Power Input Connector

The product CS10768F120P-C121 uses a wide range power input: **DC 15~36V**. The total power consumption is normally about **10W**. The Power Input Connector is 3 Pin 3.81mm Screw Terminal Connector as Figure 3 shows. The Character “+” means power **Positive** input, The Character “-” means power **Negative** input. The Character “**G**” means system Ground. Table 1 has detailed descriptions about the connector definition.

Table 1

Power Input Pin Definition:		
Pin Number	Definition	Description
Pin 1	Positive Input	Connect to DC Power Positive Terminal
Pin 2	Negative Input	Connect to DC Power Negative Terminal
Pin 3	Ground	Connect to Power System Ground

ATTENTION:

*The system ground “**G**” has been connected to power negative “-” on board.*

Capacitive Touch

The product CS10768F120P-C121 uses ten-point capacitive touch.

ATTENTION:

Capacitive touch is very sensitive to power noise. Ripple voltage/current from the power adapter will cause the LCD ripples, and will also cause the capacitive touch malfunction: If you use the APK Multi-Touch under Android to test, you can find the touch point float. There are several ways to solve this problem:

1) Use a high quality power adapter. Or use battery to provide the power like cell phone or tablet PC.

*2) If user power adapter can't be good enough, there's another effective method to solve this problem: Make sure the CS10768F120P-C121 power input connector **Pin 3 really connect to user "Power System Ground"**. This method can eliminate the problem totally. User can also use another method to test this problem: touch the GND of CS10768F120P-C121 by one hand, the other hand operates on the capacitive touch screen. In this case, user's body acts as the Power System Ground.*

DB9 Connector
