Hardware-encrypted for Data Security

Kingston IronKey™ Vault Privacy 50 series are premium USB Type-A and USB Type-C® drives that provide enterprise-grade security with FIPS 197 certified AES 256-bit hardware-encryption in XTS mode, including safeguards against BadUSB with digitally-signed firmware and against Brute Force password attacks. VP50 has been Penetration Tested (Pen Tested) for enterprise-grade security. Because it is encrypted storage under the user's physical control, VP50 series are superior to using the internet and Cloud services to safeguard data.

Vault Privacy 50 supports multi-password (Admin, User, and One-Time Recovery) option with Complex or Passphrase modes. This enhances the ability to recover access to the data if one of the passwords is forgotten. Traditional Complex mode allows for password from 6-16 characters using 3 out of 4 character sets. New passphrase mode allows for a numeric PIN, sentence, list of words, or even lyrics from 10 to 64 characters long. Admin can enable a User and a One-Time Recovery password, or reset the User password to restore data access.

To aid in password entry, the ‘eye’ symbol can be enabled to reveal the typed-in password, reducing typos leading to failed login attempts. Brute Force attack protection locks out User or One-Time Recovery passwords upon 10 invalid passwords entered in a row, and crypto-erases the drive if the Admin password is entered incorrectly 10 times in a row.

To protect against potential malware on untrusted systems, both Admin and User can set Read-Only mode to write-protect the drive; additionally, the built-in virtual keyboard shields passwords from keyloggers or screenloggers.

Organizations can customize and configure VP50 series drives with a Product ID (PID) for integration with standard Endpoint Management software to meet corporate IT and cybersecurity requirement through Kingston’s Customization Program.

Small and Medium Businesses can use the Admin role to locally manage their drives, e.g. use Admin to configure or reset employee User or One-Time Recovery passwords, recover data access on locked drives, and comply with laws and regulations when forensics are required.

Vault Privacy 50 offers fast dual channel performance on all capacities. The drive is waterproof with IPX8 rating³, TAA Compliant, and assembled in USA.

³ FIPS 197 Certified with XTS-AES 256-bit Encryption
³ Brute Force and BadUSB Attack Protection
³ Pen Tested for Enterprise-Grade Security
³ Multi-Password Option with Complex/New Passphrase Modes
³ Dual Read-Only (Write-Protect) Settings
³ Locally Manage Drives for Small and Medium Businesses

KINGSTON IRONKEY VAULT PRIVACY 50 SERIES

kingston.com/usb
Hardware-encrypted USB Drive for Data Protection — Safeguard important data with FIPS 197 certified XTS-AES 256-bit encryption. Built-in protections against BadUSB, Brute Force attacks, and Pen Tested for enterprise-grade security.

Multi-Password Option for Data Recovery — Enable Admin, User and One-Time Recovery passwords. Admin can reset a User password and create a One-Time recovery password to restore User’s access to data. Brute Force attack protection locks out User or One-Time Recovery passwords upon 10 invalid passwords entered in a row and crypto-erases the drive if the Admin password is entered incorrectly 10 times in a row.

New Passphrase Mode — Select between Complex or Passphrase password mode. Passphrases can be a numeric PIN, sentence with space characters, list of words or even lyrics – from 10 to 64 characters long.

Dual Read-Only (Write-Protect) Settings — Avoid malware attacks with a forced Read-Only mode set by Admin for User or a session-based Read-Only mode set by Admin or User.

Locally Manage Drives for Small and Medium Businesses — Use Admin role to locally manage employee User and One-Time Recovery passwords, recover data access on locked drives and comply with laws and regulations when forensics are required.

Additional Security Features — Reduce failed login attempts and frustration by enabling “eye” button to view password typed. Use virtual keyboard to shield password entry from keyloggers and screenloggers.
