## Technical Note on Scroll Housings

18° EXPANSION, FOR REFERENCE ONLY

Forward Curved Wheels use 6° - 12° expansion, 10° normal  
Backward Curved Wheel normally uses 18° half scroll  
MODIFY TO SUIT YOUR NEEDS

REFERENCE ONLY BASED ON A 10 INCH DIAMETER WHEEL

ANGLE AROUND WHEEL FROM STARTING POINT  
(a half scroll housing expands for approx. 180 degrees)  
NOTE: Expansion angle must always increase.

## Hall Effect Monitor

Selected ebm blowers ordered with this option monitor the speed of the blower with a device consisting of a magnet and solid state switch built into the motor. The output signal is a low voltage DC pulse train that can be incorporated into the end product to trigger an audible or visual alarm or to initiate an orderly system shutdown. This device is suited for telecommunications, computer, peripheral and copier applications, or others as required.

## Hall Effect Monitor for AC Models

Input = 4.5 to 16 VDC;  $T = 60/\text{RPM}$ ;  $V_{\text{out}} \approx v$

Output Impedance = 4.7 K nominal.

## Hall Effect Monitor for Brushless DC Models

2 pulse / revolution –  $V_{\text{out}} \approx 5\text{v}$ ; Output current = 5mA max.

Type 8 = 2,8 x 0,5 mm 8

Type 7 = 2,8 x 0,8 mm 7  
Type 9 = 2,8 x 0,5 mm 9

## Characteristics of Fan Signals and Operation with different Alarm Signals

### Speed Sensor Type: S, /2, /12

These fans produce speed-proportional square-wave signals via an integrated sensor. This 'electronic' tachometer is used to monitor the fan speed.

### Alarm Signal Type: /10

These fans produce a continuous signal output when operating interference-free. When fan speed falls below 75 - 85% of the nominal speed, short low impulses are generated. The greater the fall below the alarm speed, the greater the low impulse width becomes. At rest there is a continuous low signal.

### Alarm Switching Signal Type: /5, /17

These fans produce speed-dependent, directly usable high/low square-wave signals via integrated alarm switching circuits.  
/5 models: Switching circuit is galvanically separated with a separate current supply.  
/17: Direct current supply via motor; the switching circuit is not separate.

## HOW TO USE CAPACITORS FOR MULTI-SPEED BLOWERS

It is possible to make any ebm blower with a PSC motor a multi-speed blower by adding a second or third capacitor on the load line (blue) at or near the value of the motor run capacitor. Actual capacitor value and RPM achieved are dependent on the nature of each application.
