EA DOGS102W-6 +
EA LED39x41-W

EA DOGS102W-6 +
EA LED39x41-A

TECHNICAL DATA

* HIGH-CONTRAST LCD SUPERTWIST DISPLAY (STN AND FSTN) WITH 10µm DOT GAP
* OPTIONAL LED BACKLIGHTS IN VARIOUS COLORS
* 102x64 PIXELS (CORRESPONDS TO 8x17 CHARACTERS OR 4x12 LARGE CHARACTERS)
* UC1701 CONTROLLER WITH SPI (4-WIRE) INTERFACE
* POWER SUPPLY: SINGLE SUPPLY 2.5V TO 3.3V (TYPICALLY 250µA)
* NO ADDITIONAL VOLTAGES REQUIRED
* OPERATING TEMPERATURE RANGE -20°C TO +70°C (STORAGE -30°C TO +80°C)
* LED BACKLIGHTING 5mA TO 80mA
* NO MOUNTING REQUIRED: SIMPLY SOLDER ONTO PCB

ORDERING CODE

GRAPHICS DISPLAY, 102x64, 39x41mm	**EA DOGS102x-6**

x: *W = white background (FSTN pos. transflective)*
  B = blue background (STN neg. transmissive)
  N = superwhite background (FSTN pos. reflective, cannot be backlit)

LED BACKLIGHT, WHITE	**EA LED39X41-W**
LED BACKLIGHT, AMBER	**EA LED39X41-A**
LED BACKLIGHT, DUO COLOR GREEN/RED	**EA LED39X41-GR**

ACCESSORIES

USB TEST BOARD FOR PC (WINDOWS 2000, XP, VISTA)	**EA 9780-4USB**
TOUCH PANEL, 4-WIRE, ANALOG, STICK-ON	**EA TOUCH102-1**
TOUCH PANEL, PCAP, STICK-ON	**EA TOUCH102-17C1**

10 CHARACTER SETS e.g. 6x8,8x8,8x16,CYRILLIC, FONT EDITOR	**EA USBSTICK-FONT**
SOCKET 4.8mm HEIGHT (2 pcs. ARE NECCESSARY)	**EA FL-14P**

PINOUT

The EA DOGS102, a 102x64-pixel graphics display, is a new addition to ELECTRONIC ASSEMBLY's EA DOG series. It, too, has pins that allow it to be mounted quickly and easily.

Pin	Symbol	Level	Function	Pin	Symbol	Level	Function
1	NC		(A1+: LED backlight)	15	VLCD	-	Power LC Drive
2	NC		(C1-: LED backlight)	16	VB1-	-	Voltage Converter
3				17	VB0-	-	Voltage Converter
4				18	VB0+	-	Voltage Converter
5				19	VB1+	-	Voltage Converter
6				20	VSS	L	Power Supply 0V (GND)
7				21	VSS	L	Power Supply 0V (GND)
8				22	VDD2/3	H	Power Supply +2,5..3,3V
9				23	VDD1	H	Power Supply +2,5..3,3V
10				24	SDA	H / L	Data in (SPI: MOSI)
11				25	SCK	H / L	Clock (SPI: CLK)
12				26	CD	H / L	L= Command, H= Data
13	NC		(C2-: LED backlight)	27	RST	L	Reset (active low)
14	NC		(A2+: LED backlight)	28	CS0	L	Chip Select (active low)

CONTRAST ADJUSTMENT

The contrast can be set by means of a command for all the displays in the EA DOG series. The contrast setting of the display must be set once by the software, and is then kept constant throughout the entire operating temperature range (-20..+70°C), thanks to the integrated temperature compensation.

3 DIFFERENT TECHNOLOGIES

See below for an overview of available technologies, combinations with available backlights and their usability:

display type	technology	optional backlight	readability	display color non backlighted	display color with backlighted	recommende backlight color
	FSTN pos. transflective	it's fine with and without backlight	readable even without backlight	black on white	black on backlight color	all
	STN neg. blue transmissive	usage only with backlight	---	---	white backlight on blue background	white
	FSTN pos. white reflective	no backlight possible	finest readable without backlight	black on white	---	---

LED-BACKLIGHT

3 different variants are available for individual backlighting: white, amber and a duo-color green/red version.

There are 2 separate LED paths available for each monochrome backlight that can be switched in parallel or in series to suit the system voltage. This means that most backlights can be run at either 3.3 V or a higher voltage.

To operate the backlight, we recommend a current source (e.g. CAT4238TD) or an external series resistor to limit the current. This can be calculated from R=U/I; you can find the values in the table on the right. To prolong the life of the backlights, we recommend that you use a current source.

The operating life of the amber and green/red backlights is 100,000 hours. The life of the white backlight is considerably shorter. We recommend that you dim these or switch them off whenever possible.

