

GENERAL DESCRIPTION

The **SP337E** is a dual mode serial transceiver containing both RS-232 and RS-485/422 line drivers and receivers. The RS-232 mode provides three drivers and five receivers to support all eight signals commonly used in the DB9 serial port connector (3TX/5RX). In RS-485 mode the device features two independent high speed RS-485/422 transmit and receive channels (2TX/2RX). The default RS-485 configuration is full-duplex, but half-duplex operation can be obtained by tying together the TX and RI pins, and the TXEN and RXEN signals.

The **SP337E** is pin compatible to MaxLinear's SP334.

The **SP337EB** features a maximum data rate of 250kbps in RS-232 mode and a maximum data rate of 15Mbps in RS-485. However, the **SP337EU** features a maximum data rate of 1Mbps in RS-232 mode and a maximum data rate of 15Mbps in RS-485 mode.

The **MaxLinear**-patented high efficiency charge pumps (5,306,954) deliver true RS-232 driver output voltages from a single power supply from 3.3V to 5V. Charge pump outputs are self-monitored to minimize power consumption. The **SP337E** requires only four 0.1μF capacitors for complete functionality.

All RS-485 receivers or transceivers feature high impedance inputs which allow up to 256 transceivers on a single shared bus. When configured in RS-485 mode, each driver may be individually enabled or put into tri-state, simplifying use on shared buses or for bidirectional communication. The RS-485/422 drivers can be disabled (high-Z output) by the TXEN enable pin. The RS-232 receiver outputs can be disabled by the RXEN enable pin.

All receivers have advanced failsafe protection to prevent oscillation when inputs are un-connected. In RS-232 mode, each receiver input has a 5kΩ pull-down to ground. in RS-485 mode, receivers will default to output logic 1 if inputs are floating, shorted, or open but terminated.

All driver outputs and receiver inputs are protected against ESD strikes up to ±15,000 volts.

