XM122 IoT Module

Datasheet v2.2

 © 2023 Copyright by Acconeer

Abstract

The XM122 is a reference module with optimized formfactor that can be used to support customer in their own design for commercial use, for evaluation and development purpose.

The XM122 is built around the nRF52840 Bluetooth® 5 SoC (System on Chip) from Nordic Semiconductor and features an integrated antenna for Bluetooth connectivity.

The XM122 can be used as a stand-alone module where customer can embed their application on top of the Acconeer RSS (Radar System Software). It can also be used as with an external host controller where communication to the module is through a register command protocol.

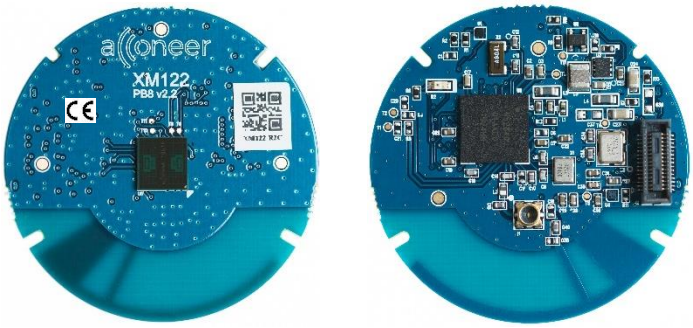

Figure 1. XM122 Top view (left) and XM122 bottom view (right).

1 Revision History

Revision	Comment
v1.0	Released version.
v2.0	Added chapter 6, Reference design description for XM122 R2D. Added chapter 2.5, No mounted battery connector support.
v2.1	Added chapter 8, Regulatory approval, CE marking.
v2.2	Updated Table 6.1.

This document applies to the following product:

Product name	Part number
XM122	XM122

XM122 marking:

2 Functional description

2.1 Overview

The XM122 comes with Nordic nRF52840 SoC and A111 Pulsed Coherent Radar (PCR) sensor, see ref [1]. The Nordic nRF52840 supports Bluetooth 5/Bluetooth Mesh/Thread/Zigbee/ 802.15.4/ANT/2.4 GHz.

The XM122 is delivered with a bootloader enabling customer to download Acconeer RSS software including SDK (Software Development Kit) for stand-alone usage where customer can embed their own application on top of Acconeer RSS software. Acconeer RSS software provides API to set A111 sensor configuration and to retrieve supported radar services and detector data.

XM122 offers support as well to act as controlled by external host through register command protocol on UART, SPI and I2C.

2.2 Product features

The XM122 is an IoT module based on Acconeer A111 pulsed coherent radar (PCR) and the Nordic nRF52840 SoC.

XM122 features:

- The A111 60 GHz Pulsed Coherent radar (PCR) with integrated baseband, RF front-end and Antenna in Package (AiP).
- Low power connected radar module.
- The nRF52840 protocol stack support for Bluetooth 5, Bluetooth mesh, Thread, Zigbee, 802.15.4, ANT and 2.4 GHz proprietary stacks and is built around the 64 MHz ARM® Cortex™-M4 CPU with 256 KB SRAM and 1 MB Flash.
- Integrated 2.4 GHz antenna with support for external 2.4 GHz antenna.
- Optional NFC antenna support for quick Bluetooth pairing via the PCB test points.
- Optimized circular form factor with a diameter of 33 mm.
- Wide single supply operating voltage range 2.0 V to 5.5 V.
- Operating temperature -40° to 85°C.
- External I/F support - SPI, UART, I2C, GPIO, Reset.
- SWD/JTAG for SW flash and debug.

The XM122 can be used for accurate distance measurement, tank level measurement, waste bin level measurement, parking space occupancy and presence detection:

- High precision distance measurements with configurable update frequency.
- Measures absolute range up to 7 m with an absolute accuracy in mm.
- Measures relative accuracy in 42 µm (using RSS software IQ service).
- Possible to recognize movement of multiple objects.

Easy integration:

- XM122 can be integrated behind plastic or glass without any need for a physical aperture. See ref [6] *User guide – Sensor Integration Electromagnetic Scattering* for more information.

