

Omnipolar Digital TMR Latch/Sensor for Consumer & Industrial Applications

#### **Product Description**

The CT83x Series of integrated omnipolar magnetic latches and analog sensor are designed for consumer and industrial switching applications. It is based on Crocus Technology's patented Magnetic Logic Unit<sup>™</sup> (MLU<sup>™</sup>) technology with integrated CMOS process to provide a monolithic solution for superior sensing performance.

This series of magnetic latches feature an industry leading low power consumption as low as 200 nA. They are capable of handling large air gap applications with low magnetic fields down to 0.9 mT with best in class high frequency performance. The CT83x is offered in active-low push-pull CMOS and open drain configuration for design flexibility. The latches are available in a low profile and small form factor 4-lead LGA and 3-lead SOT-23 packages, providing cost effective and space-saving solutions for high volume manufacturing. Please contact factory for custom solutions.

SOT-23 Package

1.40 x 1.40 x 0.44 mm LGA

#### **Features and Benefits**

- High sensitivity, B<sub>OP</sub> as low as 0.9 mT
- Resistant to mechanical stress
- Ultra-low power consumption as low as 200 nA
- Digital CMOS push-pull and open drain options
- Low profile and small form factor packaging
- RoHS Compliant

### **Application Examples**

- IoT devices
- Smartphones, tablets, and laptops
- Door or lid closure detection
- Reed switch replacement
- Motor controllers
- Proximity detection
- Power switch or open-close detection
- Tamper-proofing for utility meters
- Fluid level detection

#### Table 2: Absolute Maximum Ratings

Exceeding the absolute maximum ratings may cause permanent damage. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

| Parameter                                   | Symbol                             | Min  | Max                   | Unit |
|---|------------------------------------|------|-----------------------|------|
| Supply Voltage                              | V <sub>DD</sub>                    | -0.3 | 4.0                   | V    |
| Push-pull Output (Active LOW)               | V <sub>OUT_PP</sub>                | -0.3 | V <sub>DD</sub> + 0.3 | V    |
| Open Drain Output Voltage (Active LOW)      | V <sub>OUT_OD</sub>                | -0.3 | 5.5                   | V    |
| Analog Output                               | V <sub>ANA</sub>                   | -0.3 | V <sub>DD</sub> + 0.3 | V    |
| Input and Output Current                    | I <sub>IN</sub> / I <sub>OUT</sub> | -10  | +10                   | mA   |
| Junction temperature                        | TJ                                 | -40  | +125                  | °C   |
| Storage temperature                         | T <sub>STG</sub>                   | -65  | +150                  | °C   |
| Soldering temperature                       | T <sub>SOL</sub>                   |      | +260                  | °C   |
| ESD Level, Human Body Model per JESD22-A114 | V <sub>ESD_HBM</sub>               | ±4.0 |                       | kV   |

#### **Table 3: Recommended Operating Conditions**

The Recommended Operating Conditions table defines the conditions for the actual device operation. Recommended operating conditions are specified to ensure optimal performance to the data sheet specifications. Crocus Technology does not recommend exceeding them or designing to absolute maximum ratings.

| Parameter               | Symbol           | Conditions | Min | Тур | Max  | Unit |
|-------------------------|------------------|------------|-----|-----|------|------|
| Supply Voltage          | V <sub>DD</sub>  |            | 2.7 | 3.0 | 3.6  | V    |
| Output Voltage          | V <sub>OUT</sub> |            |     |     | 3.6  | V    |
| Operating Magnetic Flux | В                |            |     |     | 12   | mT   |
| Ambient Temperature     | T <sub>A</sub>   |            | -40 | +25 | +125 | °C   |
| Junction Temperature    | TJ               |            | -40 |     | +125 | °C   |

#### Table 4: Thermal Properties

Junction-to-ambient thermal resistance is a function of application and board layout and is determined in accordance to JEDEC standard JESD51 for a four (4) layer 2s2p FR-4 printed circuit board (PCB). Special attention must be paid not to exceed junction temperature  $T_{J(MAX)}$  at a given ambient temperature.

| Parameter  | Symbol                 | Min | Тур | Max | Unit |
|--|------------------------|-----|-----|-----|------|
| Junction-to-Ambient Thermal Resistance for SOT23 Package | θ <sub>JA(SOT23)</sub> |     | 202 |     | °C/W |
| Junction-to-Ambient Thermal Resistance for LGA Package   | θ <sub>JA(LGA)</sub>   |     | 165 |     | °C/W |

| Characteristic  | Conditions               | Output     |
|-----------------|--------------------------|------------|
| Positive Field  | B > B <sub>OPS</sub>     | Low (ON)   |
| Positive Field  | 0 < B < B <sub>RPS</sub> | High (OFF) |
| Ne vetice Eicle | B < B <sub>OPN</sub>     | Low (ON)   |
| Negative Field  | 0 > B > B <sub>RPN</sub> | High (OFF) |

Omnipolar Digital TMR Latch/Sensor for Consumer & Industrial Applications

#### **Figure 51: Application Circuits**

A decoupling capacitor ( $C_{DD}$ ) between the supply voltage and ground is required with placement close to the magnetic switch. A typical capacitor value of 1  $\mu$ F (Ceramic) will suffice. For the open drain output, maximum V<sub>SYS</sub> should not exceed 5.5 V.

For the analog output, a simple RC filter is recommended on the ANA output as shown below:

#### CT834 Analog Output

Omnipolar Digital TMR Latch/Sensor for Consumer & Industrial Applications

(1) RoHS is defined as semiconductor products that are compliant to the current EU RoHS requirements. It also will meet the requirement that RoHS substances do not exceed 0.1% by weight in homogeneous materials. Green is defined as the content of Chlorine (CI), Bromine (Br) and Antimony Trioxide based flame retardants satisfy JS709B low halogen requirements of ≤ 1,000 ppm.

(2) MSL Rating = Moisture Sensitivity Level Rating as defined by JEDEC industry standard classifications.

(3) Device Marking for SOT23 is defined as XZ YWWS where XZ = part number, Y = year, WW = work week and S = sequential number. LGA is defined as X where X = part number and YZ = date code information.

Omnipolar Digital TMR Latch/Sensor for Consumer & Industrial Applications

### Figure 55: Tape & Pocket Dimensions for SOT23 Package

#### Notes:

- 1. Material: Conductive Polystyrene
- 2. Dimensions in mm.
- 3. 10 sprocket hole pitch cumulative tolerance ±0.2.
- 4. Camber not to exceed 1 mm in 100 mm.
- 5. Pocket position relative to sprocket hole measured as true position of pocket, not pocket hole.
- 6. (S.R.  $\Omega$ /sq) means surface electric resistivity of the carrier tape.

| E      | 1.75±0.10       |
| F      | 3.50±0.05       |
| 10Po   | 40.0±0.10       |
| W      | 8.0±0.20        |
| Т      | 0.25±0.02       |

Notice:

- 1. 10 Sprocket hole pitch cumulative tolerance is  $\pm 0.1$  mm
- Pocket position relative to sprocket hole measured as true position of pocket not pocket hole.
- 3. Ao & Bo measured on a place 0.3mm above the bottom of the pocket to top surface of the carrier.
- Ko measured from a plane on the inside bottom of the pocket to the top surface of the carrier.
- 5. Carrier camber shall be not than 1mm per 100mm through a length of 250mm.