FEATURES

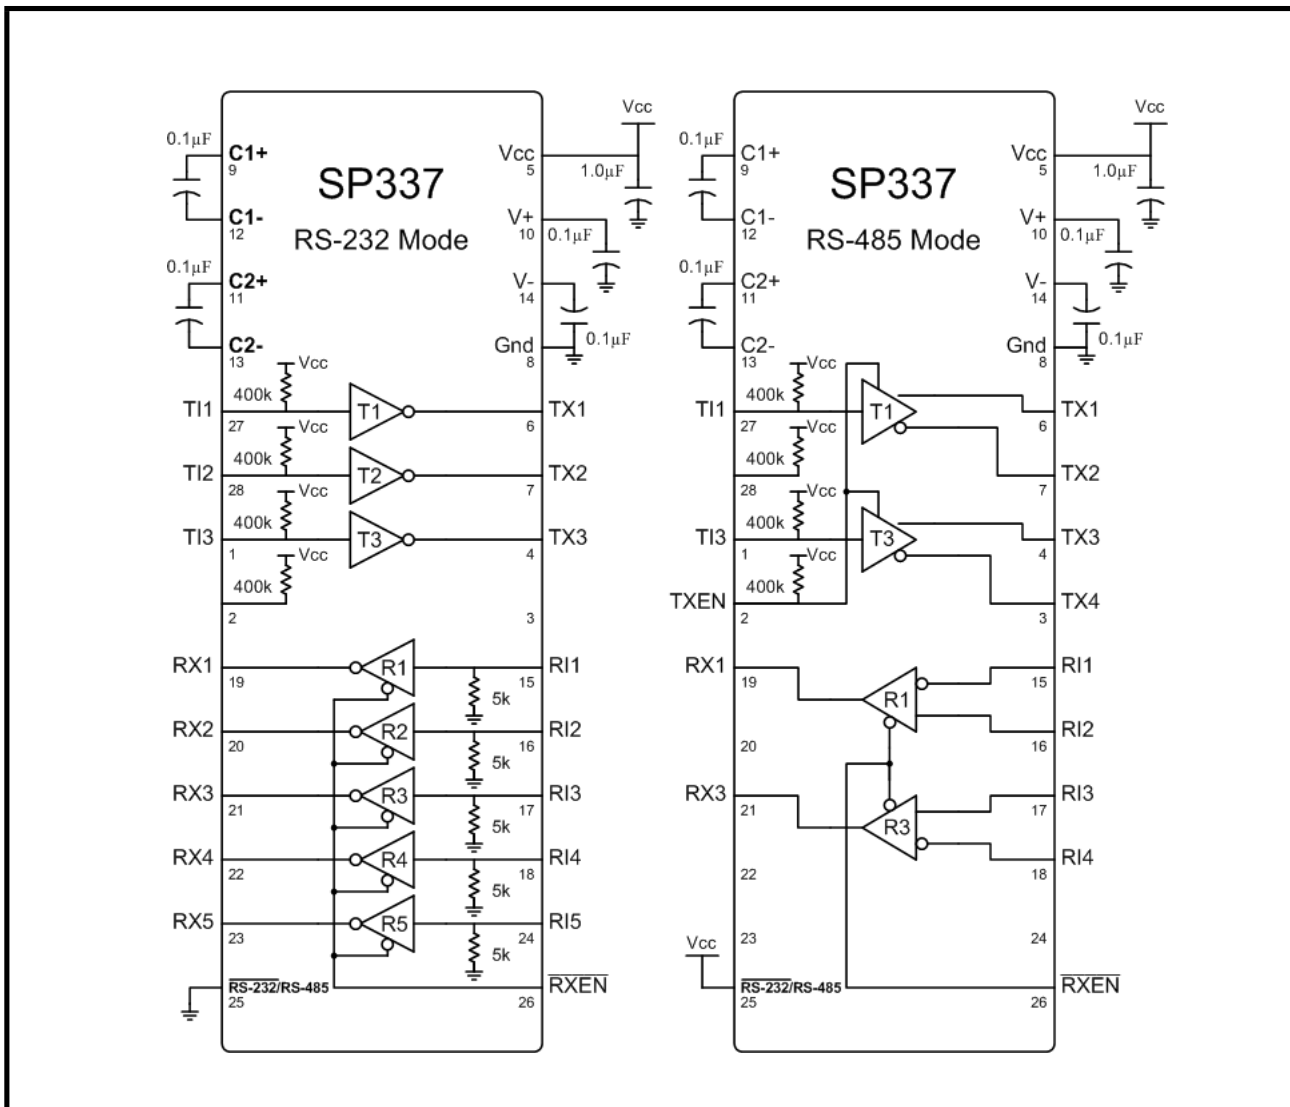

- 3.3V to 5V Single Supply Operation
- Robust ±15kV ESD Protection
 - Human Body Model
- Max Data Rate of 15Mbps in RS-485 mode and up to 1Mbps in RS-232 mode (SP337EU)
- 3 Drivers, 5 Receivers RS-232/V.28
- 2 Drivers, 2 Receivers RS-485/RS-422
 - Full-Duplex Configuration
 - 1/8th Unit Load, up to 256 receivers on bus
- RS-485 Advanced Failsafe on Open, Short or Terminated Lines
- Full Differential Driver Tri-State (Hi-Z) Control
- Receiver Output Tri-State Control
- TSSOP-28 Package

TYPICAL APPLICATIONS

- Dual Protocol Serial Ports (RS-232 or RS-485)
- Industrial Computers
- Industrial and Process Control Equipment
- Point-Of-Sales Equipment
- Networking Equipment
- HVAC Controls Equipment
- Building Security Equipment

* Pins marked with an X in the above table are ignored or "don't care" in the listed mode, provided they do not exceed V_{CC} or go below ground. Some of these pins have a pull-up to V_{CC} which remains active in both RS-232 and RS-485 mode, but is disabled in the SP337EU shutdown mode.

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections to the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability and cause permanent damage to the device.

CAUTION:

ESD (Electrostatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

REVISION HISTORY

| DATE | REVISION | DESCRIPTION |
|---------------|----------|--|
| December 2010 | 1.0.0 | Production Release. |
| December 2010 | 1.0.1 | Update ESD Information. |
| March 2011 | 1.0.2 | Correct Figure 1 RS-485 driver type error. |
| March 2018 | 1.0.3 | Clarify test conditions for Driver Output Leakage Current on page 7. Corrected power off impedance unit. Update to MaxLinear logo. Update format and Ordering Information. Moved ESD ratings / protection to Absolute Maximum Ratings section. |
| July 5, 2021 | 2.0.0 | Add missing units for RS-232 driver propagation delays and ESD protection ratings for IEC61000-4-2. Update SP337EB 250kbps conditions, and RS-485 / RS-422 shutdown n to driver / receiver output valid timing according to the changes outlined in PCN 20006. Update ordering information and remove obsolete WSOIC version references. |