2.3 Block diagram

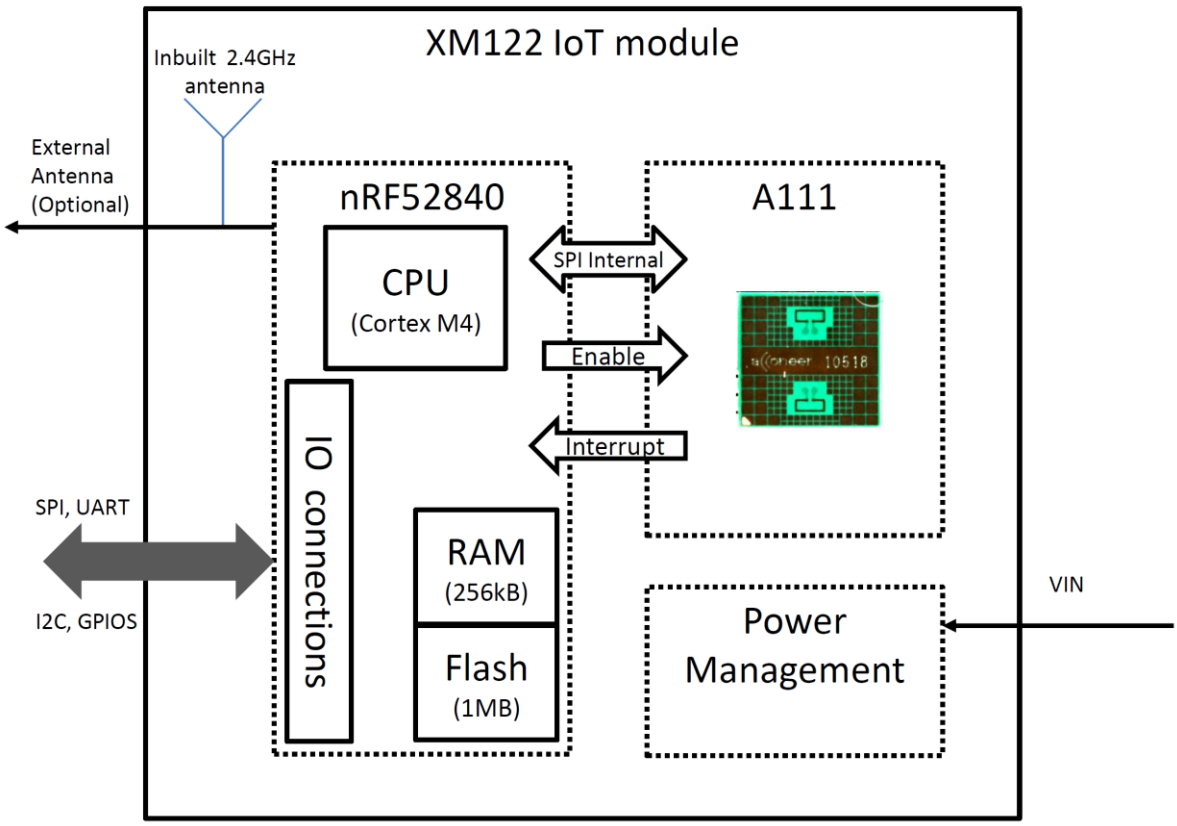

Figure 2.1. XM122 block diagram.

The XM122 block diagram shows the A111 60 GHz PCR radar connected to the nRF52840 microcontroller. The module provides a pin connector where the MCU external I/F are accessible including single voltage supply.

2.4 Module board connector and pin description

The board to board connector provides the external interface to the module. Figure 2.2 shows the connector footprint and Table 2.1 describes each signal.

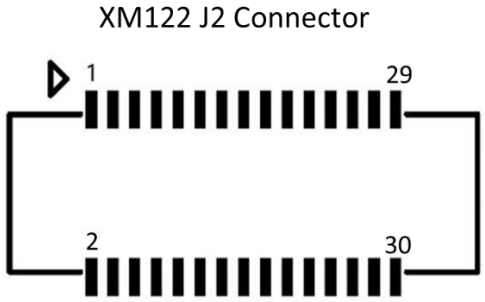

Figure 2.2. XM122 J2 connector footprint.

Pin Number	Signal	Description	nRF52840* pin
1	GPIO		P0.23
2	GND	Ground	-
3	GND	Ground	-
4	VIN	2.0-5.5 V external power supply. Pin 4 and Pin 6 are interconnected.	-
5	GPIO		P0.21
6	VIN	2.0-5.5 V external power supply. Pin 4 and Pin 6 are interconnected.	-
7	GND	Ground	-
8	GND	Ground	-
9	GPIO		P0.24
10	GPIO	Configurable as Analog Input.	P0.04
11	GND	Ground	-
12	GPIO	Configurable as JTAG Trace signal.	P0.11 TRACEDATA2
13	GPIO		P0.22
14	GPIO	Configurable as JTAG Trace signal.	P0.12 TRACEDATA1
15	GND	Ground	-
16	VDD	Regulated 1.8 V output voltage.	-
17	GPIO/UART_RX	Default configuration in Acconeer Module server SW is UART. Could also be used as miscellaneous GPIO.	P0.06
18	GPIO, nRESET	nRF52840 reset pin.	P0.18 nRESET

