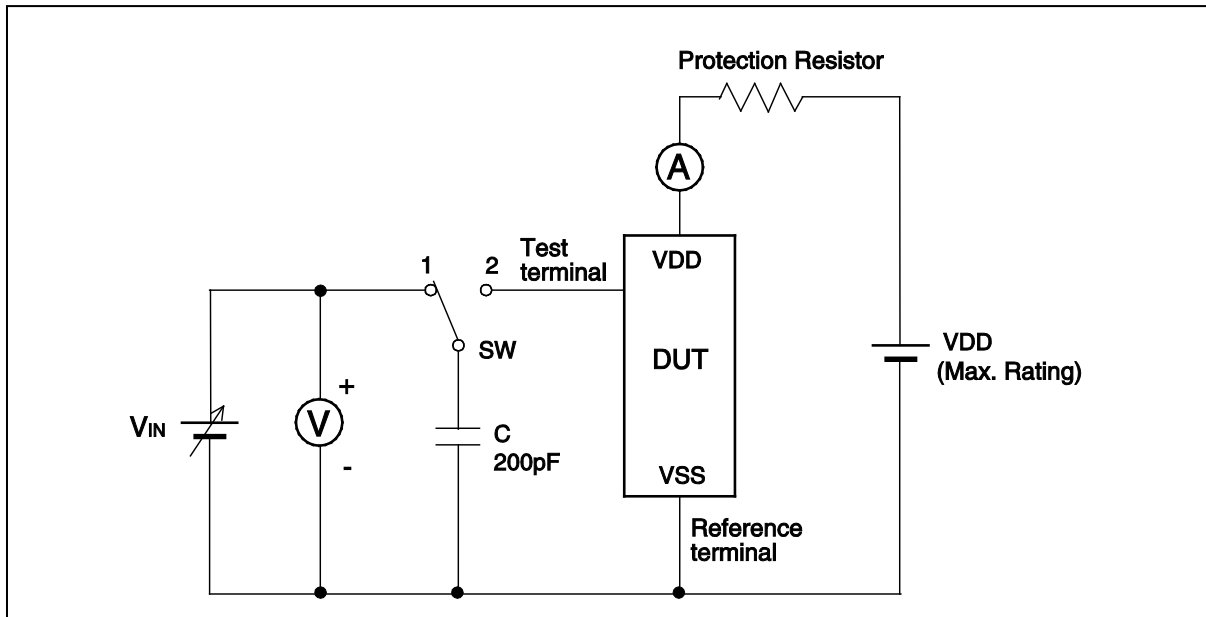

Note: The voltage  $V_{\text{IN}}$  is increased gradually and the current  $I_{\text{IN}}$  of 300 mA at maximum shall flow.

Confirm the latch up does not occur under  $I_{\text{IN}} = \pm 300 \text{ mA}$ .

In case the specific requirement is specified for I/O and  $I_{\text{IN}}$  cannot be 300 mA, the voltage shall be increased to the level that meets the specific requirement.

## ▪ C-V method of Latch-Up Resistance Test

Note: Charge voltage alternately switching 1 and 2 approximately 2 sec intervals. This switching process is considered as one cycle.

Repeat this process 5 times. However, if the latch-up condition occurs before completing 5times, this test must be stopped immediately.