Important:

Do never connect the backlight LEDs directly to a 5 V/3.3 V supply as this will immediately destroy the LEDs. Always use a current source. Please note that derating applies at temperatures exceeding +25°C.
EA LED39x41-W
EA LED39x41-A   EA LED39x41-GR
amber EA LED39x41-A	Forward voltage	Current max.	Limiting resistor	
			@ 3,3 V	@ 5 V
Connected in parallel	2,2 V	80 mA	15 ohm	36 ohm
Connected in series	4,4 V	40 mA	CAT4238	15 ohm

white EA LED39x41-W	Forward voltage	Current max.	Limiting resistor	
			@ 3,3 V	@ 5 V
Connected in parallel	3,3 V	60 mA	0 ohm	28 ohm
Connected in series	6,6 V	30 mA	use CAT4238	

green/red EA LED39x41-GR	Forward voltage	Current max.	Limiting resistor	
			@ 3,3 V	@ 5 V
red path (ARG/CR)	1,9 V	60 mA	24 ohm	51 ohm
green path (ARG/CG)	2,0 V	80 mA	18 ohm	39 ohm
*EA LED39x41-A   Amber*   *EA LED39x41-W   White*   *EA LED39x41-GR   Green/Red*
If you see black and white pictures on this page but you want to see the colors of the displays, you can download a full-colored version of this document at http://www.lcd-module.de/eng/pdf/grafik/dogs102-6e.pdf

Page 3

APPLICATION EXAMPLE

3 additional capacitors are required for +2,5V..+3.3V operation.
Current consumption typ. 250µA
DATA TRANSFER

Data transfer is unidirectional. That means that data can only be written; it cannot be read again. In contrast to other displays, a busy query is not necessary with this display. The transmission follows SPI-mode 3, with MSB first.

The clock-pulse rate of the SCL line can be up to 33 MHz at 3.3V, depending on the supply voltage. You will find more detailed information on timing on page 41 of the datasheet of the UC1701x controller, which you will find on our website at http://www.lcd-module.de/eng/pdf/zubehoer/uc1701.pdf
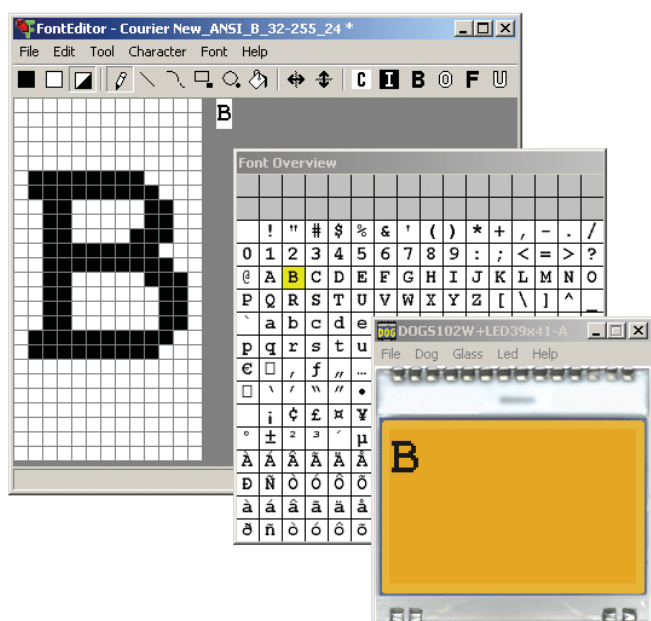

DOGS102-6 GRAPHIC

UC1701 PROGRAMMING COMMANDS

Command		CD	D7	D6	D5	D4	D3	D2	D1	D0	Function
(1)	Write Data Byte	1	data bit D[7..0]								Write one byte to memory
(4)	Set Column Address LSB	0	0	0	0	0	CA[3..0]				Set the SRAM column address CA=0..131

			TC	0	0	1	0	0	WC	WP	

CHARACTER SET AND FONT EDITOR (ACCESSORY)

With the ordering code EA USBSTICK-FONT a memory stick comes with various character sets, especially made for this small display EA DOGS102-6. An import function allows additionally to use Windows fonts. With the FontEditor it is easy to generate for example Cyrillic, Greek and Arabic fonts.

The preview function shows immediately the size and style in simulation window.

When the testboard EA 9780-2USB is connected to the USB port, you can see the character (or any predefined text) live on the display !

No need to say that the export function generates a C- and Basic source code as an include file to your software.

