

SNYPER-LTE Spectrum (EU)

4G/LTE, 3G/UMTS & 2G/GSM Network Signal Analyser with liveSCAN

General Description

The SNYPER-LTE Spectrum (EU) is a high performance, multi-language network signal analyser dedicated to surveying the 4G/LTE(EU), 3G/UMTS & 2G/GSM European networks.

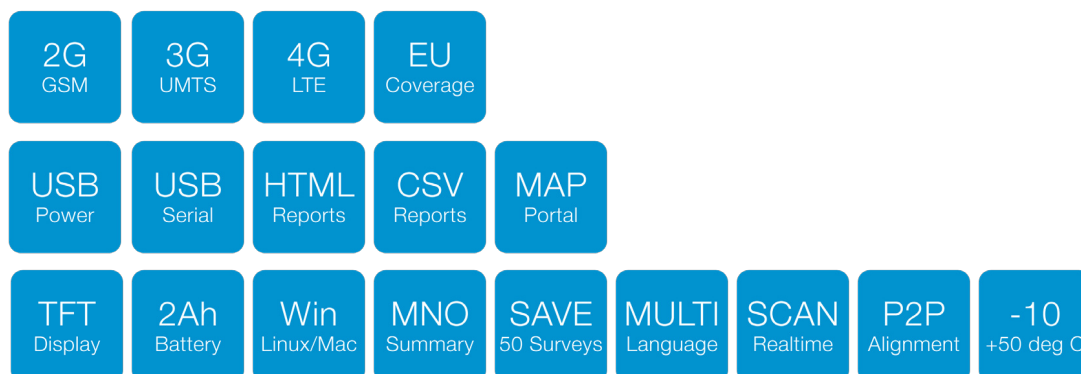

The SNYPER-LTE Spectrum (EU) can save multiple surveys locally in memory and incorporates Siretta's leading liveSCAN feature which allows you to perform real time graphical site surveys on the full colour SNYPER display.*

The SNYPER-LTE Spectrum is supplied with an omni-directional antenna to detect "hotspots" in buildings and perform site surveys and also includes a directional antenna kit to perform point-to-point antenna alignment.

The SNYPER can survey the local network and display results from all discovered cellular cell towers observed in the area. Results are ordered from highest to lowest "visible" base-station signal and the key network parameters of each are displayed.

**SNYPER-LTE Spectrum (EU) requires an active SIM to operate correctly*