19	GPIO/UART_TX	Default configuration in Acconeer Module server SW is UART. Could also be used as miscellaneous GPIO.	P0.16
20	SWDIO	SWD interface for flash and debug.	SWDIO
21	GND	Ground	-
22	GPIO, SWO	SWD interface for flash and debug. Configurable as JTAG Trace signal.	P1.00 TRACEDATA0
23	GPIO	Configurable as JTAG Trace signal.	P0.07 TRACECLK
24	GND	Ground	-
25	GPIO	Configurable as JTAG Trace signal.	P1.09 TRACEDATA3
26	SWDCLK	SWD interface for flash and debug.	SWDCLK
27	GPIO/UART_RTS	Default configuration in Acconeer Module server SW is UART. Could also be used as miscellaneous GPIO.	P0.20
28	GND	Ground	-
29	GPIO/UART_CTS	Default configuration in Acconeer Module server SW is UART. Could also be used as miscellaneous GPIO.	P0.19
30	GPIO, DFU	Device Firmware Upgrade. Set low during reset to enter bootloader mode. Could also be used as miscellaneous GPIO.	P0.25

Table 2.1. J2 connector pinout.

2.5 Not mounted battery connector support

Not mounted battery connector (Reference Designator J3) supported on XM122 R2D PCB. See chapter 6 schematics for further information. Example of compatible battery connectors:

- Vertical Amphenol 10114828-10102LF
- Horizontal Amphenol 10114828-10102LF
- Horizontal Molex 532617002

2.6 Software options

The XM122 module can be used in two regimes:

- **Stand-alone module:** The module operates as an independent system. The application is customized to a specific use case by the customer and runs on the embedded MCU. The customers application is accessing the RSS API.
- **Controlled module:** The module is connected to an external host where the customer runs their application software. The customers are accessing the RSS API via a hardware interface through the module server, that provides register command protocol. The module output is either detector output data or service radar data through the XM122 external interfaces such as SPI, UART and I2C.

Using the XM122 as stand-alone module Acconeer offers SDK that provides RSS, hardware abstraction layer, device drivers and build system. Based on SDK it is possible for the customer to develop their own application. Both RSS and applications runs on the embedded MCU.

Using the XM122 as Controlled module Acconeer provides SW image including RSS and module server application that provides hardware interface accessing the RSS API through a register command protocol, see ref [3].

For further software information, see XM122 IoT Module Evaluation Kit User guide, ref [2].

2.7 MAC addresses

The XM122 module comes with a Static Random Bluetooth Address provided by the Nordic nRF52840 SoC. This address is assigned randomly during manufacturing. This static address can be used for evaluation.

 © 2023 Copyright by Acconeer

3 Interfaces

3.1 Module supply input

The XM122 support external single power supply for battery power applications, see table 4.2 recommended operating conditions.

Note that supply voltage conditions (E.g. slew rate) need to be taken into consideration according to nRF52840 datasheet, ref [5].

3.2 System functions

The XM122 IoT module supports system power states, see XM122 Module Software User guide, Ref [3] for further information.

Module RESET is supported by activating NRST pin (active low).

Module ERASE is used to reinitialize the MCU Flash content and some of its NVM (Non-Volatile Memory) bits to an erased state. See nRF52840 datasheet, ref [5] for further information.

3.3 Serial interfaces

The XM122 nRF52840 GPIO pins can be configured to support up to two UART, up to four SPI master or three SPI slave and up to two I2C compatible 2-wire master/slave external serial interfaces. See table 2.1 for HW configuration. See also nRF52840 datasheet, ref [5] for further information.

3.4 Digital I/O interfaces

The XM122 module support General Purpose IOs (GPIOs), 16 GPIOs are available. The GPIO pins are configurable for different functions, only the debug and RESET pins are fixed to specific GPIOs. See table 2.1 for HW configuration. See also nRF52840 datasheet, ref [5] for further information.

3.5 Analog I/O interfaces

The XM122 module support one analog input (pin 10 on XM122 connector J2) and up to four individual PWM outputs which can be assigned to any of the GPIO pins. See table 2.1 for HW configuration.

3.6 Module reset

The XM122 has an external reset option (Pin 18 on XM122 connector J2) that can be configured as a GPIO or RESET input.

3.7 Debug interface

The XM122 has 7 debug pins, SWDIO, SWDCLK and Trace signals. TRACE signals reuse GPIO pins. See table 2.1 for HW configuration.