INITIALISATION EXAMPLE

Initialisation example (bottom view)												
Command		CD	D7	D6	D5	D4	D3	D2	D1	D0	Hex	Remark
(6)	Set Scroll Line	0	0	1	0	0	0	0	0	0	$40	Display start line 0
(13)	Set SEG direction	0	1	0	1	0	0	0	0	1	$A1	SEG reverse *)
(14)	Set COM direction	0	1	1	0	0	0	0	0	0	$C0	Normal COM0~COM63
(10)	Set All Pixel On	0	1	0	1	0	0	1	0	0	$A4	Disable -> Set All Pixel to ON
(11)	Set Inverse Display	0	1	0	1	0	0	1	1	0	$A6	Display inverse off
(17)	Set LCD Bias Ratio	0	1	0	1	0	0	0	1	0	$A2	Set Bias 1/9 (Duty 1/65)
(5)	Set Power Control	0	0	0	1	0	1	1	1	1	$2F	Booster, Regulator and Follower on
(8)	Set VLCD Resistor Ratio	0	0	0	1	0	0	1	1	1	$27	
(9)	Set Electronic Volume	0	1	0	0	0	0	0	0	1	$81	Set Contrast
			0	0	0	1	0	0	0	0	$10	
(25)	Set Adv. Program Control 0	0	1	1	1	1	1	0	1	0	$FA	Set Temperature compensation curve to -0.11%/°C
			1	0	0	1	0	0	0	0	$90	
(12)	Set Display Enable	0	1	0	1	0	1	1	1	1	$AF	Display on

*) Make sure that for 6:00 viewing direction SEG has to be set to „reverse" (mirrored layout) !

12:00 VIEWING ANGLE, TOP VIEW OPTION

If the display is read mostly from above (on the front of a laboratory power supply unit, for example), the preferred angle of viewing can be set to 12 o'clock. This rotaties the display by 180°. A slightly different initialization setup is required for this. Also keep in mind that the leftmost column (normally numbered as 0) will now change to 30.

Initialisation example (changes for top view)												
Command		CD	D7	D6	D5	D4	D3	D2	D1	D0	Hex	Remark
(13)	Set SEG direction	0	1	0	1	0	0	0	0	0	$A0	SEG normal
(14)	Set COM direction	0	1	1	0	0	1	0	0	0	$C8	COM reverse COM63~COM0

Orientation for 6 o'clock

USB-TEST BOARD EA 9780-4USB

For easy startup, a USB test board is available that can be connected to a PC. A USB cable and Windows software is supplied with the product. This allows text and images (BMP) to displayed directly on the connected display. You will find more information on the test board in the EA 9780-4USB data sheet.

SIMULATION WITH WINDOWS

A simulator window also displays the contents of the display. The software can simulate all the displays and colors even without the hardware. You can download the software free from our website. Note that all functions of the simulation software does run also without the USB board.
https://www.lcd-module.de/fileadmin/downloads/startdog_v46.zip

ZIF CONNECTOR EA WF100-04S

As an accessory for the touch panel we do provide a ZIF connector (4 pins) with pitch 1.0mm (SMD type). This connector is a „bottom side contact" type.

alle dimensions are in mm

Printing and typographical errors reserved.
DISPLAY VISIONS reserves the right to change specifications without prior notice.

Page 7

TOUCH PANEL EA TOUCH102-1 (OPTIONAL)

An analog touch panel is available as an accessory. It has a self-adhesive material on its rear surface and is simply stuck onto the display. The connection is made by means of a 4-pin flexible cable for a ZIF connector (e.g. EA WF100-04S) with a grid of 1.0 mm. Bending radius is defined with min. 5mm. For optimum readability we recommend that you use a backlight with the display.

Interfacing to a processor can be either done by an external touch panel controller or with a controller that is featured with analogue input. The touch panel is similar to a potentiometer: connecting a voltage of e.g. 3.3V to the pins *Top-Bottom* makes it possible to read out a voltage on pin *Left* or *Right* which is linear to the Y-coordinate of the pressed point. The X-coordinate will result when the voltage will be supplied to *Left-Right* and measurement is done at *Top* or *Bottom*.
Specification			
Specification	min	max	Unit
Top-Bottom	100	400	Ω
Left-Right	400	1000	Ω
Voltage		12	V
Current		25	mA
Linearity Error		1,5	%
Force	45	65	g

The pinout of the connecting cable is shown in the drawing. For connection there is a ZIF connector with pitch 1 mm, e.g. EA WF100-04S.
TOUCH PANEL EA TOUCH102-17C1 (PCAP, CAPACITIVE)

As an accessoriy we provide a suitable, capacitive touch panel (PCAP). It comes already with controller (GT5663) and integrated I²C bus. It supplies the coordinates in resolution 102x64 directly. The line INT shows, if data are available to be read out. The I²C bus address is 0xBA (0x5D). For connection there is a ZIF connector with pitch 1 mm, e.g. EA WF100-06S.

ATTENTION

handling precautions!

MOUNTING / ASSEMBLING

First, clip the display and backlight modules together by gently pushing the display pins through the corresponding holes on the backlight module. Then insert the entire module into the socket, or into the soldering holes on the pcb. The backlight pins (4 pins at the bottom) must be soldered on the top side as well to ensure good contact between the modules.

Important:

- The display and the backlight do have in summary 3 protective films. There are some on the top and the bottom of the display and also one on the backlight. These must be removed.
- LC displays are generally not suited for wave or reflow soldering. Temperatures of over 80°C can cause lasting damage.
- Make sure that either display nor backlight will never come into contact with any kind of liquid like Fluxer, Cleaner, Water.