4 Electrical specifications

4.1 Absolute maximum ratings

The below table shows the XM122 absolute maximum ratings over operating temperature range, unless otherwise noted:

Parameter	Description	Min.	Max.	Unit
VIN	power supply	-0.3	6.0	V
I/O	Voltage on I/O pins	-0.3	2.1	V
T_{OP}	Operating temperature range	-40	85	°C
T_{STG}	High temperature storage		125	°C

Table 4.1. Absolute maximum ratings.

Stresses beyond those listed in table 5.1 may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these conditions or at any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods of time may affect device reliability.

4.2 Recommended operating conditions

The below table shows the XM122 recommended operating conditions:

Parameter	Min.	Typ.	Max.	Unit
VIN, operating power supply voltage[1)]	2.0		5.5	V
I/O operating range	0		1.8	V
Operating temperature[1)]	-40		85	ºC

Table 4.2. Recommended operating conditions.

[1] Minimum battery voltage depends on battery internal resistance and temperature.

4.3 Power consumption summary

The below table summarizes the XM122 power consumption, maximum current ratings and average current ratings at power terminal at T_A = 25ºC and 2.0 V/3.0 V supply:

Parameter	Min.	Typ.	Max.	Unit
Average power consumption, 2.0 V supply, 0.1 Hz update rate		0.07 (1)		mW
Average power consumption, 3.0 V supply, 0.1 Hz update rate		0.08 (1)		mW
Average power consumption, 2.0 V supply, 1 Hz update rate		0.66 (1)		mW
Average power consumption, 3.0 V supply, 1 Hz update rate		0.67 (1)		mW
Average power consumption, 2.0 V supply,10 Hz update rate		6.43 (1)		mW
Average power consumption, 3.0 V supply, 10Hz update rate		6.51 (1)		mW
Idle current		3.75 (2)		µA

Table 4.3. Average power dissipation ratings at power terminal.

[1] Measuring window set to 0.6m, configuration with Envelope service, maximize SNR profile used. Bluetooth advertisement according to given update rate.

[2] Sensor is powered off and nRF52840 is in sleep mode (System ON) with full RAM retention and wake-up on RTC enabled.

4.4 RF specification

The below table shows the XM122 A111 PCR RF specification:

Parameter	Min.	Typ.	Max.	Unit
Center frequency fc		60.5		GHz
EIRP (Equivalent Isotropically Radiated Power)			10	dBm
TX HPBW (Half Power Beam Width), elevation plane (1)		45		degrees
TX HPBW (Half Power Beam Width), horizontal plane (1)		70		degrees

Table 4.4. XM122 RF specification.

(1) Based on simulation

The XM122 support Bluetooth v5 including BLE, mesh, long range and advertising extensions.

The below table shows the XM122 Bluetooth radio performance:

Parameter	Min.	Typ.	Max.	Unit
Frequency (40 channels)	2.4		2.48	GHz
Data rate		2		Mbps
Total radiated power (TRP)		5.5		dBm
Conducted RX sensitivity (BLE)		-97		dBm
Conducted RX sensitivity (Long range)		-101		dBm
Conducted total link budget		-109		dBm

Table 4.5. XM122 Bluetooth radio performance.

8 Regulatory Approval

To be noted is that some regulatory specifications also specify the usage of the module, so users of the module must check regulatory requirements for their own use case and determine if the regulatory approvals described below are sufficient.

8.1 ETSI

Hereby, Acconeer declares that the XM122 module is compliant with directive 2014/53/EU. The XM122 module fulfills the CE marking.

EU Type Examination Certificate

CTC advanced GmbH (formerly CETECOM ICT Services GmbH) | Untertuerkheimer Str. 6–10 | 66117 Saarbruecken | Germany | www.ctcadvanced.com

CTC advanced

Bundesnetzagentur
BNetzA-bS-02/51-52
authorized by the German Government to act as Notified Body in accordance with the RE Directive 2014/53/EU of 16 April 2014.

Product Manufacturer: see Certificate Holder

Product Designation: XM122

Product Description: IoT module

Conformity Assessment:

Essential requirements	Examined documentation	Result
EMC RED, Article 3.1b	Technical documentation including test report	conform
Radio Spectrum RED, Article 3.2	Technical documentation including test report	conform

EU Type Examination Certificate:
In accordance with Annex III of the European Council Directive 2014/53/EU on radio equipment, our opinion is that this equipment type complies with the essential requirements stated above.

Marking:
The product shall be marked with the CE marking as required in the Council Directive 2014/53/EU.

Annexes:
The certificate is only valid in conjunction with the following number of annexes: 1

Validity:
Conformity is provided unless changes/modifications have been done to the standard and/or assessed type of equipment.
